

STATISTICAL RELEASE P7162

Land transport (Preliminary)

July 2018

The results published today are based on a new sample. This is an annual procedure which typically affects the levels of payload, passenger journeys and income at current prices. To avoid breaks in time series and to minimise revisions to historical growth rates, historical levels were revised (i.e. they were linked to the estimates based on the new sample).

Freight transportation: results for July 2018

Table A – Year-on-year percentage change in freight transportation (income at current prices)

| | Feb-18 | Mar-18 | Apr-18 | May-18 | Jun-18 | Jul-18 |
|-----------------|--------|--------|--------|--------|--------|--------|
| Freight payload | 12,2 | 7,4 | 6,6 | 1,1 | -5,1 | 4,8 |
| Freight income | 12,6 | 8,9 | 8,8 | 4,3 | -2,6 | 3,0 |

The volume of goods transported (payload) increased by 4,8% in July 2018 compared with July 2017. The corresponding income increased by 3,0% over the same period.

Table B - Freight transportation income at current prices for the latest three months by type of commodity

| Type of commodity | May – Jul 2017 (R million) | Weight | May – Jul 2018 (R million) | % change between May – Jul 2017 and May – Jul 2018 | Contribution (% points) to the total % change |
|--|----------------------------------|--------|----------------------------------|--|--|
| Agriculture and forestry primary products | 3 496 | 8,9 | 3 368 | -3,7 | -0,3 |
| Primary mining and quarrying products | 13 459 | 34,1 | 13 900 | 3,3 | 1,1 |
| Manufactured food, beverages and tobacco products | 5 960 | 15,1 | 5 377 | -9,8 | -1,5 |
| Textiles, clothing and leather goods | 724 | 1,8 | 733 | 1,2 | 0,0 |
| Chemicals, coke, petroleum, rubber, plastic and other mineral products | 3 352 | 8,5 | 3 216 | -4,1 | -0,3 |
| Basic metals and fabricated metal products | 1 452 | 3,7 | 1 558 | 7,3 | 0,3 |
| Non-metallic products | 945 | 2,4 | 945 | 0,0 | 0,0 |
| Electrical machinery, transport machinery and equipment | 563 | 1,4 | 575 | 2,1 | 0,0 |
| Motor vehicles, parts and accessories | 753 | 1,9 | 907 | 20,5 | 0,4 |
| Paper and paper products | 338 | 0,9 | 347 | 2,7 | 0,0 |
| Commercial products | 736 | 1,9 | 771 | 4,8 | 0,1 |
| Used household and office products | 761 | 1,9 | 800 | 5,1 | 0,1 |
| Containers | 1 771 | 4,5 | 2 023 | 14,2 | 0,6 |
| Parcels | 624 | 1,6 | 669 | 7,2 | 0,1 |
| Other freight | 4 556 | 11,5 | 4 883 | 7,2 | 0,8 |
| Total income | 39 494 | 100,0 | 40 073 | 1,5 | 1,5 |

Income from freight transportation increased by 1,5% in the three months ended July 2018 compared with the three months ended July 2017. The main contributor to this increase was primary mining and quarrying products (3,3% and contributing 1,1 percentage points) – see Table B.

Figure 1 - Freight transportation: year-on-year percentage change in payload

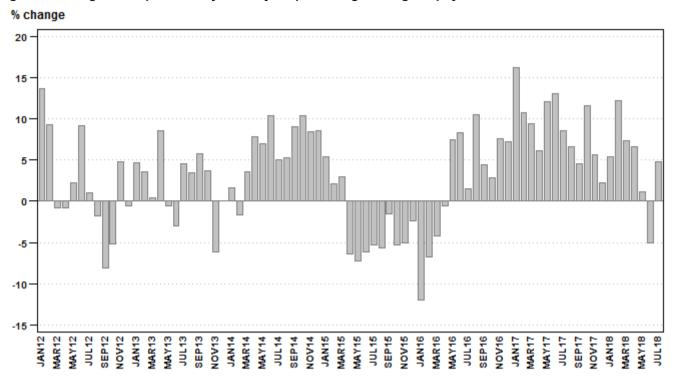

Table C - Seasonally adjusted payload for the latest three months by type of transport

| Payload | Feb – Apr 2018 (000 tons) | Weight | May – Jul 2018 (000 tons) | % change between Feb – Apr 2018 and May – Jul 2018 | Contribution (% points) to the total % change |
|---------|---------------------------------|--------|---------------------------------|--|--|
| Rail | 56 342 | 23,5 | 54 456 | -3,3 | -0,8 |
| Road | 183 569 | 76,5 | 179 586 | -2,2 | -1,7 |
| Total | 239 910 | 100,0 | 234 043 | -2,4 | -2,4 |

Seasonally adjusted payload decreased by 2,4% in the three months ended July 2018 compared with the previous three months. Road freight decreased by 2,2% (contributing -1,7 percentage points) while rail freight decreased by 3,3% (contributing -0,8 of a percentage point) – see Table C.

Passenger transportation: results for July 2018

Table D – Year-on-year percentage change in passenger transportation (income at current prices)

| | Feb-18 | Mar-18 | Apr-18 | May-18 | Jun-18 | Jul-18 |
|--------------------|--------|--------|--------|--------|--------|--------|
| Passenger journeys | -14,5 | -18,5 | -5,0 | -25,1 | -13,6 | 7,2 |
| Passenger income | -4,8 | -6,2 | -7,0 | -18,1 | -0,6 | 1,7 |

The number of passenger journeys increased by 7,2% in July 2018 compared with July 2017. The corresponding income increased by 1,7% over the same period.

Figure 2 - Passenger transportation: year-on-year percentage change in passenger journeys

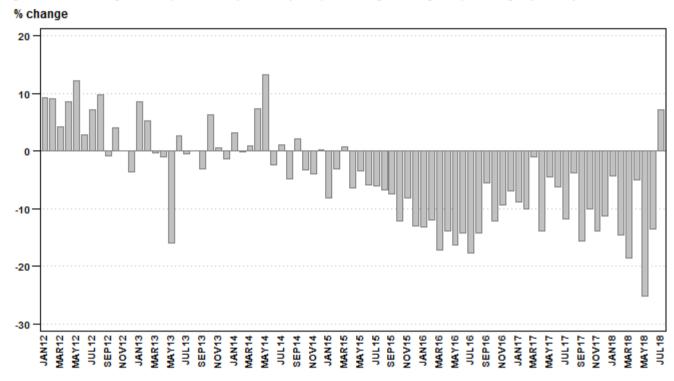

Table E - Seasonally adjusted passenger journeys for the latest three months by type of transport

| Passenger journeys | Feb – Apr 2018 (000) | Weight | May – Jul 2018 (000) | % change between Feb – Apr 2018 and May – Jul 2018 | Contribution (% points) to the total % change |
|--------------------|----------------------------|--------|----------------------------|--|--|
| Rail | 66 317 | 46,7 | 67 093 | 1,2 | 0,6 |
| Road | 75 651 | 53,3 | 72 312 | -4,4 | -2,3 |
| Total | 141 969 | 100,0 | 139 404 | -1,8 | -1,8 |

Seasonally adjusted passenger journeys decreased by 1,8% in the three months ended July 2018 compared with the previous three months. Road passenger journeys decreased by 4,4% (contributing -2,3 percentage points) while rail passenger journeys increased by 1,2% (contributing 0,6 of a percentage point) – see Table E.

Note: Changes to the monthly current indicator survey and the impact on the statistical series

Business register and samples

Today Statistics South Africa (Stats SA) publishes results for the monthly survey of land transport from a new sample drawn in April 2018, which replaces the previous sample that was drawn in April 2017. The sample was drawn from a business register of enterprises with an annual turnover of at least R1 081 402 and that are required to register with the South African Revenue Service for value added tax.

Owing to the evolving nature of business, the business register is maintained on a continuous basis. The maintenance process is aimed, amongst other things, at capturing changes related to new businesses, ceased businesses, merged businesses and classification changes. In addition, Stats SA undertakes quality improvement surveys related to the business register, the primary objective of which is to capture up-to-date information about the structures and activities of large and complex businesses. This process enables Stats SA to review classification codes for these businesses. These changes are an essential part of the statistical architecture.

Comparison between the previous (revised) and new samples for freight transportation

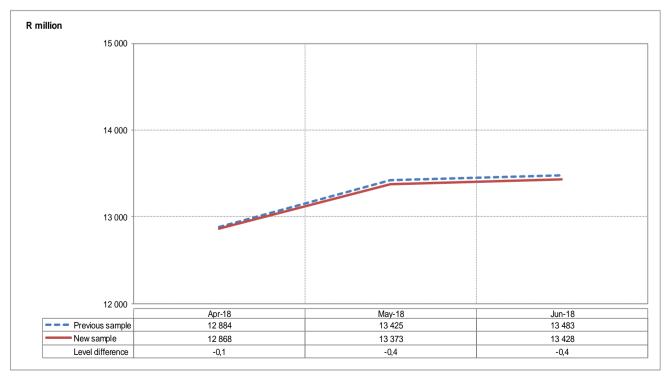

The reported level of income from freight transportation for the monthly survey of the land transport industry for the months April to June 2018 based on the new sample was 0,3% lower than the level of income from the previous sample (see Table F and Figure 3). The reported level of payload for the months April to June 2018 based on the new sample was 1,1% higher than the level of payload from the previous sample. The previous sample was drawn in April 2017 and was operational for the last half of 2017 and the first half of 2018.

Table F - Freight transportation estimates for the previous and new samples: April to June 2018

| Freight transportation estimates 1/ | Previous sample New sample | | Difference | Difference (percentage) 2/ |
|-------------------------------------|----------------------------|---------|------------|-------------------------------|
| Freight payload (000 tons) | 230 379 | 232 837 | 2 458 | 1,1 |
| Freight income (R million) | 39 792 | 39 669 | -123 | -0,3 |

^{1/} Units of measurement can be found next to the respective variables.

Figure 3 – Freight transportation income: monthly levels of previous and new samples from April to June 2018

^{2/} The percentage difference is the new sample minus the previous sample, divided by the previous sample, multiplied by 100.

Table G - Total income from freight transportation for the previous and new samples by type of commodity: April to June 2018

| Type of commodity | Previous sample (R million) | New sample (R million) | Difference (R million) | Difference (percentage) 1/ |
|--|--------------------------------|---------------------------|---------------------------|----------------------------------|
| Agriculture and forestry primary products | 2 933 | 3 296 | 363 | 12,4 |
| Primary mining and quarrying products | 14 202 | 14 179 | -23 | -0,2 |
| Manufactured food, beverages and tobacco products | 5 343 | 5 069 | -274 | -5,1 |
| Textiles, clothing and leather goods | 748 | 720 | -28 | -3,7 |
| Chemicals, coke, petroleum, rubber, plastic and other minerals | 3 368 | 3 197 | -171 | -5,1 |
| Basic metals and fabricated metal products | 1 474 | 1 559 | 85 | 5,8 |
| Non-metallic products | 932 | 943 | 11 | 1,2 |
| Electrical machinery, transport machinery and equipment | 597 | 570 | -27 | -4,5 |
| Motor vehicles, parts and accessories | 910 | 862 | -48 | -5,3 |
| Paper and paper products | 419 | 327 | -92 | -22,0 |
| Commercial products | 624 | 744 | 120 | 19,2 |
| Used household and office products | 916 | 787 | -129 | -14,1 |
| Containers | 1 892 | 1 984 | 92 | 4,9 |
| Parcels | 859 | 632 | -227 | -26,4 |
| Other freight | 4 578 | 4 800 | 222 | 4,8 |
| Total | 39 792 | 39 669 | -123 | -0,3 |

^{1/} The percentage difference is the new sample minus the previous sample, divided by the previous sample, multiplied by 100.

The largest percentage differences were in the following types of commodities:

- parcels (26,4% or R227 million lower in the new sample);
- paper and paper products (22,0% or R92 million lower in the new sample);
- commercial products (19,2% or R120 million higher in the new sample);
- used household and office products (14,1% or R129 million lower in the new sample); and
- agriculture and forestry primary products (12,4% or R363 million higher in the new sample).

Comparison between the previous (revised) and new samples for passenger transportation

The reported level of income from passenger transportation for the months April to June 2018 based on the new sample was 0,9% higher than the level of income from the previous sample (see Table H and Figure 4 on page 7). The reported level of number of passenger journeys for the months April to June 2018 based on the new sample was 1,0% lower than the level of number of passenger journeys from the previous sample.

Table H – Passenger transportation estimates for the previous and new samples – April to June 2018

| Passenger transportation estimates 1/ | Previous sample New sample | | Difference | Difference (percentage) 2/ |
|---------------------------------------|----------------------------|---------|------------|-------------------------------|
| Passenger journeys (000) | 135 180 | 133 792 | -1 388 | -1,0 |
| Passenger income (R million) | 2 646 | 2 670 | 24 | 0,9 |

^{1/} Units of measurement can be found next to the respective variables.

^{2/} The percentage difference is the new sample minus the previous sample, divided by the previous sample, multiplied by 100.

Figure 4 – Passenger transportation income: monthly levels of previous and new samples from April to June 2018

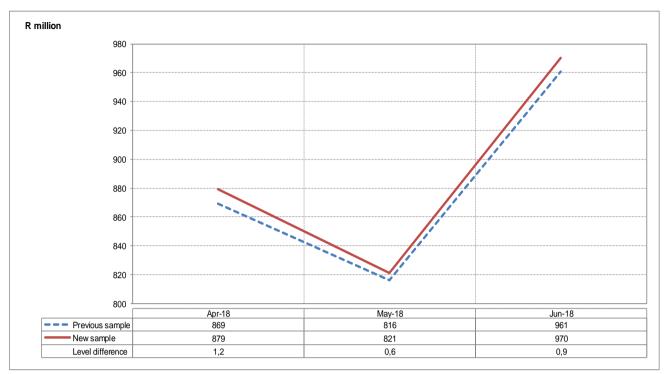

Table I – Total income from passenger transportation for the previous and new samples by type of service: April to June 2018

| Type of service | Previous sample (R million) | New sample (R million) | Difference (R million) | Difference (percentage) 1/ |
|----------------------------------|--------------------------------|---------------------------|---------------------------|-------------------------------|
| Railway passenger transportation | 639 | 639 | 0 | 0,0 |
| Road passenger transportation | 2 007 | 2 031 | 24 | 1,2 |
| Total | 2 646 | 2 670 | 24 | 0,9 |

^{1/} The percentage difference is the new sample minus the previous sample, divided by the previous sample, multiplied by 100.

Backcasting

To avoid breaks in the time series and to minimise revisions to historical growth rates, historical levels were revised (i.e. they were linked to the estimates based on the new sample).

Survey information

Introduction

- Statistics South Africa (Stats SA) conducts a monthly survey of the land transportation industry, covering passenger and freight transportation by rail and road (see paragraph 4 below). This survey is based on a sample drawn from the 2018 business sampling frame (BSF) that contains businesses registered for value added tax (VAT) and income tax.
- 2 In order to improve timeliness, some information for the latest month had to be estimated due to late response. These estimates will be revised in future statistical releases as soon as information becomes available. Published land transportation income estimates exclude VAT.

Purpose of the survey

3 The results of the monthly land transport survey are used to compile estimates of the gross domestic product (GDP) and its components, which are used in monitoring the state of the economy and formulation of economic policy. These statistics are also used in the analysis of comparative business and industry performance.

Scope of the survey

- 4 This survey covers enterprises involved in land transportation according to the following type of transportation:
 - railway transport (including passenger and freight transportation);
 - 'other' scheduled passenger land transport urban, suburban and inter-urban bus and coach passenger lines and school buses;
 - 'other' non-scheduled passenger land transport safaris and sightseeing bus tours, metered taxis and 'other' passenger transport including renting of motor cars with drivers; and
 - freight transport by road.

Exclusions

- 5 Passenger transportation excludes:
 - minibus taxis;
 - metropolitan buses (including the Bus Rapid Transport system BRT); and
 - rental of private cars/buses without drivers.

Freight transportation excludes:

- · renting of trucks without drivers; and
- in-house transportation.

Classification

The 1993 edition of the Standard Industrial Classification of all Economic Activities (SIC), Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 International Standard Industrial Classification of all Economic Activities (ISIC) with suitable adaptations for local conditions. Statistics in this publication are presented at SIC division (two-digit) level. Each enterprise is classified to the industry which reflects its predominant activity.

Collection rate

7 The preliminary collection rate for the survey on land transportation for July 2018 was 75,1%. The collection rate for June 2018 for the new sample was 80,4%.

Statistical unit

8 The statistical unit for which information is compiled and published is an enterprise, defined as a legal unit or a combination of legal units that includes and directly controls all functions necessary to carry out its income activities. The statistical units are derived from and linked to the South African Revenue Service (SARS) administrative data.

Revised figures

Revised figures are mainly due to late submission of data to Stats SA, or respondents reporting revisions or corrections to their figures. Preliminary figures, as indicated in the relevant tables, are subject to change and when revised will not be indicated as such.

Technical notes

Survey methodology and design

- 1 The survey is conducted on a monthly basis. Questionnaires are sent to a sample of 704 enterprises from a population of 4 523 enterprises. Completed questionnaires are required to be returned to Stats SA within 10 days after the end of the reference month. Fax and telephone reminders are used to follow up on non-respondents.
- 2 A stratified random sample was drawn at the SIC four-digit level in May 2018 from Stats SA's business sampling frame (BSF). Strata were formed using a combination of Standard Industrial Classification and the measure of size classes for enterprises (see paragraph 3 below).

The Neyman optimal allocation formula given below was used to allocate samples to each stratum:

$$nh = n * (Nh * Sh) / [\Sigma (Ni * Si)].$$

Neyman allocation formula not only allocates sample sizes to each stratum but also calculates the relative precision for each stratum as well as the relative precision for all strata. The relative precision for these strata was 0,8%.

Sample design and class limits

The land transportation industry is divided into four size groups. All large enterprises (size group one) are completely enumerated. Simple random sampling is applied to medium sized (size group two) and to small (size group three and four) enterprises. The total value of income of the large enterprises (size group one) is added to the weighted totals of size groups two, three and four to reflect the total value of income.

Measure of size classes (Rand)

| Enterprise size | Size group | Lower limits | Upper limits |
|-----------------|------------|--------------|--------------|
| Very small | 4 | 1 081 402 | 9 000 000 |
| Small | 3 | 9 000 001 | 39 000 000 |
| Medium | 2 | 39 000 001 | 78 000 000 |
| Large | 1 | 78 000 001 | |

Sample weighting

4 For those strata not completely enumerated, the weights to produce estimates are the inverse ratio of the sampling fraction, modified to take account of non-response in the survey. Stratum estimates are calculated and then aggregated with the completely enumerated stratum to form division estimates. These procedures are in line with international best practice.

Reliability of estimates

Data presented in this publication are based on information obtained from a sample and are, therefore, subject to sampling variability; that is, they may differ from the figures that would have been produced if the data had been obtained from all enterprises in the land transport industry in South Africa. Estimates are subject to sampling and non-sampling errors.

Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in the collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to minimise non-sampling errors by careful design of questionnaires, testing them in pilot studies, editing reported data and implementing efficient operating procedures. Fluctuations may occur in consecutive months as a result of seasonal and economic factors.

Year-on-year percentage change

7 The year-on-year percentage change in a variable for any given period is the change between that period and the corresponding period of the previous year, expressed as a percentage of the latter.

Contribution (percentage points)

8 The contribution (percentage points) to the annual percentage change for any given period is calculated by multiplying the percentage change of each type of commodity/service by its corresponding weight, divided by 100. The weight is the percentage contribution of each type of commodity/service to total income in the corresponding period of the previous year.

Seasonal adjustment

Seasonally adjusted estimates are generated each month using the X-12-ARIMA Seasonal Adjustment Program developed by the US Bureau of the Census. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be recognised more clearly. Seasonal adjustment does not aim to remove irregular or non-seasonal influences which may be present in any particular month. Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series even after adjustment for seasonal variations. Therefore the month-to-month movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour. The X-12-ARIMA procedure for land transportation is described in more detail on the Stats SA website at:

Trend cycle

10 The trend is the long-term pattern or movement of a time series. The X-12-ARIMA Seasonal Adjustment Program is used for smoothing seasonally adjusted estimates to estimates of the underlying trend cycle.

Glossary

Enterprise

An enterprise is a legal entity or a combination of legal units that includes and directly controls all functions necessary to carry out its activities.

Industry

An industry is made up of enterprises engaged in the same or similar kinds of economic activity. Industries are defined in the *System of National Accounts* (SNA) in the same way as in the *Standard Industrial Classification of all Economic Activities* (SIC), Fifth Edition, Report No. 09-90-02 of January 1993.

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data: and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Advance release calendar

A release calendar is disseminated on www.statssa.gov.za
