Table of contents

Section 1: Introduction	1
1.1.1 Geography frame	4
1.1.2 Community Survey 2016 sampling methodology	4
1.1.3 Questionnaire development processes for CS 2016	5
1.1.4 Survey Coordination, Monitoring and Evaluation (SCM&E)	6
1.1.5 Data editing strategy	8
Section 2: The land area of South Africa	9
2.1 Geography	10
Section 3: The people of South Africa	13
3.1 Demographics	14
3.2 Migration	42
3.3 Disability	56
3.4 Education	61
Section 4: The households of South Africa	75
4.1 Perceptions on municipal services	76
4.2 Housing and dwelling information	93
4.3 Household services	103
4.4 Energy sources and energy saving methods	120
4.5 Ownership of household goods	131
4.6 Internet and postal services access	143
4.7 Crime statistics and perceptions on safety	149
4.8 Agricultural activities	153
4.9 Food security	162

Section 5: Emigration and mortality of South Africans	165
5.1 Emigration	166
5.2 Mortality	170

**Section 1:
Introduction**

1.1 Introduction

Community Survey 2016 is the second intercensal survey in the democratic South Africa. This household based survey is one of the few available data sources providing data at municipal level. Provision of data at this level supports evidence-based decision making that has become increasingly a best practice which many countries, including South Africa, embrace. CS 2016 results are thus critical in promoting optimal resource allocation and utilisation in all spheres of government in order to reduce poverty and vulnerability among South Africa's most marginalised. Secondly, the development and implementation of policy, implementation of legislature deems it necessary to have reliable statistics that inform the social, demographic and economic standing of the country.

The CS 2016 is the second large sample survey Statistics South Africa undertook after CS 2007, but this time around the data were collected electronically using Computer Assisted Personal Interviewing (CAPI) system as opposed to the paper collection method used in CS 2007. The new initiative in the organisation is expected to reduce financial and time costs in data processing as well as data quality enhancement. Eligible persons for enumeration are all persons present in the household(s) of the sampled dwelling units on the reference night (midnight 6th March 2016 to 7th March 2016), including visitors. Members of the household who were absent overnight, for example, working, travelling, at entertainment or religious gatherings but returned the next day were also counted. For purposes of Stats SA, a household is a group of persons who live together, and provide for themselves jointly with food and other essentials for living, or a person who lives alone. Babies born before the reference night were also included in the count, the reason being that they were already born by the midnight of 6th March to 7th March 2016. Members of the household who

Community survey 2016 in brief

died after the reference night were counted in as they were alive during the midnight of the reference period. In contrast, those born after the reference night were excluded.

The use of the CAPI system is not the only new process used, others include utilisation of the present updated dwelling frame data captured from the Census 2011 listing process. Newly incorporated in the CS questionnaire include:

- Main religious affiliation
- Main reason for leaving the country
- Mode of transport used to reach the person's destination for going to school or work and time taken to reach the destination
- Main challenges/problems/difficulties facing a municipality
- Quality and satisfaction with provision of basic services
- Opinion on improving standards of living in households
- Sources of income
- Year of death of mother and/ or father if reported deceased
- Perceptions of safety and crime experienced in households
- Food security measures
- Extended additional questions on agricultural activities carried by households
- Characteristics of emigrants (persons who left the country to live elsewhere)

This chapter highlights the planning processes for CS 2016. During the planning phase, the focus in the early stages was primarily on setting strategic directions and ensuring that all dependencies between the different phases and role players were identified, potential risks identified and control measures put in place to minimise their adverse effects. This facilitated effective integration and implementation of various activities by ensuring that each phase was properly resourced. During the planning phase, all work streams and focus areas prepared operational plans which provided detailed lists of activities that were to be undertaken to achieve specific objectives and outputs as profiled in the CS 2016 Project Charter.

1.1.1 Geography frame

The Dwelling Frame (DF) is a structures frame, and dwelling units (DUs) form part of the feature classification of structures. Datasets in the integrated DF base layer include: Dwelling Frame 2011 (formal and informal), Listing Census 2011, Spot Building Count 2012, Address Assignments and Municipal data. Worth mentioning is the fact that the use of existing updated dwelling frame for a large sample survey such as CS 2016 is the first of its kind in line with other first time data collection processes in the case of Stats SA. It is also accepted that ongoing improvement is expected as it is not that perfect at this stage.

1.1.2 Community Survey 2016 sampling methodology

The sample design for CS 2016 was a stratified single stage sample design. At EA level, all in-scope EAs were included in the sample and a sample of dwelling units was taken within each EA (i.e. there was no

sub-sampling of EAs). The EA frame was based on the Census 2011 information. The updated dwelling unit (DU) frame was constructed by the Geography Division, using geo-referenced spatial systems.

1.1.3 Questionnaire development processes for CS 2016

The development and design processes of the CS 2016 questionnaire was informed by national priorities, global and continental emerging population issues embedded in the SDGs, data needs of both existing and prospective users and comparability with the previous community survey (i.e. CS 2007) and censuses. The development of the CS Questionnaire involved a number of phases as mentioned below:

- Stakeholder needs assessment is an international best practice in survey and census planning aimed at producing products that meet user needs. Stakeholders play a fundamental role in providing information on questions to be asked in a survey. During this phase, processes including review of previous censuses' data items and questionnaires were undertaken, and user consultations were held with key internal stakeholders on what needed to be measured in CS 2016.
- Through the consultation process, it became clear that there is increased demand for data at municipal level. Following the consultation process, Community Survey data Items were then finalised and categorised into broader themes of demographics, migration, general health and functioning, parental survival, education, income and social grants, employment, fertility, mortality, housing conditions, access and quality of basic service provision.

The Community survey 2016 questionnaire was designed using the World Bank Survey Solutions application, which is an on-line based questionnaire design application. During the design, skipping patterns and validation rules were predetermined and embedded in the electronic questionnaire. Data collection instruments, questionnaires in particular were developed and subjected to thorough testing and review processes to ensure that the final product (questionnaire) solicits accurate information. This Community Survey 2016 questionnaire consists of new questions while some other questions have been adopted from existing household based surveys and Census 2011. Two-stage testing was adopted for CS 2016; 'Behind-the-glass' testing and field testing. The results of each test were used to improve the quality of the draft questions and CS 2016 indicators. The draft CS questionnaire was presented at different fora for approval. These include the CS Technical Committee, Questionnaire Clearance Committee, CS Management, Population & Social Statistics Cluster, Statistics Council Population Sub-committee, and the Statistics Council.

1.1.4 Survey Coordination, Monitoring and Evaluation (SCM&E)

The Survey Coordination, Monitoring and Evaluation (SCM&E) Division in the Survey Operations Cluster is responsible for the Monitoring and evaluation of the quality aspects of all population and household based survey processes in the Survey Operations and Population and Social Statistics Cluster. As part of the enhancement of quality, SCM&E Division monitored CS 2016 Field Operations activities in all provinces. The objectives of the CS 2016 Monitoring included conducting quality checks on the collected data, conducting verification on in- and out-of-scope cases and monitoring any other issues that can have impacts on data quality, with the purpose of compiling lessons learnt. For the purpose of the study, Monitors

also used the tablets to conduct the Monitoring activities. Their tablets were loaded with Observation, Questionnaire Quality Check, Out-of-scope Verification and Control Visit forms.

A total of 7 184 questionnaires were checked in the entire data collection period, and 5 376 (74,8%) errors were identified. During the interview observations, 1 852 observations and 3 501 control visits were conducted while a total of 7 870 points were verified and 3 787 DUs were in agreement while 4 083 were not out of scope.

Intensive training was required during the use of technology, from the Questionnaire, Navigation system and CAPI. In addition, the administration of DURF in a point needed close Monitoring because in instances where there is growth or shrinkage, the FWs might decide to leave the DUs unlisted to avoid more work load. Intensive and continuous training on the use of DURF was encouraged. The FWSs and DSCs were encouraged to take more responsibility of observing the FWs especially during the first two weeks of data collection. DSCs were also urged to conduct immediate and continuous quality checks and identify the non-response cases which would then immediately be verified by the FWSs.

1.1.5 Data editing strategy

Quality assurance in CS 2016 was largely automated and handled in two phases. The first phase of quality assurance involved the electronic questionnaire being subjected to conditions and validation rules. This process eliminated unnecessary inconsistencies in the data during data collection. An additional automated quality assurance process was used during data collection where completed questionnaires were flagged as REJECTED or ACCEPTED based on minimum processability rules. Any questionnaires submitted to database that did not meet the set minimum rules were marked as REJECTED, and sent back to the fieldworker for verification and correction. The fieldwork supervisors were involved in taking note of the flagged questionnaires and assist the fieldworker in correcting the mistakes accordingly. For any record marked as REJECTED once, the running of the rejection was done at least for four different times and at different dates. This was necessary for the fieldworker to try and correct mistakes before a particular questionnaire could be declared "Complete". This process contributed tremendously in reducing missing values on a number of questions.

3.4 Education

Table 25: Distribution of persons aged 20 years and older by levels of education attained by province

Province	No schooling	Primary education	Secondary education	Bachelor's degree
Western Cape	99 112	3 586 554	1 872 616	237 468
Eastern Cape	300 907	2 906 650	1 206 981	107 841
Northern Cape	58 818	568 748	255 879	17 811
Free State	105 014	1 415 231	706 722	54 599
KwaZulu-Natal	530 173	4 942 099	2 830 345	198 630
North West	199 626	1 736 216	833 345	59 669
Gauteng	360 671	7 970 575	4 846 337	553 676
Mpumalanga	289 024	1 979 275	1 078 408	55 578
Limpopo	443 464	2 406 216	1 129 500	93 161
South Africa	2 386 810	27 511 562	14 760 134	1 378 433

No schooling is no schooling only

Primary = sum of all persons with grade 7 and higher (excludes 'other' and 'do not know')

Secondary = sum of all persons with grade 12, NT3-N6, Certificate with grade 12, diploma with grade 12 and higher (excludes 'other' and 'do not know')

Bachelor = sum all persons with bachelors and higher (excludes 'other' and 'do not know')

Table 26: Distribution of persons aged 20 years and older by levels of education attained by province (%)

Province	No schooling	Primary education	Secondary education	Bachelor's degree
Western Cape	2,4	86,4	45,1	5,7
Eastern Cape	8,0	77,6	32,2	2,9
Northern Cape	7,9	76,3	34,3	2,4
Free State	5,9	80,1	40,0	3,1
KwaZulu-Natal	8,6	80,5	46,1	3,2
North West	8,7	76,0	36,5	2,6
Gauteng	3,9	86,9	52,8	6,0
Mpumalanga	11,3	77,3	42,1	2,2
Limpopo	13,9	75,2	35,3	2,9
South Africa	7,1	81,5	43,7	4,1

No schooling = total with no schooling \total population aged 20+

primary = total primary \total population aged 20+

secondary = total secondary \total population aged 20+

bachelor = total total \total population aged 20+

Note: because of accumulating persons the percentages do not add up to 100%
