STATISTICAL RELEASE

P2041

Mining: Production and sales (Preliminary)

August 2021

Please note that the revision of weights for mining production has been postponed. The timing of the new weights will be communicated on Stats SA's Publication Schedule on www.statssa.gov.za

Embargoed until:
12 October 2021
11:30

ENQUIRIES:
Juan-Pierre Terblanche
Tel: 072 901 1222

FORTHCOMING ISSUE:
September 2021

EXPECTED RELEASE DATE:
11 November 2021

Production: results for August 2021

Table A – Key growth rates in the volume of mining production

	Mar-21	Apr-21	May-21	Jun-21	Jul-21	Aug-21
Year-on-year % change, unadjusted	22,4	117,4	21,9	22,9	12,3	2,0
Month-on-month % change, seasonally adjusted	4,3	0,2	-3,5	1,4	3,2	-2,4
3-month % change, seasonally adjusted ¹	3,8	6,7	5,7	1,6	0,0	0,4

¹ Percentage change between the previous three months and the three months ending in the month indicated.

Mining production increased by 2,0% year-on-year in August 2021. The largest positive contributors were:

- gold (17,0% and contributing 2,0 percentage points);
- iron ore (22,9% and contributing 1,9 percentage points); and
- PGMs (4,4% and contributing 1,0 percentage point).

Coal (-8,5% and contributing -2,2 percentage points) was a significant negative contributor – see Tables 6 and 7.

Seasonally adjusted mining production decreased by 2,4% in August 2021 compared with July 2021. This followed month-on-month changes of 3,2% in July 2021 and 1,4% in June 2021.

Table B – Seasonally adjusted index of the volume of mining production for the latest three months by mineral group and mineral (Base: 2015=100)

Mineral group and mineral	Weight	Mar – May 2021	Jun – Aug 2021	% change between Mar – May 2021 and Jun – Aug 2021	Contribution (% points) to the % change in total mining production
Gold	16,81	78,4	75,4	-3,8	-0,5
Iron ore	10,76	94,9	101,0	6,4	0,7
Chromium ore	3,93	119,7	125,2	4,6	0,2
Copper ¹	0,81	38,8	31,6	-18,6	-0,1
Manganese ore ²	5,20	176,9	195,5	10,5	1,0
PGMs	22,43	104,3	101,9	-2,3	-0,5
Nickel ²	1,36	57,2	53,8	-5,9	0,0
Other metallic minerals ¹	2,26	132,6	104,8	-21,0	-0,6
Diamonds ²	3,51	107,6	122,9	14,2	0,5
Coal	25,00	94,2	92,7	-1,6	-0,4
Building materials	2,13	90,2	83,6	-7,3	-0,1
Other non-metallic minerals ¹	5,80	102,8	108,3	5,4	0,3
Total	100,00	100,0	100,4	0,4	0,4

¹ Adjusted for calendar effects only. See notes 4, 5 and 6 on page 11.

² Unadjusted.

Seasonally adjusted mining production increased by 0,4% in the three months ended August 2021 compared with the previous three months. The largest positive contributors were:

- manganese ore (10,5% and contributing 1,0 percentage point);
- iron ore (6,4% and contributing 0,7 of a percentage point); and
- diamonds (14,2% and contributing 0,5 of a percentage point) – see Table B.

Figure 1 – Volume of mining production (Base: 2015=100)

Figure 2 – Volume of mining production (Base: 2015=100): year-on-year percentage change

Sales: results for August 2021

Table C – Key growth rates in mineral sales at current prices

	Mar-21	Apr-21	May-21	Jun-21	Jul-21	Aug-21
Year-on-year % change, unadjusted	50,1	151,1	88,2	94,4	35,0	35,1
Month-on-month % change, seasonally adjusted	16,9	2,6	-3,4	1,0	-10,5	11,5
3-month % change, seasonally adjusted ¹	20,4	17,9	19,4	8,3	0,2	-4,0

¹ Percentage change between the previous three months and the three months ending in the month indicated.

Mineral sales at current prices increased by 35,1% year-on-year in August 2021. The largest positive contributors were:

- PGMs (55,1% and contributing 18,9 percentage points);
- gold (52,5% and contributing 7,5 percentage points);
- coal (23,9% and contributing 4,5 percentage points); and
- iron ore (15,0% and contributing 2,2 percentage points) – see Tables 12 and 13.

Seasonally adjusted mineral sales at current prices increased by 11,5% in August 2021 compared with July 2021. This followed month-on-month changes of -10,5% in July 2021 and 1,0% in June 2021.

In the three months ended August 2021 the seasonally adjusted value of mineral sales at current prices was 4,0% lower compared with the previous three months.

Survey information

Introduction	1	Statistics South Africa (Stats SA) publishes monthly mining production indices and mineral sales based on the information furnished by the Department of Mineral Resources and Energy (DMRE). Data in this release are presented by mineral group and mineral.
	2	In accordance with international practice, the indices are usually re-based every five years to a new base year. The current base year of the index of the volume of mining production is 2015=100. Both actual and seasonally adjusted figures are presented.
	3	The value of mineral sales is calculated, in general, on a free-on-rail/free-on-board basis.
	4	In order to improve timeliness, some information for the current month had to be estimated due to late response. These estimates will be revised in future statistical release(s) as soon as more up-to-date information is available.
Purpose of the survey	5	The monthly mining production and sales survey is conducted by the DMRE, covering all mining establishments operating in the South African economy. The results of this survey are used to calculate the volume of mining production indices in order to estimate the gross domestic product (GDP) and its components, which in turn are used to develop and monitor government policy.
Scope of the survey	6	This survey covers mining establishments conducting activities regarding the extracting, dressing and beneficiating of minerals occurring naturally, for example solids such as coal and ores.
Classification	7	The 1993 edition of the <i>Standard Industrial Classification of all Economic Activities</i> (SIC), Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 <i>International Standard Industrial Classification of all Economic Activities</i> (ISIC) with suitable adaptations for local conditions. Each statistical unit is classified to an industry which reflects the predominant activity of the establishment. Statistics in this publication are presented by mineral group and mineral.
Statistical unit	8	The statistical unit for the collection of information is the mining establishment. An establishment is the smallest economic unit that functions as a separate entity.
Rounding-off of figures	9	The figures in the tables have, where necessary, been rounded off to the nearest digit shown. There may, therefore, be slight discrepancies between the sums of the constituent items and the totals shown.
Historical data and past publications	10	Historical mining data and past publications are available on the Stats SA website. Click on the following link (Time series data) or (Past publications) to access the data and releases electronically. Annual averages and annual percentage changes are available on the following link: Annual data

Technical notes

Index of the volume of mining production	1	The index of the volume of mining production, also known as the production index, is a statistical measure of the change in the volume of production. The production index of a mineral group is the ratio between the volume of production of a mineral group in a given period and the volume of production of the same mineral group in the base period. The current base period is 2015. The production in the base period is set at 100.
Index weighting	2	The weight of a mineral group is the ratio of its value added to the total value added of the mining industry. The weight of a mineral group reflects the importance of the mineral group in the total mining industry. The weights change over time due to quality improvements and changes in relative prices. New weights will be calculated annually.
	3	The weights, which are used to aggregate minerals to mineral groups and mineral groups to total mining, are derived from national accounts value added data. The latest weights (implemented in the August 2020 publication) are based on an average of value added data for the years 2016, 2017 and 2018. These weights are applicable from January 2018.
Seasonal adjustment	4	Seasonally adjusted estimates are generated each month using the X-12-ARIMA Seasonal Adjustment Program developed by the US Bureau of the Census, 1968. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be recognised more clearly. Seasonal adjustment does not aim to remove irregular or non-seasonal influences which may be present in any particular month.
	5	Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series even after adjustment for seasonal variations. This means the month-to-month movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour. The X-12-ARIMA procedure for mining production and sales is described in more detail on the Stats SA website at: Click to download seasonal adjustment for mining production and sales
		Note: Owing to the impact of the COVID-19 lockdown, a transitory change adjustment was applied to April 2020. Transitory (temporary) change describes a temporary effect on the level of a series after a certain point in time. The methodology will be reviewed as more data points are added to the time series.
Calendar effects	6	These are effects due to calendar variations. Such calendar effects include the number of working/trading days in a week, moving holidays such as Easter and the length of month (some months have more days than others).
Trend cycle	7	The trend is the long-term pattern or movement of a time series. The X-12-ARIMA Seasonal Adjustment Program is used for smoothing seasonally adjusted estimates to estimate the underlying trend cycle.
Reliability of estimates	8	Figures for the latest 2 calendar years are preliminary.
Month-on-month percentage change	9	The month-on-month percentage change in a variable for any given month is the change between that month and the previous month, expressed as a percentage of the latter.
Year-on-year percentage change	10	The year-on-year percentage change in a variable for any given period is the change between that period and the corresponding period of the previous year, expressed as a percentage of the latter.
Index contribution (percentage points)	11	The contribution (percentage points) of a mineral group or mineral to the percentage change in the total mining production for a given period is calculated by multiplying the difference in the index for each mineral group or mineral by

the weight of the mineral group or mineral and then dividing by the previous period's total index.

Sales contribution (percentage points) 12 The contribution (percentage points) to the percentage change in total sales for a given period is calculated by multiplying the percentage change of each mineral group or mineral with its percentage contribution to total mineral sales of the previous period, divided by 100.

Glossary

Free-on-rail	Free-on-rail relates to goods sold on the local market where no railage or road transport costs are involved.																
Free-on-board	Free-on-board relates to goods destined for the export market. Railage, road transport and docking charges are involved but no charges are made for transport by sea.																
Industry	An industry consists of a group of establishments engaged in the same or similar kinds of economic activity. Industries are defined in the <i>System of National Accounts (SNA)</i> in the same way as in the <i>Standard Industrial Classification of all Economic Activities (SIC)</i> , Fifth Edition of January 1993.																
PGMs – Platinum group metals	Platinum group metals include platinum, iridium, osmiridium, palladium, rhodium, ruthenium and osmium.																
Sales	Sales are the total value of sales of primary minerals at the first point of saleability by the mining establishment.

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Advance release calendar

An advance release calendar is disseminated on www.statssa.gov.za

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
Eastern Cape Library Services, Qonce
Central Regional Library, Polokwane
Central Reference Library, Mbombela
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data is available via online services. For more detail about our electronic services, contact Stats SA's user information service.

You can visit us on the internet at: www.statssa.gov.za
