

Statistical release

P3043

Manufacturing: Utilisation of production capacity by large enterprises (Preliminary)

February 2015

**Embargoed until:
7 May 2015
11:30**

This is the first publication presenting utilisation rates with 2012 weights based on the 2012 national accounts value added results. Previously, the manufacturing divisions and total manufacturing utilisation rates were calculated using weights based on the 2011 national accounts value added results.

Enquiries:

Nicolai Claassen
Tel: (012) 310 8249

Forthcoming issue:

May 2015

Expected release date:

6 August 2015

Key results for February 2015

Table A – Utilisation and under-utilisation of production capacity in the manufacturing industry

Estimates		February 2014 (%)	November 2014 (%)	February 2015 (%)	Percentage point difference between February 2014 and February 2015
			1/	1/	
Utilisation of production capacity		80,6	82,7	80,2	-0,4
Under-utilisation of production capacity		19,4	17,3	19,8	0,4
Reasons for under-utilisation:	Shortage of raw materials	1,8	1,9	1,9	0,1
	Shortage of labour	1,5	1,4	1,4	-0,1
	Insufficient demand	11,8	10,0	11,9	0,1
	Other reasons	4,3	4,0	4,6	0,3

1/ Preliminary.

The utilisation of production capacity by large manufacturers was 80,2% in February 2015 compared with 80,6% in February 2014, a decrease of 0,4 of a percentage point.

The increase in under-utilisation of 0,4 of a percentage point between February 2014 and February 2015 can mainly be attributed to an increase in 'other reasons' (such as downtime due to maintenance and changes in productivity) (contributing 0,3 of a percentage point) – see Table A.

Figure 1 – Utilisation of production capacity in the manufacturing industry

Table B – Utilisation of production capacity in the manufacturing industry by division

Manufacturing divisions	Weights 2012	February 2014 (%) 1/ 2/	February 2015 (%) 1/ 2/	Percentage point difference between February 2014 and February 2015
Food and beverages	24,44	81,6	82,1	0,5
Textiles, clothing, leather and footwear	3,17	75,9	76,7	0,8
Wood and wood products, paper, publishing and printing	12,65	81,6	81,4	-0,2
Petroleum, chemical products, rubber and plastic products	22,13	82,1	81,4	-0,7
Glass and non-metallic mineral products	3,91	80,8	76,9	-3,9
Basic iron and steel, non-ferrous metal products, metal products and machinery	19,59	79,2	78,5	-0,7
Electrical machinery	1,70	80,3	78,1	-2,2
Radio, television and communication apparatus and professional equipment	1,41	84,8	83,0	-1,8
Motor vehicles, parts and accessories and other transport equipment	7,39	79,3	81,5	2,2
Furniture and other manufacturing	3,61	78,4	75,9	-2,5
Total manufacturing	100	80,6	80,2	-0,4

1/ Preliminary.

2/ The weighted total of utilisation is the sum of the rate of utilisation per division multiplied by its weight in 2012, divided by 100. There might be a slight discrepancy with the total shown in Table B due to rounding off.

Seven of the ten manufacturing divisions showed decreases in utilisation of production capacity in February 2015 compared with February 2014. The largest decreases were recorded in the following divisions:

- glass and non-metallic mineral products (-3,9 percentage points);
- furniture and 'other' manufacturing (-2,5 percentage points);
- electrical machinery (-2,2 percentage points); and
- radio, television and communication apparatus and professional equipment (-1,8 percentage points).

The following divisions showed rates of utilisation of production capacity above 80% for February 2015:

- radio, television and communication apparatus and professional equipment (83,0%);
- food and beverages (82,1%);
- motor vehicles, parts and accessories and other transport equipment (81,5%);
- wood and wood products, paper, publishing and printing (81,4%); and
- petroleum, chemical products, rubber and plastic products (81,4%) – see Table B.

Statistician-General

Note – Reweighting of utilisation of production capacity

Introduction

Statistics South Africa (Stats SA) conducts a three-monthly survey of the utilisation of production capacity in the manufacturing industry covering large manufacturing enterprises. This statistical release contains monthly utilisation rates according to the survey. The results of the manufacturing percentages of utilisation of production capacity published today contain changes related to reweighting.

Reweighting

New weights for the manufacturing groups and divisions were calculated based on the national accounts value added weights for 2012. Previously, the weights were calculated from the national accounts value added weights for 2011. The new and old weights are shown in Table C below and in more detail in Table E on page 23. The new weights have been applied to the rates of utilisation of production capacity starting from February 2012. In 2016, the rates of utilisation of production capacity will be reweighted based on the 2013 national accounts value added weights.

The impact of reweighting the rate of utilisation of production capacity is illustrated in Tables C and D and Figure 2.

Table C – Comparison of utilisation of production capacity in 2014, based on weights of 2011 and 2012

Manufacturing divisions	Weights 2011	Weights 2012	Utilisation rates 2014		Difference in results (% points)
			Using 2011 weights (%) ^{1/}	Using 2012 weights (%) ^{1/}	
Food and beverages	23,82	24,44	82,5	82,7	0,2
Textiles, clothing, leather and footwear	2,92	3,17	75,7	75,8	0,1
Wood and wood products, paper, publishing and printing	9,46	12,65	81,9	82,5	0,6
Petroleum, chemical products, rubber and plastic products	22,52	22,13	82,4	82,0	-0,4
Glass and non-metallic mineral products	4,42	3,91	80,6	80,6	0,0
Basic iron and steel, non-ferrous metal products, metal products and machinery	20,40	19,59	78,7	78,9	0,2
Electrical machinery	2,37	1,70	80,6	80,1	-0,5
Radio, television and communication apparatus and professional equipment	1,45	1,41	85,2	85,6	0,4
Motor vehicles, parts and accessories and other transport equipment	8,58	7,39	81,5	81,2	-0,3
Furniture and other manufacturing	4,06	3,61	81,6	80,9	-0,7
Total manufacturing	100	100	81,2	81,1	-0,1

^{1/} The weighted total of utilisation is the sum of the rate of utilisation per division multiplied by its weight in the base year (2011 or 2012 respectively), divided by 100. There might be a slight discrepancy with the total shown in Table C due to rounding off.

Table D – Annual percentage point difference in the rate of utilisation of production capacity based on 2011 and 2012 weights

Manufacturing divisions	2011 weights			2012 weights		
	2012	2013	2014	2012	2013	2014
Food and beverages	0,7	-0,2	0,0	0,9	-0,3	0,1
Textiles, clothing, leather and footwear	0,9	0,5	-1,9	0,8	0,6	-1,8
Wood and wood products, paper, publishing and printing	1,3	-0,6	-1,0	1,5	-0,4	-0,8
Petroleum, chemical products, rubber and plastic products	2,7	-1,2	-0,1	2,7	-1,6	-0,1
Glass and non-metallic mineral products	-0,2	1,7	0,2	-0,3	1,8	0,2
Basic iron and steel, non-ferrous metal and metal products and machinery	0,4	0,5	-0,4	0,9	0,4	-0,6
Electrical machinery	-1,5	0,8	-1,2	-2,0	0,9	-1,3
Radio, television and communication apparatus and professional equipment	3,1	-0,4	1,8	3,3	-0,3	1,9
Motor vehicles, parts and accessories and other transport equipment	4,0	-2,1	-0,4	3,4	-1,9	-0,3
Furniture and other manufacturing	-1,1	0,0	-0,6	-1,6	-0,2	-0,6
Total manufacturing	1,3	-0,4	-0,3	1,3	-0,5	-0,3

Figure 2 – Comparison of total manufacturing utilisation rates based on 2011 and 2012 weights

Explanatory notes

Introduction	1	This statistical release contains information regarding utilisation of production capacity, total under-utilisation and reasons for under-utilisation by division and major group within manufacturing, on a three-monthly basis. Statistics South Africa (Stats SA) conducts the survey of utilisation of production capacity by large enterprises mainly engaged in the manufacturing industry.
	2	Stats SA is continuously updating its Business Register, based on the value added tax (VAT) database obtained from the South African Revenue Service (SARS).
Purpose of the survey	3	The results of the quarterly manufacturing utilisation of production capacity survey are used to assess the degree of capacity constraint experienced in the manufacturing industry. The information in this release is a key component in the Composite Coincident Business Cycle Indicator and is used to analyse movements in gross fixed capital formation in the national accounts.
Scope of the survey	4	This survey covers large manufacturing enterprises, i.e. those with turnover greater than R100 million per annum and conducting activities in - - the manufacturing, processing, making or packing of products; - the slaughtering of animals, including poultry; and - installation, assembly, completion, repair and related work.
Classification	5	The 1993 edition of the <i>Standard Industrial Classification of all Economic Activities</i> (SIC), Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 <i>International Standard Industrial Classification of all Economic Activities</i> (ISIC) with suitable adaptations for local conditions. Each enterprise is classified to an industry which reflects its predominant activity.
Collection rate	6	The preliminary collection rate for the survey on manufacturing: utilisation of production capacity by large enterprises for February 2015 was 80,5%. Improved collection rate for November 2014 was 80,8%.
Survey methodology and design	7	The survey is collected by fax and telephone for four months per year, namely February, May, August and November. Questionnaires are sent to a sample of approximately 980 enterprises. Completed questionnaires are required to be returned to Stats SA within 10 days after the end of the reference month. Fax and telephone reminders are used to follow up non-respondents
Sample design	8	There is no probability sampling involved in this survey. The rate of utilisation of production capacity is obtained three-monthly from a population of approximately 980 large enterprises (those with VAT turnover greater than R100 million per annum), which is a subset of a population of approximately 45 130 manufacturing enterprises. The population is classified to major group at the SIC three-digit level.
Weighting methodology	9	The weights for aggregating the utilisation rate of manufacturing major groups to divisions and divisions to total manufacturing were calculated on the basis of the value added data obtained from the 2012 national accounts value added weights. The under-utilisation of each major group in a division is multiplied by the applicable weight and aggregated to reflect the under-utilisation of the division. The under-utilisation of total manufacturing is calculated by weighting the under-utilisation of the divisions. The reasons for under-utilisation are weighted according to the relative importance of the reasons furnished by the respondents. If the respondent gives three reasons for under-utilisation, the weight of the most important reason is 0,5; the weight of the second-most important reason is 0,33 and the weight of the least important reason is 0,17.

The percentage under-utilisation of the most important reason is 0,5 multiplied by the total under-utilisation reported by the respective respondent. The percentage under-utilisation of the second-most important reason and least important reason are calculated in the same way.

The total under-utilisation per reason within a major group is calculated by adding the weighted under-utilisation reported by each respondent per reason per major group. The total under-utilisation per reason per division is calculated by weighting the under-utilisation per group in the division. The under-utilisation per reason of total manufacturing is calculated by weighting the under-utilisation rate of the divisions. The weighting factors for aggregating the under-utilisation rate per reason of manufacturing major groups to divisions and divisions to total manufacturing were calculated per reason on the basis of the value added data obtained from the 2012 national accounts value added weights.

A weight is calculated for each enterprise based on the total sales of the enterprise compared with the total sales of enterprises classified in the major group.

Reliability of estimates

- 10 Data presented in this publication are based on information obtained from a partial coverage collection of only the large enterprises in manufacturing, and therefore may differ from the figures that would have been produced if the data had also been obtained from a representative sample of smaller enterprises in manufacturing.
- 11 Within the defined coverage, inaccuracies may occur because of imperfections in reporting by enterprises and errors made in the collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to minimise non-sampling errors by careful design of questionnaires, testing them in pilot studies, editing reported data and implementing efficient operating procedures. Fluctuations may occur in consecutive observations as a result of seasonal and economic factors.

Revised figures

- 12 Revised figures in this issue are due to late submissions of data to Stats SA, or to respondents reporting revisions or corrections to their figures. Preliminary figures are indicated in the relevant tables. Data are edited at the enterprise level.

Related publications

- 13 Users may also wish to refer to the following publications available from Stats SA:
- *Bulletin of Statistics* issued quarterly; and
 - *South African Statistics* issued annually.

Reference period

- 14 The reference period is one month, and the survey is collected for the months of February, May, August and November.

Rounding-off of figures

- 15 Where necessary, the figures in the tables have been rounded off to the nearest digit shown. There may therefore be slight discrepancies between the sums of the constituent items and the totals shown.

Glossary

Enterprise	An enterprise is a legal entity or a combination of legal entities that includes and directly controls all functions necessary to carry out its production activities.
Industry	An industry is made up of enterprises engaged in the same or similar kinds of economic activity. Industries are defined in the <i>System of National Accounts</i> (SNA) in the same way as in the <i>Standard Industrial Classification of all Economic Activities</i> , (SIC) Fifth Edition, Report No. 09-90-02 of January 1993.
Output	Output is the aggregate value of goods manufactured and work done and includes: • sales and transfers-out of own manufactures, factory waste and stocks of factored goods; • repairs; • installation, erection and assembly; • sundry trading revenue; • sales of factored goods minus purchases of factored goods; • rent and leasing received; • royalties received; • difference between opening value and closing value of work in progress, stocks of own manufactures and stock of factored goods; • head office charges; and • other revenue Output excludes excise and customs duty paid.
Statistical unit	A statistical unit is a unit about which statistics are tabulated, compiled or published. The statistical units are derived from and linked to the South African Revenue Service (SARS) administrative data.
Skilled employees	Skilled employees are persons who have undergone training or education in and/or outside their work environment and who are in possession of a minimum level of secondary qualification to qualify for their occupation. Employees in this category must have undergone at least two years study or training after having completed Grade 12.
Semi-skilled employees	Semi-skilled employees are persons who acquired their expertise through a relatively short training period (single days or weeks) after which the required tasks should be efficiently performed. They must possess basic literacy and numeracy prior to training, but primary education is sufficient as a prerequisite for training.
Unskilled employees	Unskilled employees are persons who have not undergone any formal training or of whom no minimum level of education is required.
‘Other’ reasons for under-utilisation	Other reasons include reasons such as downtime due to maintenance, changes in productivity and seasonal factors.
Percentage utilisation of production capacity	The percentage utilisation of production capacity in the manufacturing industry is a measure of the use of manpower, plant and machinery in manufacturing.
Percentage under-utilisation of production capacity	The percentage under-utilisation of production capacity is calculated by deducting the percentage utilisation of production capacity from a hundred.

Value added

Value added is the value of output less intermediate consumption. It represents the value added to the cost of the materials used in the process of production.

Turnover

Turnover refers to:

- the value of sales and transfers out of all own manufactured products/articles;
- amounts received for work done; and
- amounts received for services rendered.

Turnover excludes:

- value added tax (VAT);
- export freight charges; and
- excise duty.

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data: and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Advanced release calendar

An advanced release calendar is disseminated on www.statssa.gov.za

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
Eastern Cape Library Services, King William's Town
Central Regional Library, Polokwane
Central Reference Library, Mbombela
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data is available via online services. For more detail about our electronic services, contact Stats SA's user information service at (012) 310 8600.
