Statistical release P6410

Tourist accommodation (Preliminary)

July 2015

The results published today are based on a new sample. This is an annual procedure which typically affects the levels of tourist accommodation statistics. To avoid breaks in time series and to preserve historical growth rates, historical levels were revised (i.e. they were linked to the estimates based on the new sample).

Embargoed until: 21 September 2015 10:00

Results for July 2015

	Feb-15	Mar-15	Apr-15	May-15	Jun-15	Jul-15
Stay units available	1,1	1,4	1,9	0,8	1,0	0,9
Stay unit nights sold	-3,7	1,3	1,4	0,9	-1,2	1,4
Average income per stay unit night sold	9,0	8,7	7,4	8,0	6,6	7,0
Income from accommodation	5,0	10,1	8,9	9,0	5,3	8,5
Total income 1/	4,5	8,0	8,1	8,0	4,0	8,1

Table A – Year-on-year percentage change in tourist accommodation statistics (income at current prices)

1/ Includes restaurant and bar sales and 'other' income.

Measured in nominal terms (current prices), total income for the tourist accommodation industry increased by 8,1% in July 2015 compared with July 2014.

Income from accommodation increased by 8,5% year-on-year in July 2015, the result of a 1,4% increase in the number of stay unit nights sold and a 7,0% increase in the average income per stay unit night sold.

Table B –	Year-on-year percentage change in income from accommodation at current prices by type of
	accommodation

Type of accommodation	Feb-15	Mar-15	Apr-15	May-15	Jun-15	Jul-15
Hotels	6,6	11,9	8,9	9,7	5,2	9,4
Caravan parks and camping sites	25,6	18,6	19,3	1,0	5,8	7,1
Guest-houses and guest-farms	4,2	8,6	-0,9	11,3	7,8	9,9
Other accommodation	0,6	6,0	11,0	7,0	4,9	6,3
Total income from accommodation 1/	5,0	10,1	8,9	9,0	5,3	8,5

1/ Excludes restaurant and bar sales and 'other' income.

In July 2015, the types of accommodation that recorded the highest year-on-year growth rates in income from accommodation were guest-houses and guest-farms (9,9%) and hotels (9,4%) – see Table B.

The main contributors to the 8,5% year-on-year increase in income from accommodation in July 2015 were hotels (contributing 5,9 percentage points) and 'other' accommodation (contributing 1,9 percentage points) – see Table 3.

Table C - Income from accommodation at current prices for the latest three months by type of accommodation

3

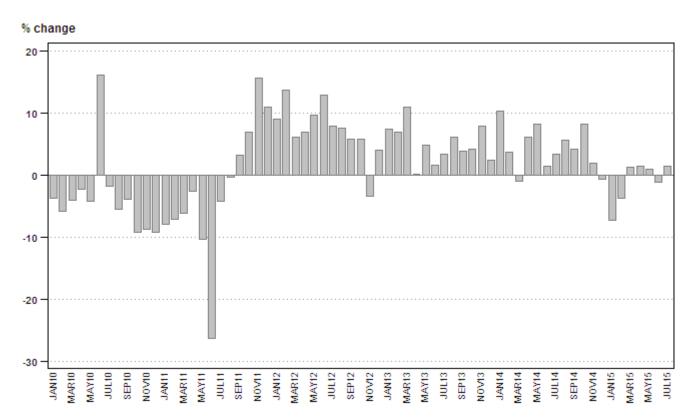

Type of accommodation	May – Jul 2014 (R million)	Weight	May – Jul 2015 (R million)	% change between May – Jul 2014 and May – Jul 2015	Contribution (% points) to the total % change
Hotels	2 538,0	64,6	2 745,4	8,2	5,3
Caravan parks and camping sites	33,2	0,8	34,8	4,8	0,0
Guest-houses and guest-farms	250,2	6,4	274,5	9,7	0,6
Other accommodation	1 106,7	28,2	1 174,5	6,1	1,7
Total income from accommodation 1/	3 928,1	100,0	4 229,2	7,7	7,7

1/ Excludes restaurant and bar sales and 'other' income.

Income from accommodation increased by 7,7% in the three months ended July 2015 compared with the three months ended July 2014. The main contributors to this increase were:

- hotels (8,2% and contributing 5,3 percentage points); and •
- 'other' accommodation (6,1% and contributing 1,7 percentage points) see Table C. •

PJ Lehohla Statistician-General

Business register and samples

Today Statistics South Africa (Stats SA) publishes results for the monthly survey of tourist accommodation from a new sample drawn in April 2015, which replaces the previous sample that was drawn in April 2014. The sample was drawn from a business register of enterprises with an annual turnover of at least R372 965 and that are required to register with the South African Revenue Service (SARS) for value added tax.

Owing to the evolving nature of business, the business register is maintained on a continuous basis. The maintenance process is aimed, amongst other things, at capturing changes related to new businesses, ceased businesses, merged businesses and classification changes. In addition, Stats SA undertakes quality improvement surveys related to the business register, the primary objective of which is to capture up-to-date information about the structures and activities of large and complex businesses. This process enables Stats SA to review classification codes for these businesses. These changes are an essential part of the statistical architecture.

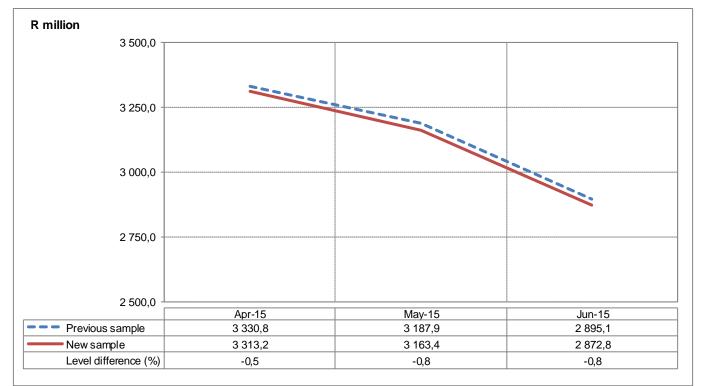

Comparison between the previous and new samples for the tourist accommodation industry

The reported level of total income for the monthly survey of tourist accommodation for the months April to June 2015 based on the new sample was 0,7% lower than the level of total income from the previous sample (see Table D and Figure 2). This is a result of the replacement of the sample which was drawn in April 2014 that was operational for the last half of 2014 and the first half of 2015.

Tourist accommodation industry	Previous sample	New sample	Difference	Difference (%)
Stay units available (000) (average)	120,6	120,0	-0,6	-0,5
Income from accommodation (R million)	4 264,7	4 299,0	34,3	0,8
Total income for the accommodation industry (R million) 1/	9 413,8	9 349,4	-64,4	-0,7

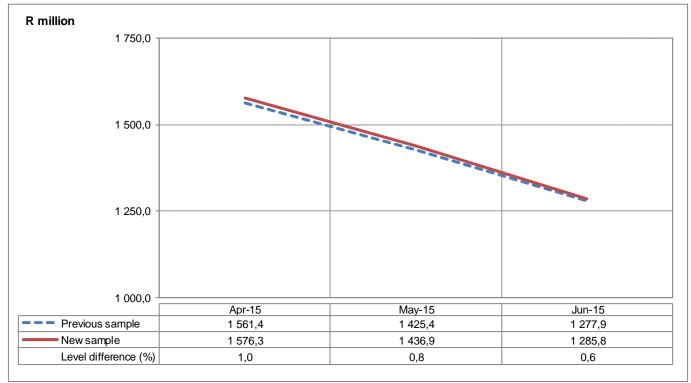

1/ Includes restaurant and bar sales and 'other' income.

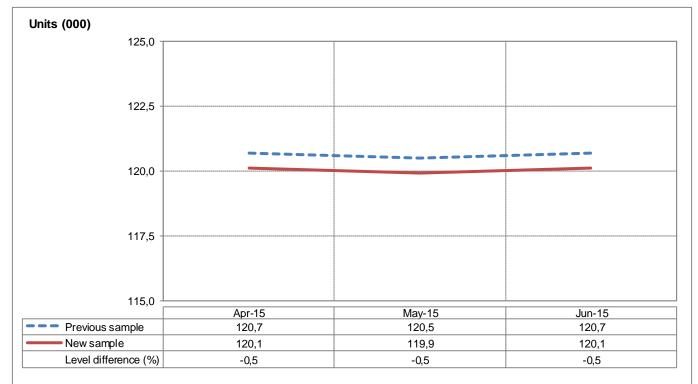

The reported level of income from accommodation for the months April to June 2015 based on the new sample was 0,8% higher than the level of income from accommodation from the previous sample (see Table D on page 4 and Figure 3).

The reported level of stay units available for the months April to June 2015 based on the new sample was 0,5% lower than the level of stay units available from the previous sample (see Table D on page 4 and Figure 4).

Figure 4 – Stay units available: monthly levels for previous and new samples for April to June 2015

Type of accommodation	Previous sample (R million)	New sample (R million)	Difference (R million)	Difference (%) 1/
Hotels	7 428,9	7 438,4	9,5	0,1
Caravan parks and camping sites	48,7	44,9	-3,8	-7,8
Guest-houses and guest-farms	344,4	368,4	24,0	7,0
Other accommodation	1 591,8	1 497,7	-94,1	-5,9
Total income 2/	9 413,8	9 349,4	-64,4	-0,7

Table E – Total income for the previous and new samples by type of accommodation for April to June 2015

1/ The percentage difference is the new sample minus the previous sample, divided by the previous sample, multiplied by 100.

2/ Includes restaurant and bar sales and 'other' income.

The largest percentage differences were in the following types of accommodation:

- caravan parks and camping sites (7,8% or R3,8 million lower in the new sample);
- 'other' accommodation (5,9% or R94,1 million lower in the new sample); and
- guest-houses and guest-farms (7,0% or R24,0 million higher in the new sample).

Table F – Total income for the previous and new samples by type of income for April to June 2015

Type of income	Previous sample (R million)	New sample (R million)	Difference (R million)	Difference (%) 1/
Income from accommodation	4 264,7	4 299,0	34,3	0,8
Income from restaurant and bar sales	1 426,0	1 405,2	-20,8	-1,5
Other income	3 723,1	3 645,2	-77,9	-2,1
Total income	9 413,8	9 349,4	-64,4	-0,7

1/ The percentage difference is the new sample minus the previous sample, divided by the previous sample, multiplied by 100.

The largest percentage difference by type of income was 'other' income (2,1% or R77,9 million lower in the new sample).

Backcasting

To avoid breaks in the time series and to preserve historical growth rates, historical sales levels were revised (i.e. they were linked to the estimates based on the new sample).

Tables

Note that income from accommodation excludes restaurant and bar sales and 'other' income.

Table 5 – Year-on-year percentage change in tourist accommodation statistics by type of accommodation (income at current prices)

Survey informati	on	
Introduction	1	The results presented in this publication are derived from the monthly survey of the tourist accommodation industry. This survey is based on a sample drawn from the 2015 business sampling frame (BSF) that contains businesses registered for value added tax (VAT).
	2	In order to improve timeliness, some information for the latest month had to be estimated due to late response. These estimates will be revised in future statistical releases as soon as information becomes available.
Purpose of the survey	3	The Tourist accommodation survey is a monthly survey covering a sample of public and private enterprises involved in the short-stay accommodation industry in South Africa.
		The results of the survey are used to compile estimates of the tourism satellite accounts (TSA) and the gross domestic product (GDP) and its components, which are used to develop and monitor government policy. These statistics are also used in the analysis of comparative business and industry performance.
Scope of the survey	4	This survey covers the following tax registered private and public enterprises that are mainly engaged in providing short-stay commercial accommodation:
		 Hotels, motels, botels and inns; Caravan parks and camping sites; Guest-houses and guest-farms; and 'Other' accommodation.
Collection rate	5	The preliminary collection rate for the tourist accommodation survey for July 2015 was 91,6%. The collection rate for June 2015 for the new sample was 95,3%.
Classification by industry	6	The 1993 edition of the <i>Standard Industrial Classification of all Economic Activities</i> (SIC), Fifth Edition, Report No. 09-09-02 was used to classify the statistical units in the survey. The SIC is based on the 1990 <i>International Standard Industrial Classification of all Economic Activities</i> (ISIC) with suitable adaptations for local conditions. Each enterprise is classified to an industry, which reflects its predominant activity. Statistics in this publication are presented at 5-digit SIC level.
Statistical unit	7	The statistical units for the collection of the information are enterprises and establishments.
Revised figures	8	Revised figures are mainly due to late submission of data to Stats SA, or respondents reporting revisions or corrections to their figures. Preliminary figures, as indicated in the relevant tables, are subject to change and when revised will not be indicated as such. Data are edited at the enterprise level.
Rounding-off of figures	9	Where figures have been rounded off, discrepancies may occur between sums of the component items and the totals.
Historical data	10	Historical tourist accommodation data are available on the Stats SA website. To access the data electronically, use the following link: http://www.statssa.gov.za/?page_id=1849
Past publications	11	Past tourist accommodation releases are available on the Stats SA website. To access the releases electronically, use the following link: http://www.statssa.gov.za/?page_id=1866&PPN=P6410&SCH=5703

Comparability 12 with discontinued Hotels' Trading Statistics	The information in this statistical release and the discontinued monthly Hotels' Trading Statistics statistical release is not strictly comparable. The Hotels' Trading Statistics survey was conducted using a list of all hotels graded by the then South African Tourism Board (Satour) when the grading of hotels was still compulsory by law. This survey is conducted from a sample drawn from a business register of all enterprises registered for value added tax (VAT) and income tax.
---------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

The higher levels from this survey can be mainly attributed to the following:

- The coverage of all types of tourist accommodation enterprises including hotels; and
- The improved coverage of the business register, especially of small and micro enterprises.

Technical notes

Survey 1		The survey was conducted by mail, email, fax and telephone.
----------	--	-------------------------------------------------------------

- methodology and design The 2015 sample of 1 000 enterprises was drawn from a population of 3 885 enterprises using stratified simple random sampling. The enterprises were first stratified at 5-digit level according to the SIC and then by size of enterprises. All large enterprises are completely enumerated. Turnover was used as the measure of size for stratification.
- **Size groups** 2 The enterprises are divided into four size groups according to turnover. All large and medium enterprises (size group one and two) are completely enumerated. Simple random sampling is applied to size groups three and four (small and very small) enterprises. The total income of the large and medium enterprises (size group one and two) is added to the weighted totals of size groups three and four to reflect the total income.

Measure of size classes (Rand)

Enterprise size	Size group	Lower limits	Upper limits
Very small	4	372 965	5 100 000
Small	3	5 100 001	6 000 000
Medium	2	6 000 001	13 000 000
Large	1	13 000 001	

- Sample weighting
 3 For those strata not completely enumerated, the weights to produce estimates are the inverse ratio of the sampling fraction, modified to take account of non-response in the survey. Stratum estimates are calculated and then aggregated with the completely enumerated stratum to form subgroup estimates. These procedures are in line with international best practice.
- **Reliability of estimates 4** Data presented in this publication are based on information obtained from a sample and are, therefore, subject to sampling variability; that is, they may differ from the figures that would have been produced if the data had been obtained from all enterprises in the tourist accommodation industry in South Africa.

Relative standard error	5	One measure of the likely difference is given by the standard error (SE), which indicates the extent to which an estimate might have varied by chance because only a sample of enterprises was used. The relative standard error (RSE) provides an immediate indication of the percentage errors likely to have occurred due to sampling, and thus avoids the need to refer to the size of the estimate. Table F – Estimates of total industry income by type of enterprise within 95% confidence limits – July 2015					
			Lower limit (R million)	Estimate (R million)	Upper limit (R million)	Relative standard error (RSE) %	
		Total income	3 094,0	3 241,6	3 389,0	2,3	
Non-sampling errors	6	Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in the collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to minimise non-sampling errors by careful design of questionnaires, testing them in pilot studies, editing reported data and implementing efficient operating procedures. Non-sampling errors occur in both sample surveys and censuses.					
Year-on-year percentage change	7	The year-on-year percentage change in a variable for any given period is the change between that period and the corresponding period of the previous year, expressed as a percentage of the latter.					
Contribution (percentage points)	8	The contribution (percentage points) to the year-on-year percentage change for any given period is calculated by multiplying the percentage change of each type of accommodation by its corresponding weight, divided by 100. The weight is the percentage contribution of each type accommodation to the total accommodation income in the corresponding period of the previous year.					
Seasonal adjustment	9	Seasonally adjusted estimates will not be published until there are sufficient data points for this survey. As soon as sufficient data points are available, Stats SA will consider publishing seasonally adjusted estimates.

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

14

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division National Library of South Africa, Cape Town Division Natal Society Library, Pietermaritzburg Library of Parliament, Cape Town Bloemfontein Public Library Johannesburg Public Library Eastern Cape Library Services, King William's Town Central Regional Library, Polokwane Central Reference Library, Mbombela Central Reference Collection, Kimberley Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data are available via online services. For more details about our electronic data services, contact Stats SA's user information service at (012) 310 8600.
