Publication date: 10 February 2022
Periodicity: Annually
104 pages

Bulletin of statistics – Publication discontinuate since March 2015

Earning and spending in South Africa: Selected findings and comparisons from the income and expenditure survey of October 1995 and October 2000

Publication date: 13 November 2002
Periodicity: 
95 pages

Mbalo brief
Since 2019, the world has been faced with the outbreak of different diseases. These diseases have been spreading at a fast pace, and affect a number of people across the world. After the outbreak of the COVID-19 pandemic in 2019, monkeypox (a viral zoonotic disease that can spread from animals to humans and from one human to another) an infectious disease has resurfaced across the world since its first discovery in 1958, in Copenhagen (Denmark). According to the World Health Organization (WHO), since May 2022 cases of monkeypox have been reported from 12 member states where the disease is not endemic (regularly found among particular people or in certain areas). In South Africa, the first case of monkeypox has been identified through laboratory testing at the National Institute for Communicable Diseases (NICD) on 22 June 2022.

Multilingual statistical terminology 2013
This Multilingual Statistical Terminology publication is proof of the determination to have all South Africans afforded the opportunity to have access to information in the languages they understand. This is a giant step towards informing the public of the state of affairs in their country irrespective of their level of education, religious and linguistic backgrounds. This publication allows all South Africans to begin to understand what we mean by, “producer’s price”, “annual crops” and “dwelling unit” in all 11 official languages of the country.

Overview of the 1998 social accounting matrix, 1998 (SAM)
This report provides further insight into the previously published Social Accounting Matrix, Report No. 04-03-02 (1998). Its main focus is on the income and expenditure patterns of the South African population. The aim of the report is not to give a detailed analysis or any policy simulations, but rather to give an overview of the 1998 Social Accounting Matrix that was published in November 2002.

Strategic plan 2020/21 – 2024/25
The main objective of this Strategic Plan is to define the roadmap for establishing a sound statistical system for the country. It builds on the successes and addresses the weaknesses of Stats SA over the past fifteen years, and outlines the medium-term strategy for improvements in statistical development. The plan is designed to guide planning and resource allocation over the next five years, and will be reviewed annually in the light of changing stakeholder needs, and emerging priorities and developments. The outcome of these annual reviews, and the changes associated with them, will be captured in Stats SA’s annual Work Programme.

South African Statistics, Publication discontinuate since October 2015
The contribution of small and micro enterprises to the economy of the country - A survey of non-VAT-registered businesses in South Africa - Part 1 – Summary and tables

In South Africa at present, the contribution of small and microbusinesses to the economy of the country has not been sufficiently estimated. This publication contains numerous tables reporting on the results of a 2001 survey which focused on businesses not registered for value-added tax (VAT).

http://www.statssa.gov.za/?page_id=1854&PPN=SESE
Publication date: 10 December 2002
Periodicity: 121 pages

The contribution of small and micro enterprises to the economy of the country - A survey of non-VAT-registered businesses in South Africa - Part 2 – Narrative report

This report aims to give information on the potential that the owners of non-VAT-registered small and micro-business in the country may have to create employment or income generating activities, and to contribute to the economic growth of the country. It is based on the results of the Survey of employers and self-employed (SESE) conducted by Statistics South Africa (Stats SA) in March 2001.

1.2 Statistical releases and reports available on Stats SA’s Website

Explanatory note

Releases are indicated by means of a “P” number followed by the title of the series, e.g. P0019 Statistics for the calculation of the management echelon for provincial administration for 1998.

Reports are indicated by means of a report no., e.g. 00-90-01 (1995) followed by the title of the report.

The date accompanying a particular report indicates the most recent issue in the series.

Human development index

The HDI of the United Nations Development Programme is used for obtaining internationally comparable indications of the life expectancy for individuals within a country or across various countries to live long and comfortable lives.

Civil cases for debt, insolvencies and company liquidations

P0021 - Annual financial statistics (AFS), 2020

The annual financial statistics survey (AFS), previously published as the economic activity survey (EAS), contains estimates of financial data for the following industries: Forestry and fishing, mining and quarrying, manufacturing, electricity, gas and water supply, construction, trade, transport, storage and communication, real estate and other business services (excluding financial intermediation and insurance, but including activities auxiliary to financial intermediation) and community, social and personal services (excluding government institutions). The AFS is designed to provide information on selected income and expenditure items, capital expenditure on new and existing assets and the book value of fixed and intangible assets at the end of the financial year for the South African-based activities of the enterprise.

COVID-19

00-80-01 – Business impact survey of the COVID-19 pandemic in South Africa, 3rd report
The report contains results from a rapid response survey, conducted by Stats SA during the lockdown, asking companies how the current crisis is affecting their business. The results focus on financial performance related to the trading status, business impact, turnover, import and export of goods, purchases, price changes, financial burden and assistance, business survival, and workforce of businesses. The indicators and analysis presented in the report depend on the responses received from businesses, which capture their perceptions and views of the COVID-19 and related impact.

Prices

P0100 – Income and expenditure of households, 2010/2011
The "Income and expenditure of households 2005/2006: Statistical release" presents the results of the Income and Expenditure Survey conducted by Statistics South Africa (Stats SA) between September 2005 and August 2006 (IES 2005/2006). The IES 2005/2006 based on the diary method was the first of its kind to be conducted by Stats SA. Previously IES were conducted by Stats SA every five years using the recall method. The IES 2005/2006 was designed to collect information on items and services acquired by South African households, various sources of income acquired by participating households (monetary or in-kind). This was accomplished by collecting details of all expenditure by a participating household and all acquisitions of goods and services for the household’s own consumption within a given reference period. The results of the survey serve as an input into identifying the goods and services that should be included in the Consumer Price Index (CPI) basket of goods and services.

P0111.9 – Income and expenditure of households, 2000: Limpopo
The information furnished in this statistical release is obtained from a comprehensive survey on the income and expenditure of households in South Africa in order to determine the weights for the CPI. Not only does this survey show the earning and spending capacity of Limpopo households, but also the pattern of household consumption.

P0141 – Consumer price index
This release contains results of the monthly Survey of Consumer (Retail) Prices. The purpose of the survey is to collect and provide information regarding changes in the overall level of prices of all goods and services bought by the average household. This publication contains the CPI (Inflation) rates. The P0141 contains information on all urban areas and the Additional tables contains information for provinces, Primary urban areas, Secondary urban areas and Rural areas.

6 pages

P0141.7 – Consumer price index - New basket price survey results, 2008
From January 2008 to December 2008 Stats SA collected prices for goods and services for the new CPI basket. These prices were used to calculate the indices according to the new weights published in July 2008. These indices were also re-based to 2008=100. These indices will form the basis for calculating the year-on-year changes in the CPI for 2009 and the month-on-month change between December 2008 and January 2009. These indices do not replace the officially published figures for 2008 and do not constitute a revision of the 2008 inflation numbers. The table numbering in this publication has the same format as the new monthly publication P0141 as from January 2009. The tables not included in this publication have no historical data for 2008.

P0142.6 – Export and import price indices, December 2013

A monthly survey of prices of commodities in exported and imported commodities on prices covering samples of exporters and importers in the South African economy. The results of the survey are used to compile the Producer Price Index (PPI) for exported and imported commodities which indicates changes in prices of exports and imports. These statistics are used by the private sector for contract price adjustments and as a deflator in the compilation of national accounts.

P0211.4 – National and provincial labour market trends over the last decade, 2003-2013
This report is the first in a quarterly series which will be released when the QLFS results are reported. The aim is to provide users with an analysis of various aspects of the South African labour market at provincial level based on current labour market information. Each report will focus on a different theme and the time frame of analysis will vary. Given that the QLFS series began in 2008, prior to which its predecessor the Labour Force Survey (LFS) was only conducted in March and September each year, analysis based on the 10-year period will not be undertaken in every report. This report aims to bridge the gap in our understanding of the interrelationship between the national labour market results and those of the provinces over the last decade with special emphasis on employment outcomes by industry.

P0211.4.1 – National and provincial labour market: Dynamics
The national labour market results mask variations at provincial level which can often be quite large. The nine provinces differ in population size, land mass, demographic profile, and economic structure. This report is the second in a quarterly series which will be released when the QLFS results are reported. The aim is to provide users with an analysis of various aspects of the South African labour market at provincial level, based on current labour market information. The analysis in this report is based solely on the results of the Quarterly Labour Force Survey (QLFS) conducted in the third and fourth quarters of 2012 (Q3: QLFS) and (Q4: QLFS). The data have been revised to reflect the new population benchmarks from the population census of 2011.

03-00-02 – Unwanted Fertility in South Africa

Maternal and child mortality and health is a function of the number of pregnancies and births a woman has. Reducing unwanted fertility is therefore one way of improving maternal and child health. This report used the recent 2016 and the 1998 South African Demographic and Health Survey to explore levels and differentials of unwanted fertility in the context of fertility decline in the country.

03-00-05 – Use of health facilities and levels of selected health conditions in South Africa: Findings from the General Household Survey, 2011

This report presents information on the use of health facilities by households in South Africa as well as the levels and patterns of selected health conditions in the country in 2011. It is based on information collected from respondents who participated in the General Household Survey that was conducted by Statistics South Africa from July to September 2011. The report focuses on the utilisation of health facilities and access to these facilities, highlighting mode of travel and time taken to reach the facilities. It also provides information on medical aid coverage, self-reported illnesses or injuries suffered by individuals and health care seeking behaviour. The report further presents information on communicable and non-communicable diseases, including medication taken for non-communicable diseases.

03-00-14 – Towards measuring the extent of food security in South Africa an examination of hunger and food inadequacy, 2017
This report presents the extent of food security in South Africa by looking at households’ involvement in agricultural activities, households’ level of adequacy in accessing food as well as households’ experiences of hunger. The report is based on the results of the General Household Survey conducted by Statistics South Africa in 2017. Food security consists of four dimensions, namely availability, accessibility, utilization and stability; however, due to data limitations, this report will mainly focus on examining issues related to food availability and accessibility.

03-00-17 – Alternative sources of demographic data
This report explores the existence, availability and quality of data sources collected by entities outside of Stats SA for demographic estimation. The report looks into various non-traditional data sources that would be useful in this endeavour. The report also looks at the road ahead in terms of how Stats SA incorporate such data sources in a way that does not compromise quality, enhances co-ordination of accessing data and makes data sources comparable.

03-00-18 – The Status of Women’s Health in South Africa: Evidence from selected indicators
The Sustainable Development Goals (SDG) prioritizes the global health of all persons. Also, the emergence of COVID-19 pandemic is expected to result in changes in reproductive health among women in South Africa. This report examined the status of women’s health in the country in recent time. It highlights the patterns and trajectories of selected indicators such as maternal and neonatal health, pregnancy, termination and delivery-related issues, gender-based violence, HIV epidemic and hunger during COVID-19. In achieving this, cross-sectional and administrative data were analysed. Overall, findings from the report were consistent with expectations in most cases.

P0301 – Community Survey 2016
The purpose of this report is to provide a profile of the country, as portrayed by the 2016 Community Survey. The CS 2016 not only adds to the trend in data regarding socio economic aspects but more importantly provides the latest evidence on the levels and differentials regarding demographic drivers (fertility, migration and mortality). CS 2016 is the first survey to provide a module ascertaining information on emigration that the country has conducted.

03-01-05 – Community survey, 2016 – Agricultural households

The information presented in the report is a result of seven questions, related to agriculture, which were included in the Community Survey 2016 questionnaire. The following questions were included in the Community Survey 2016 questionnaire: 1. Did this household produce any kind of food or other agricultural products (e.g. livestock, poultry, crops, food gardening, forestry, fish) whether sold or consumed from 01 January 2015 to 31 December 2015? 2. Where does this household MAINLY operate its agricultural activities? 3. What is the MAIN purpose of the household’s involvement in agricultural activity? 4. Which of the following (agricultural activities) is the household involved in? 5. What type of farming practice is used by this household for crop production? 6. Did this household own/look after any livestock or poultry as on 07 March 2016? 7. How many of the following livestock/poultry does the household own/look after as on 07 March 2016?

Publication date: 31 October 2018
Periodicity: 102 pages

03-01-26 – Community survey, 2007 – The RDP commitment: What South Africans say

The report deals specifically with measurement in the domains of meeting basic needs and developing our human resources. This provides an objective assessment of the performance of the country, on the extent to which it has made progress or failed to make progress. By comparing information gathered over the last 13 years such assessment can be made. The results are based on objective enumeration of those things that can be visibly seen such as the number of households that have access to a particular form of energy and to what end they deploy such energy. It is not anecdote, but it is what South Africans say about their living conditions. It is therefore appropriately titled ‘The RDP commitment: What South Africans say.’

Periodicity: 5 yearly
29 pages

03-01-43 – Census 2011 – Provinces at a glance

South Africa has had three censuses since the first general elections in 1994. The first census was conducted in 1996, the second one followed five years later (2001). However, a community survey, instead of a census, was conducted in 2007; whilst the recent census was conducted just over a year ago (2011). In this publication, data from the three censuses and the 2007 Community Survey are compared.

03-01-45 – Census 2011 – How the count was done

This section provides a summary of the various activities that were carried out prior to the finalisation of the results. They can be summarised as follows: Planning, Pre-enumeration, Enumeration, Processing and Editing.

http://www.statssa.gov.za/?page_id=3955
Publication date: 31 October 2012
Periodicity: 5 yearly
66 pages

03-01-46 – Census 2011 – Post-enumeration survey: Results and methodology

Statistics South Africa (Stats SA) conducted the Post-enumeration Survey (PES) for Census 2011 shortly after the completion of census enumeration, from November to December 2011. The main goal of the PES was to evaluate the coverage and content errors of the census. The PES was an integral part of the Census 2011 programme, but institutional arrangements were put in place to maintain the independence of PES operations to ensure that the results of the PES were not biased.

03-02-16 — Census 2001: Achieving a better life for all: Progress between Census 1996 and Census 2001

This report, drawing on census data from 1996 and 2001, illustrates in detailed statistics the number of areas where achievements are evident and others where there remains much to be done. In the areas where much remains to be done, we ask: at what speed should those changes be occurring? This is a very important question, in view of government.

03-02-17 — Census 2001: Post-enumeration survey: Results and methodology

A post-enumeration survey (PES) is a sample survey conducted immediately after a census, for the primary purpose of evaluating the census. It provides a concrete statistical basis for estimating census coverage, that is, the extent of undercount or overcount, and for adjusting the census data if there is evidence of significant coverage error. It also provides an evaluation of the reliability of some of the characteristics reported in the census.

03-02-44 – Prevalence of disability in South Africa

Census 2001 was the second census to be carried out in a democratic South Africa to provide demographic and socio-economic data required to inform policy decision-making as well as ascertain the achievements made in the provision of basic services to the people. Data on disability were collected as part of this important endeavour. This report highlights the key findings on disability emanating from the analysis of these data.

03-04-02 – Migration and urbanisation in South Africa

This report deals with the intricate processes and historical trends of migration and urbanisation in South Africa and shows that while the urbanisation level is on the increase, the migration level remains surprisingly constant. This apparently contradicting finding is possible because the interrelationship between migration and urbanisation is such that the net rural-to-urban migration (i.e. urban in-migration minus urban out-migration) and urban natural increase (i.e. urban births minus urban deaths) escalate without a concomitant increase in the other migration patterns (i.e. urban to rural, urban to urban, and rural to rural migration). Consequently, there appears to be some evidence supporting the United Nations.

03-06-01 – The coverage and quality of birth registration data in South Africa, 1998-2005

The report examines the birth registration process with special reference to South Africa and focus on the content, coverage and the quality of the register. It estimates the completeness of the birth register for the nine provinces and the country as a whole. It also provides estimates of fertility based on data from register and compare those with estimates from Census. Furthermore, the report describes the levels and trends in birth registration over time. Lastly, it estimates patterns of future registrations and adjustment factors that could be used to make the register more robust for analysis purposes.

03-06-02 – Exploring childlessness and delayed childbearing in South Africa, 2001-2011

Childlessness and fertility postponement describes a pattern of fertility, and is useful to better understand the family formations and the factors influencing the fertility transition in South Africa. Post-2001 there has been limited analysis of changes in fertility patterns in South Africa, particularly childlessness. The purpose of this paper is to determine the level of childlessness in South Africa over time, using census data.

03-06-03 – Maternal Health Indicators: Further Analysis of the 1998 and 2016 South Africa Demographic and Health Survey

The report presents findings from several areas of importance to maternal health care including antenatal, delivery and postnatal care services for women aged 15–49. Findings from this paper are useful since they describe how women in South Africa have utilised maternal health care services for their most recent pregnancy as this has implications for maternal and child mortality. Analysis of this nature adds to the literature of how maternal health indicators are changing over time. This report used data from 1998 and 2016 South Africa Demographic and Health Surveys to determine the prevalence and patterns in maternal health care utilisation.

03-09-05 – Adult mortality (age 15-64) based on death notification data in South Africa: 1997-2004

This analytical report analyses data for people age 15-64. In this report, the data on deaths by age, sex, and year of death are adjusted to take into account incompleteness of death registration. The report found that death rates rose for every five year age group between 1997 and 2004. Mortality from unnatural causes of death changes little over this period.

P0310 – Living conditions of households in South Africa, 2014/2015
The Living Conditions of Households in South Africa 2008/2009 is based on the results of the Living Conditions Survey (LCS) conducted in September 2008 to August 2009. This was the first LCS ever conducted by Stats SA. The next LCS will be conducted in 2013/14. This report provides information on the living circumstances of households in South Africa with special reference to spending patterns of households on different expenditure items. The report provides information on indicators such as average annual household expenditure, share of the bottom quintile to total household expenditure as well as in-kind expenditure such as free electricity, free water, etc. These indicators are derived using household expenditure data collected from households through the use of diaries and household questionnaire.

| In 2012, the South African government adopted the use of three national poverty lines for the measurement and monitoring of money-metric poverty in the country. For the construction of these lines, Statistics South Africa used an internationally recognized approach, namely the cost-of-basic-needs approach which links welfare to the consumption of goods and services. The National Poverty Lines statistical release provides the annual inflation-adjusted line values for South Africa’s three official poverty lines, namely the food poverty line (FPL), lower-bound poverty line (LBPL) and upper-bound poverty line (UBPL). These lines capture different degrees of poverty and allow the country to measure and monitor poverty at different levels. |

| Subjective Poverty in South Africa is a report based on the results of the Living Conditions Survey (LCS) conducted between September 2008 and August 2009. The main aim of this survey is to provide data that will contribute to better understanding poverty in South Africa and to provide data for monitoring levels of poverty over time. Measurement of poverty levels, like the measurement of any other phenomenon such as unemployment, fertility or mortality requires a standard definition to be applied over time to properly determine trends. A debate on the definition of poverty in South Africa has been a continuous one in which several approaches have emerged. Two of the main concepts at the core of the definition of poverty are objective and subjective poverty. Subjective poverty, the subject of this report, is an individual’s assessment of his or her own welfare, utility or happiness. It challenges the mainstream view that poverty is an objective, money-metric and uniformly applicable concept. |

| Men, women and children is a report based on the results of the Living Conditions Survey (LCS) conducted between September 2008 and August 2009. The main aim of this survey is to provide data that will contribute to better understanding poverty in South Africa and to provide data for monitoring levels of poverty over time. The report seeks to understand the adult population, the household situation and the child population through profiling their living circumstances and levels of poverty. Special focus is given to the differences between males and females, whether at the level of the household head or the individual. |

| 03-10-03 – Poverty profile of South Africa: Application of the poverty lines on the LCS, 2008/2009 | 27 November 2012  | Yearly               | 133   | wernerr@statssa.gov.za | info@statssa.gov.za | www.statssa.gov.za |
| Poverty is a key development problem in social, economic and political terms. In post-apartheid South Africa, fighting the legacy of poverty and under-development has always been a central theme of Government. Hence, the demand for regular, quality poverty data to inform Government. |

03-10-17 – Gender Series Volume IV: Economic empowerment, 2001-2017
This report forms part of a series of gender publications and is a sequel to the thematic report focusing on gender disparities in economic empowerment, published in 2014. It contains indicators on trends and patterns related to economic empowerment including in-depth analyses of different focal areas related to gender. These are based on a number of different surveys produced by Stats SA. It also provides some insight into various aspects of the living conditions of women, as well as on their participation in the labour market. A number of indicators profiled in the report are critical for the evaluation of progress and monitoring of the National Development Plan (NDP) and Sustainable Development Goals (SDGs) targets. Information about indicators identified in the report will inform policymakers and the general public on progress, challenges and how these need to be incorporated into South Africa’s development agenda.

03-11-01 – Census 2011: Agricultural households

This report presents the status of the South African household based agriculture as depicted in the Population Census of 2011. The information presented in the report is a result of three questions, related to agriculture, which were included in the Population Census 2011 questionnaire: - What kind of agricultural activity is the household involved in? - How many of the following (livestock) does the household own? - Where does this household operate its agricultural activities?

The report provides a provincial breakdown of agricultural households by type of agricultural activities undertaken, type and number of livestock kept, water source, type of energy used for lighting and cooking and type of toilet facility available. The report also profiles agricultural households in terms of the age, sex, income and educational level of household heads.

Publication date: 05 August 2013
Periodicity: 30 pages
P0317 – October Household Survey
This statistical release presents a selection of indicative findings and additional tables from the October household survey (OHS), which was conducted from 1995-1999, with particular emphasis on poverty indicators. The survey gathered detailed information on a sample of people living in households across the country. Discontinued - replaced by the Labour Force Survey and the General Household Survey.

GHS series volume IV: Food security and agriculture.

Publication date: 30 August 2012
Periodicity:
68 pages

The primary objective of this volume is to report on the energy-related behaviour and perceptions of households in South Africa using data that was collected between 2002 and 2012 as part of the General Household Survey (GHS). The GHS is specifically designed to measure the multiple facets of the living conditions of South African households and contributes, amongst other things, towards the monitoring of selected indicators in relation to the performance of various government departments. The study will lend special focus to data collected in that year. The report will address the following specific objectives: Determine access to electricity; Explore sources of energy used by households for cooking, heating and lighting; Explore levels of energy poverty; Explore satisfaction with electricity provisions, perceptions about the quality of electricity and pricing of electricity; Explore views on electricity-saving strategies.

03-19-00 – Social profile of vulnerable groups in South Africa, 2012
A social profile is concerned with factors and processes that influence vulnerability towards various pressures that may prohibit an individual from enjoying life. This report attempts to highlight some of these challenges by providing a snapshot of vulnerable groups (specifically children, youth, women, people with disabilities and the elderly) in terms of issues such as household characteristics, housing, access to basic services, economic participation and income, health and well being, and finally education and skills development. Data will be drawn from the General Household Surveys for the period 2002-2009. It is hoped that the report will enhance awareness of the challenges faced by these vulnerable groups and that data will contribute to a better understanding of their respective development dynamics.

03-40-01 – Crime statistics Series volume III - Exploration of selected contact crimes in South Africa (In-depth analysis of the Victims of Crime Survey data), 2011-2014/15
Three specific contact crimes are discussed in this report, these are: assault, sexual offences and murder. The Victims of Crime Survey (2014/15), in conjunction with South African Police Service (SAPS) statistics, Stats SA’s mid-year population estimates (2014/15) and Census 2011 data were used in order to provide a holistic view of contact crime in the country. The demographic and socio-economic characteristics of victims, as well as the circumstances surrounding these crimes were analysed.

03-40-02 – Crime statistics Series I (2010-2011) - Exploration of the extent and circumstances surrounding housebreaking/burglary and home robbery

Crime Statistics Series The report is the first in a series of Victims of Crime Survey (VOCS) thematic reports aimed at providing an in-depth understanding of aspects of crime and primarily focuses on home robbery and housebreaking/burglary. It provides statistical measures of trends and circumstances surrounding home robbery and housebreaking/burglary in South Africa between 2010 and 2011. It focuses on household and neighbourhood characteristics that may explain why households were victimized or suffering from repeat victimization, measures likely to be taken by victims to avoid injury during home robbery as well as precautionary measures taken by victims to protect homes and properties after the victimisation experience.

National accounts

Social accounting matrix: Constructing a social accounting matrix: Comparisons across eleven countries

This discussion document contains comparisons between the construction of a social accounting matrix across eleven countries. It aims to compare the methods and findings of the 1998 SAM for South Africa with the experiences of other countries in the compilation of their own SAM, in order to establish whether the methodologies used in other countries may be applied in the South African context.

04-01-00 – National Natural Capital Accounting Strategy: A ten-year strategy for advancing Natural Capital Accounting in South Africa

The purpose of the National Natural Capital Accounting (NCA) Strategy: A ten-year strategy for advancing NCA is to respond to the need to focus the efforts of Statistics South Africa (Stats SA) and other institutions engaged in NCA on developing priority natural capital accounts and effective statistical systems and institutional mechanisms to inform South Africa’s sustainable development policy objectives. The National NCA Strategy is owned and published by Stats SA as the national statistics office (NSO), but it is co-developed with the South African National Biodiversity Institute (SANBI) and guided by the various institutions represented on the NCA Strategic Advisory Group.

04-04-01 – Final supply and use tables, 2005: An input-output framework
This report contains the Final Supply and Use Tables (SUT) according to the recommendations of the 1993 System of National Accounts which Stats SA has been implementing since 1995. The tables are closely linked to the estimates for the gross domestic product (GDP). This report contains the final supply and use tables (SU-tables) for 2005. In accordance with international best practice, an update of the base year has to take place regularly every five years. The 1993 SNA requires countries to compile supply and use tables (SU-tables) as they form an integral part of the 1993 SNA. According to the 1993 SNA, the annual estimates of gross value added and its components, as well as output, intermediate consumption expenditure, final consumption expenditure and GDP should all have their origin in annual SU-tables. The SU-tables are intended to include all the transactions in goods and services in an economy for a specific year, e.g. 2005, in a matrix format. They allow for close examination of the consistency of the national accounts by linking and integrating the various components within a single framework.
Publication date: 14 October 2010
Periodicity: 126 pages

The input-output tables (I-O tables) for South Africa for the years 2010 and 2011 provide an update to the draft I-O tables for South Africa that were published in March 2013 for the 2009 reference year. An I-O table is a theoretical framework that focuses on the relationship between industries and their production and use of products. It represents the economy in a matrix form by listing the consuming industries as columns, and the supplying industries as rows.

32 pages
04-04-03 – Supply and use tables, 2019
This report contains the 2010 Supply and Use tables (SU-tables), estimated according to the recommendations of the 2008 System of National Accounts (2008 SNA). The SU-tables, often regarded as the cornerstone of the SNA, have statistical and analytical functions. As a statistical tool they serve as a coordinating framework for economic statistics, both conceptually for ensuring the consistency of the definitions and classifications used, and as an accounting framework for ensuring the numerical consistency of data obtained from different sources. As an analytical tool, the tables serve as a basis for calculating the economic data contained in the national accounts, and for detecting weaknesses in the economic data.

04-04-04 – Benchmarking and rebased estimates of Gross Domestic Products, 2021
(National Accounts: Sources and Methods)
Gross Domestic Product measures the size of the economy and its growth rate over time, and is the most familiar and widely recognised feature of the national accounts. Stats SA is publishing newly benchmarked real (or volume) Gross Domestic Product measured at constant 2015 prices, which replaces the previous Gross Domestic Product measured at constant 2010 prices. Stats SA is also publishing revised estimates of nominal Gross Domestic Product, measured at current prices, since these are inevitably affected by new methods, data sources and benchmarking. Rebasings and benchmarking, along with the introduction of new sources and methods, are essential activities for maintaining Gross Domestic Product as a reliable measure of economic performance. Stats SA has produced this sources and methods document (Report 04-04-04) specifically for South Africa. It covers the supply and use tables, the three different approaches to GDP (production, expenditure and income), and other related topics.

D0405 – Update water accounts for South Africa, 2000
This document contains updated Water Accounts for South Africa constructed according to the recommendations of the United Nations. The first water accounts for South Africa (in physical terms), Report No. 04-05-01 (2000), were published in 2004. The accounts are presented as a Satellite Account to the 1993 System of National Accounts. Satellite accounts provide a framework linked to the central accounts and enable attention to be focused on a certain field or aspect of economic and social life in the context of national accounts: examples are satellite accounts for the environment, tourism, or unpaid household work.

04-05-01 – Natural resource accounts – Water accounts for nineteen water management areas, 2000

This report contains the first water accounts (in physical terms) for the 19 water management areas of South Africa constructed according to the recommendations of the United Nations. It is presented as a Satellite Account to the 1993 System of National Accounts (1993 SNA), which Statistics South Africa (Stats SA) has been implementing since 1995.

This report gives a background on the exposition of Natural Resource Accounting together with an explanation of the methodology (techniques and method used) for the compilation of the mineral accounts (both physical and monetary accounts) for South Africa for the period 1980 to 2001.

04-05-07 – Tourism Satellite Account for South Africa (TSA), final 2017 and provisional 2018 and 2019

The Tourism Satellite Account (TSA), final 2014 and provisional 2015 and 2016 covers updated and new provisional figures for the reference years 2015 and 2016 as well as the final results for 2014. It provides an overview of the role that tourism plays in South Africa and provides information on the contribution by tourism to the South African economy in terms of expenditure and employment.

D0405.2 – Mineral accounts for South Africa, 1990-2010

This discussion document presents a discussion on mining as a driving force in the South African economy. Mining provide value through exports and contributes to the industrial development of South Africa. The mineral accounts can be used to derive valuable indicators for resource management and assist in assessing the sustainability for decision and policy-makers.

D0405.2.1 – Environmental economic account indicators, 2002-2009/2010

This discussion document presents a discussion on the development of indicators based on environmental economic accounts. This discussion document explores the practicality of using the environmental economic accounts as a framework to develop indicators. This is in line with the United Nations Statistics Division urging countries to implement the Integrated System of Environmental and Economic Accounts (SEEA), which has been adopted as an international standard.
04-05-20 – Environmental economic accounts compendium

This report is a compendium presenting the updated energy, fishery, mineral accounts and indicators for South Africa. This is the first Environmental Economic Accounts Compendium report compiled by Statistics South Africa.

Publication date: 29 March 2017
Periodicity: Yearly
59 pages

D0405.3.1 – Draft information and communication technology satellite account for South Africa, 2005

This discussion document presents the draft Information and Communication Technology satellite account for South Africa.

http://www.statssa.gov.za/?page_id=1854&PPN=D04_03.1
Publication date: 18 March 2013
Periodicity: Once-off

D0405.4 – Country experience in the compilation of Tourism Satellite Accounts

The aim of this discussion document is to investigate international country experiences (international best practices) in compiling and populating the TSA tables (i.e. data sources used, assumptions made and ratios used), as well as to make recommendations for the development and compilation of the TSA tables for South Africa.

http://www.statssa.gov.za/?page_id=1854&PPN=D04_04
Publication date: 15 February 2007
Periodicity: Once-off
89 pages

D0405.5 – Statistics of the Tourism Satellite Account and assessment of data sources related to tourism in South Africa

The aim of this discussion document is to give an overview of the basic data requirements needed to compile a TSA, as well as to do an assessment of the data sources that are currently available in South Africa. This discussion document is also a follow-up on the discussion document Status of the tourism satellite account in South Africa (D0405.3) published on the Stats SA website (www.statssa.gov.za) in April 2005.

http://www.statssa.gov.za/?page_id=1854&PPN=D04_05.5
Publication date: 05 April 2007
Periodicity: Once-off
297 pages

D0405.6 – Linking Government Strategies and the Tourism Satellite Account in South Africa

The aim of this discussion document is to show how government tourism strategies in South Africa can be complemented and informed by the use of information from the compilation of a Tourism Satellite Account for South Africa. It examines government tourism strategies in the context of the information that the Tourism Satellite Account can provide in order to monitor the impact and the progress of the policies.

D0407 – The status of the Information and Communication Technology satellite account for South Africa
The purpose of this discussion document is to supplement the existing discussion document with the following:
• The international best practices in ICT indicators, and to establish recommendations based on these international experiences for South Africa;
• The different ICT indicators used by other countries focusing in particular on educational and socio-economic ICT indicators;
• To explore the different available data sources within Stats SA for the compilation of specific ICT indicators;
• To list the current progress made in the compilation of the draft ICT satellite account for South Africa; and
• To examine the data gaps that still exists.

20 pages

D0442 – Value added by industry and institutional sector, 2000: Integrated approach to the compilation of national accounts

The publication describes the cross-classification of national accounts aggregates such as value added according to the type of institution and the type of industrial sector. The information is based on the supply and use tables for the reference period 2000. It therefore allows for additional analysis of the estimates of value added and the components of gross domestic product for South Africa.

This publication presents estimates in respect of the 2006 motor trade large sample survey (LSS). The 2006 motor trade LSS collected data from a sample of 2,149 enterprises drawn from a sampling frame of 18,167 which were operating between 1 July 2005 and 30 June 2006. The sample was stratified in such a way that all large enterprises (those with turnover equal to or greater than R39 million) were included. The data for the number of employees were provided for the last pay period ended on or before 30 June 2006. Data were collected at the 4-digit SIC level of classification of enterprises (except for SIC 6312 that was collected at 5-digit SIC level).

P6343.2 – Motor trade sales
This statistical release contains results of the monthly survey of retail trade in motor vehicles and accessories. The survey is designed to obtain information regarding income from the sales of new and used vehicles, workshop income, other trading income and the number of new and used vehicles sold.

P6410 – Tourist accommodation
This statistical release contains results from the Tourist Accommodation Survey.

P6411 – Accommodation industry
This statistical release contains results from the Accommodation Large Sample Survey on financial, employment, stay units and beds available information in the accommodation industry.

D6411.1 – Discussion document on South Africa’s Accommodation Industry
The purpose of this report is to examine and discuss the structural changes in the accommodation industry over time using data from Stats SA.

64-11-01 – Accommodation industry, 2018
This statistical report contains financial and provide details of sales, services and purchases, stay units and beds sold, facilities and other guest amenities and information and communication technology usage results from the 2012 Large Sample Survey of the accommodation industry.
P6420 – Food and beverages

This release contains results of the monthly Food and Beverages survey. This survey covers a sample of public and private enterprises involved in the production of meals and drinks for immediate consumption, in South Africa. For example, restaurants, take-aways, coffee-shops, caterers and bars are included in this category.

71-03-02 – Transport Series Volume II: Exploring social disparities in accessing workplace and educational institutions: Using travel time and travel cost: In-depth analysis of the National Household Travel Survey data 2013
The main purpose of this report is to present insights and investigate social disparities in accessing place of work and educational institution using travel time and travel cost. In addition, public transport accessibility indices are calculated, which are relatively fast, easily understood and could be used to compare different modes between specific origins and destinations. Furthermore, groups of people with poor access in terms of their demographic and socioeconomic status as well as location are identified.

P9119.4 – Financial statistics of consolidated general government, 2019/2020

This statistical release includes economic and functional classifications of transactions of consolidated general government. General government refers to those government units whose primary activity is to assume responsibility for the provision of goods and services to the community or to individual households free of charge or at prices that are not economically significant and to redistribute income and wealth by means of transfers. A defining characteristic of general government is the ability to impose, directly or indirectly, taxes and other compulsory levies, for which there is no direct quid pro quo, on other sectors of the economy. The internal transactions between the different levels of the general government are eliminated in the tables.

This report presents data and analysis to contribute towards a better understanding of the higher education system in South Africa.

Publication date: 28 March 2019
Periodicity: 92 pages

The Education Series Volume VI report aims to present an overview of demographic and socio-economic changes observed between individuals in Generation X (1960-1979) and Y (1980-1999), as well as the so-called Born-Free generation that were born after 1994. These generations were shaped by important political, economic and social changes in South Africa, and this affected the educational and labour market opportunities and outcomes.

http://www.statssa.gov.za/?page_id=1854&PPN=92-01-06
Publication date: 25 February 2020
Periodicity: 115 pages

The analysis presented in this report is intended to provide a better understanding on why and how children well-being and educational opportunities are changing in South Africa. The report presents the demographic characteristics of the children of South Africa in the context of the age, sex and size composition of the population in the country. It provides information on children poverty profiles, their access to social grants and their living arrangement. It also discusses the birth registration status in the country. The report also provides an overview in child mortality in South Africa with top underlying reasons of death being the particular focus. The report also includes an in-depth review of educational participation of children aged 0–17, identifying important patterns and trends.

http://www.statssa.gov.za/?page_id=1854&PPN=92-01-07
Publication date: 25 February 2021
Periodicity: 89 pages

The report discusses the readiness of households, during COVID-19, for alternative or remote learning options available to learners from radio, television based instructions to internet-based instructions. These options required access to the necessary technology or tools by households to benefit from these methods of learning. The report shows the strong urban-rural digital divide as well as the inequality by income in access to internet. The report also shows not all learners had access to remote learning options. The effect of the lockdown had high impact on the number of out-of-school children in 2020.

Publication date: 24 February 2022
Periodicity: 72 pages
