Key findings for December 2021

Final manufactured goods – headline PPI

Annual producer price inflation (final manufacturing) was 10,8% in December 2021, up from 9,6% in November 2021. The producer price index increased by 1,3% month-on-month in December 2021.

The main contributors to the headline PPI annual inflation rate were coke, petroleum, chemical, rubber and plastic products; food products, beverages and tobacco products; and metals, machinery, equipment and computing equipment (Figure 1.2 on page 7).

- Coke, petroleum, chemical, rubber and plastic products increased by 25,8% year-on-year and contributed 5,0 percentage points.
- Food products, beverages and tobacco products increased by 5,7% year-on-year and contributed 2,1 percentage points.
- Metals, machinery, equipment and computing equipment increased by 12% year-on-year and contributed 1,7 percentage points.

The main contributors to the headline PPI monthly increase were coke, petroleum, chemical, rubber and plastic products, which increased by 2,4% month-on-month and contributed 0,5 of a percentage point; and food products, beverages and tobacco products, which increased by 0,8% month-on-month and contributed 0,3 of a percentage point (Figure 1.1 on page 7).

Figure 1 - PPI headline index numbers and year-on-year rate of change

Key findings for December 2021

Intermediate manufactured goods

The annual percentage change in the PPI for intermediate manufactured goods was 23,1% in December 2021 (compared with 23,1% in November 2021). The index increased by 0,9% month-on-month.

The main contributors to the annual rate were chemicals, rubber and plastic products (10,6 percentage points), basic and fabricated metals (8,8 percentage points) and sawmilling and wood (3,1 percentage points) (Figure 2.2).

The main contributors to the monthly rate were chemicals, rubber and plastic products (0,4 of a percentage point) and basic and fabricated metals (0,4 of a percentage point) (Figure 2.1).

Electricity and water

The annual percentage change in the PPI for electricity and water was 15,4% in December 2021 (compared with 16,7% in November 2021). The index decreased by 1,5% month-on-month.

Electricity contributed 14,7 percentage points to the annual rate, and water contributed 0,7 of a percentage point (Figure 3.2).

Electricity contributed -1,6 percentage points to the monthly rate (Figure 3.1).

Mining

The annual percentage change in the PPI for mining was 5,9% in December 2021 (compared with 7,0% in November 2021). The index increased by 0,8% month-on-month.

The main contributors to the annual rate were non-ferrous metal ores (4,6 percentage points) and coal and gas (3,0 percentage points) (Figure 4.2).

The main contributor to the monthly rate was stone quarrying, clay and diamonds (1,8 percentage points) (Figure 4.1).

Agriculture, forestry and fishing

The annual percentage change in the PPI for agriculture, forestry and fishing was 8,4% in December 2021 (compared with 7,2% in November 2021). The index increased by 1,0% month-on-month.

The main contributor to the annual rate was agriculture (8,0 percentage points) (Figure 5.2).

The main contributor to the monthly rate was agriculture (1,4 percentage points) (Figure 5.1).

Explanatory notes

<p>Purpose and results of the survey</p>	<p>The Producer Price Index (PPI) measures changes in the prices of locally produced commodities. A sample of producers is surveyed each month and the results of this survey are used to compile the producer price indices for final manufactured goods, intermediate manufactured goods, electricity and water, mining, and agriculture, forestry and fishing. The PPI can be used as an economic indicator of inflation, as an escalator in contracts and as a deflator in the calculation of the national accounts.</p> <p>Further information on the weighting structure, sources of information and methods of compilation of the PPI can be found in the PPI sources and methods document, available on the Stats SA website.</p>
---	---

Glossary

<p>Producer Price Index</p>	<p>The PPI is defined as “A measure of the change in the prices of goods either as they leave their place of production or as they enter the production process (OECD).”</p>
<p>Contributions</p>	<p>The monthly (annual) contribution of a specific product or group of products to the specific PPI is calculated by multiplying the weight of this product or group of products with the difference of the current index and the previous month (year) index for this product or group of products, divided by the index for the specific index, for the previous month (year).</p>
<p>Annual inflation rate</p>	<p>The annual inflation rate per specific PPI is the change in the specific PPI for all items of the relevant month of the current year compared with the specific PPI for all items of the same month in the previous year expressed as a percentage.</p>
<p>Annual percentage change</p>	<p>The annual percentage change is the change in the index of the relevant month of the current year compared with the index of the same month in the previous year expressed as a percentage.</p>
<p>Average annual inflation rate</p>	<p>The average annual inflation rate is the change in the average specific PPI for all items of one year compared with the average specific PPI for all items of the previous year expressed as a percentage.</p>
<p>Average annual percentage change</p>	<p>The average annual percentage change is the change in the average index of one year compared with the average index of the previous year expressed as a percentage.</p>
<p>Monthly percentage change</p>	<p>The monthly percentage change is the change in the specific PPI of the relevant month compared with the specific PPI of the previous month expressed as a percentage.</p>
<p>Chain linking</p>	<p>The construction of a continuous price series by multiplying together price indices that have been using different weights reference periods. The resulting index is referred to as a chained index (Practical Guide to producing Consumer Price Indices; 2009). Linking is intended to ensure that the individual indices on all levels show the correct development through time, but leads to non-additivity (IMF,2005).</p>

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Advance release calendar

An advance release calendar is disseminated on www.statssa.gov.za

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
 National Library of South Africa, Cape Town Division
 Natal Society Library, Pietermaritzburg
 Library of Parliament, Cape Town
 Bloemfontein Public Library
 Johannesburg Public Library
 Eastern Cape Library Services, Qonce
 Central Regional Library, Polokwane
 Central Reference Library, Mbombela
 Central Reference Collection, Kimberley
 Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data are available via on-line services, diskette and computer printouts. For more details about our electronic data services, contact (012) 310 8600/8390/8351/4892/8496/8095.

Forthcoming issues	Issue	Expected release date
	January 2022	24 February 2022
	February 2022	31 March 2022
	March 2022	28 April 2022
