

## STATISTICAL RELEASE

### P4141

# Electricity generated and available for distribution (Preliminary)

November 2017

Embargoed until:  
4 January 2018  
13:00

ENQUIRIES:  
Nicolai Claassen  
(012) 310 8007

FORTHCOMING ISSUE:  
December 2017

EXPECTED RELEASE DATE:  
1 February 2018

## Electricity generated (produced) in South Africa: results for November 2017

**Table A – Key growth rates in the volume of electricity generated**

	Jun-17	Jul-17	Aug-17	Sep-17	Oct-17	Nov-17
Year-on-year % change, unadjusted	1,6	-1,8	0,8	1,1	1,3	1,7
Month-on-month % change, seasonally adjusted	-3,1	-1,4	1,4	-0,1	0,8	0,9
3-month % change, seasonally adjusted <sup>1</sup>	2,3	1,1	-1,5	-1,7	-0,4	1,2

<sup>1</sup> Percentage change between the previous 3 months and the 3 months ending in the month indicated.

Electricity generation (production) increased by 1,7% year-on-year in November 2017. Seasonally adjusted electricity generation increased by 0,9% in November 2017 compared with October 2017. This followed month-on-month changes of 0,8% in October 2017 and -0,1% in September 2017. Seasonally adjusted electricity generation increased by 1,2% in the three months ended November 2017 compared with the previous three months.

**Figure 1 – Electricity generated in South Africa**

Gigawatt-hours

## Electricity distributed (consumed) in South Africa: results for November 2017

**Table B – Key growth rates in the volume of electricity distributed**

	Jun-17	Jul-17	Aug-17	Sep-17	Oct-17	Nov-17
Year-on-year % change, unadjusted	1,6	-1,5	1,6	0,2	0,0	0,9
Month-on-month % change, seasonally adjusted	-3,1	-1,0	1,3	-0,9	0,9	0,5
3-month % change, seasonally adjusted <sup>1</sup>	1,5	0,2	-2,0	-1,9	-0,7	0,4

<sup>1</sup> Percentage change between the previous 3 months and the 3 months ending in the month indicated.

Electricity distribution (consumption) increased by 0,9% year-on-year in November 2017. Seasonally adjusted electricity distribution increased by 0,5% month-on-month in November 2017, following month-on-month changes of 0,9% in October 2017 and -0,9% in September 2017. Seasonally adjusted electricity distribution increased by 0,4% in the three months ended November 2017 compared with the previous three months.

## Survey information

<b>Introduction</b>	<p>1 Statistics South Africa (Stats SA) conducts a monthly survey covering electricity undertakings and establishments (branches) in the electricity industry. This statistical release contains monthly information regarding the volume of electricity units:</p> <ul style="list-style-type: none"> <li>• generated and distributed in South Africa;</li> <li>• flowing into and out from South Africa as measured by the metering systems at the South African borders; and</li> <li>• delivered to provinces.</li> </ul> <p>Both unadjusted and seasonally adjusted figures are published.</p> <p>2 In accordance with international practice, the indices are usually re-based every five years to a new base year. The current base period of the index is 2015.</p> <p>3 Some information for the current month may have been estimated due to late submission by respondents. These estimates will be revised in the next statistical release(s) as soon as actual information is available.</p>
<b>Purpose of the survey</b>	<p>4 The results of the monthly electricity survey are used to compile estimates of the gross domestic product (GDP) and its components, which are used in monitoring the state of the economy and formulation of economic policy.</p>
<b>Scope of the survey</b>	<p>5 This survey covers electricity undertakings and establishments conducting activities concerned with the generation and/or distribution of electricity (excluding the distribution of purchased electric energy). It includes electrical power installations, which, as subsidiary divisions of undertakings, produce electricity for regular use by these undertakings.</p>
<b>Classification</b>	<p>6 The 1993 edition of the <i>Standard Industrial Classification of all Economic Activities</i> (SIC), Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 <i>International Standard Industrial Classification of all Economic Activities</i> (ISIC) with suitable adaptations for local conditions. Each statistical unit is classified to an industry which reflects the predominant activity of the electricity undertaking or establishment.</p>
<b>Collection rate</b>	<p>7 The collection rate for the survey on electricity generated and available for distribution for November 2017 was 96%. The collection rate for October 2017 was 100%.</p>
<b>Statistical unit</b>	<p>8 The statistical unit for the collection of information is the electricity undertaking or establishment. The electricity undertaking or establishment is the smallest economic unit that functions as a separate entity (see point 5).</p>
<b>Revised figures</b>	<p>9 Normally revised figures are due to:</p> <ul style="list-style-type: none"> <li>• late submission of data to Stats SA; and</li> <li>• revisions or corrections by respondents to previous reported data.</li> </ul> <p>Data are edited at enterprise level.</p>
<b>Rounding-off of figures</b>	<p>10 Where figures have been rounded off, discrepancies may occur between sums of the component items and the totals.</p>
<b>Historical data</b>	<p>11 Historical electricity data are available on the Stats SA webpage. Click on the following link (<a href="#">Time series data</a>) to access the data electronically</p>
<b>Past publications</b>	<p>12 Past electricity releases are available on the Stats SA webpage. Click on the following link (<a href="#">Past publications</a>) to access the releases electronically.</p>

## Technical notes

<b>Survey methodology and design</b>	1	All statistical units are stratified by type of economic activity according to the <i>Standard Industrial Classification of all Economic Activities</i> (SIC) and measure of size, where measure of size is the volume of electricity generated by the electricity undertaking or establishment. All large undertakings or establishments (size group one) are completely enumerated. A sample is drawn from medium and small size undertakings and establishments by systematically selecting undertakings or establishments within each size category. An electricity undertaking or establishment with a total generating capacity of less than 500 kilowatts is excluded from the sample.
	2	The survey is conducted by electronic filing, email, fax and telephone. Information is collected from a sample of 24 electricity undertakings or establishments. As from September 2013, Eskom supplied additional data for independent power producers (IPPs) that were not in the original sample of 24 establishments.
<b>Monthly index of electricity generated</b>	3	The calculation of the monthly index of electricity generated is based on the volume of electricity units produced.
<b>Benchmarking</b>	4	<p>The index of the volume of electricity generated should provide an accurate reflection of the trend of activities of the relevant industry. The level of activities, as measured by the monthly electricity survey, is based on information received from a sample of electricity undertakings and establishments. These levels are weighted according to the original sample and designed to represent the population of electricity undertakings and establishments.</p> <p>The results of the 1995 Census of electricity, gas and steam served as a benchmark to verify or adjust the level of the monthly index of the volume of electricity generated collected through the monthly survey. The level adjustments were done on the volume index for July of the relevant census year (the 1995 census year covered the period 1 January to 31 December 1995 and therefore, the benchmarking was done using the index of July 1995 as reference point).</p>
<b>Seasonal adjustment</b>	5	<p>Seasonally adjusted estimates of all items are generated each month, using the X-12-ARIMA Seasonal Adjustment Program developed by US Bureau of the Census Economic Research and Analyses Division, 1968. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognized. Seasonal adjustment does not aim to remove irregular or non-seasonal influences, which may be present in any particular month. Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series even after adjustment for seasonal variations. This means the month-to-month movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour. The X12-ARIMA procedure for electricity generated and available for distribution is described in more detail on the Stats SA website at <a href="#">Click to download Electricity seasonal adjustment September 2017</a></p>
<b>Trend cycle</b>	6	The trend is the long-term pattern or movement of a time series. The X-12-ARIMA Seasonal Adjustment Program is used for smoothing seasonally adjusted estimates to estimate the underlying trend cycle.
<b>Month-on-month percentage change</b>	7	The month-on-month percentage change in a variable for any given month is the change between that month and the previous month, expressed as a percentage of the latter.
<b>Year-on-year percentage change</b>	8	The year-on-year percentage change in a variable for any given period is the change between that period and the corresponding period of the previous year, expressed as a percentage of the latter.

## Glossary

<b>Electricity undertaking</b>	An undertaking concerned with the generation and distribution of electricity, including electrical power installations, which, as subsidiary divisions of undertakings, produce electricity for regular use by these undertakings.	
<b>Index of the volume of electricity generated</b>	A statistical measure of the change in the volume of electricity generated in a given period and the volume of electricity generated in the base period. The base period is 2015. The production in the base period is set at 100.	
<b>Industry</b>	An industry is made up of enterprises engaged in the same or similar kinds of economic activity. Industries are defined in the System of National Accounts (SNA) in the same way as in the <i>Standard Industrial Classification of all Economic Activities</i> (SIC), Fifth Edition, Report No. 09-90-02 of January 1993.	
<b>Inflow into SA</b>	Electricity flowing into South Africa as measured by the metering systems at the South African borders.	
<b>Outflow from SA</b>	Electricity flowing from South Africa as measured by the metering systems at the South African borders.	
<b>Unit of electricity</b>	One gigawatt-hour of electricity is equal to one million kilowatt-hours. A kilowatt-hour is the basic unit of electrical energy equal to one kilowatt of power supplied to or taken from an electric circuit steadily for one hour. One kilowatt-hour equals one thousand watt-hours.	
<b>Symbols and abbreviations</b>	GDP	Gross domestic product
	GWh	Gigawatt-hour
	ISIC	International Standard Industrial Classification
	SIC	Standard Industrial Classification of all Economic Activities
	SA	South Africa
	Stats SA	Statistics South Africa
	*	Revised figures

<b>Nicolai Claassen</b>	Telephone number: (012) 310 8007 Email: nicolaic@statssa.gov.za

## General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

## Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division  
National Library of South Africa, Cape Town Division  
Natal Society Library, Pietermaritzburg  
Library of Parliament, Cape Town  
Bloemfontein Public Library  
Johannesburg Public Library  
Eastern Cape Library Services, King William's Town  
Central Regional Library, Polokwane  
Central Reference Library, Mbombela  
Central Reference Collection, Kimberley  
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

## Electronic services

A large range of data is available via online services. For more details about our electronic data services, contact Stats SA's user information service at (012) 310 8600.

You can visit us on the internet at: [www.statssa.gov.za](http://www.statssa.gov.za)
