1. Introduction

The Quarterly Labour Force Survey (QLFS) is a household-based sample survey conducted by Statistics South Africa (Stats SA). It collects data on the labour market activities of individuals aged 15 years and older who live in South Africa. However, this report only covers labour market activities of persons aged 15–64 years.

Stats SA suspended face-to-face data collection for all its surveys on 19 March 2020 as a result of the COVID-19 pandemic and restricted movement. This was to ensure that the field staff and respondents were not exposed to the risk of contracting the coronavirus and to contain its spread. It is, however, imperative that Stats SA continues to provide statistics on the South African labour market. In this regard, Stats SA changed the mode of collection for collecting QLFS data to Computer-assisted Telephone Interviewing (CATI). To facilitate CATI, the sample that was used for QLFS Q1: 2020 was also used in Q2: 2020, Q3: 2020, Q4: 2020 and Q1: 2021. The COVID-19 restrictions limiting the movement of the general population in the country were eased prior to data collection of the QLFS in Q2: 2021. This allowed sample rotation to take place for the QLFS in Q2: 2021. Further, it allowed for face-to-face collection of telephone numbers for dwelling units in both the new sample (i.e. rotation group 2) and for dwelling units without contact details for the overlapping sample (i.e. rotation groups 1, 3 and 4) from Q1: 2020. Therefore, not all dwelling units on the sample had contact numbers, and as a result the data was only collected from the part of the sample for which contact numbers were available for QLFS Q2: 2021. The dwelling units for which contact numbers were not available as of Q2: 2021 retained the status that they had in Q1: 2021. That is, dwelling units that were out-of-scope in Q1: 2021 remained out-of-scope in Q2: 2021; dwelling units that were non-contacts in Q1: 2021 remained non-contacts in Q2: 2021. For the remaining Q2: 2021 sample with contact numbers, during data collection some of the contact numbers were found to be invalid, some were not answered, and some households in the sampled dwelling units indicated that they were no longer residing at the dwelling units they had occupied during Q1: 2021. All of these were regarded as non-contacts and were adjusted for during the weighting processes. The details of how the adjustment was done are contained in the Technical notes in this report.

Given the change in the survey mode of collection and the fact that Q2: 2021 estimates are not based on a full sample, comparisons with previous quarters should be made with caution.

This report presents the key findings of the QLFS conducted from April to June 2021 (Q2: 2021).

2. Highlights of the results

Table A: Key labour market indicators

	Apr-Jun 2020	Jan-Mar 2021	Apr-Jun 2021	Qtr-to-qtr change	Year-on- year change	Qtr-to-qtr change	Year-on- year change
	Thousand					Per cent	
Population 15–64 yrs	39 021	39 455	39 599	145	578	0,4	1,5

Employed	14 148	14 995	14 942	-54	793	-0,4	5,6
Formal sector (non-agricultural)	10 064	10 574	10 200	-375	136	-3,5	1,4
Informal sector (non-agricultural)	2 280	2 502	2 686	184	406	7,4	17,8
Agriculture	799	792	862	69	63	8,7	7,8
Private households	1 005	1 127	1 194	67	189	6,0	18,8
Unemployed	4 295	7 242	7 826	584	3 531	8,1	82,2
Not economically active	20 578	17 218	16 832	-386	-3 746	-2,2	-18,2
Discouraged work-seekers	2 471	3 131	3 317	186	846	5,9	34,3
Other (not economically active)	18 107	14 086	13 515	-571	-4 592	-4,1	-25,4
Rates (%)							
Unemployment rate	23,3	32,6	34,4	1,8	11,1		
Employed/population ratio (absorption)	36,3	38,0	37,7	-0,3	1,4		
Labour force participation rate	47,3	56,4	57,5	1,1	10,2		

Due to rounding, numbers do not necessarily add up to totals.

The working-age population increased by 145 000 or 0,4% in the second quarter of 2021 compared to the first quarter of 2021. Compared to Q2: 2020, the working-age population increased by 578 000 or 1,5%. The number of employed persons decreased by 54 000 to 14,9 million in Q2: 2021, while the number of unemployed persons increased by 584 000 to 7,8 million compared to Q1: 2021, resulting in an increase of 530 000 (up by 2,4%) in the number of people in the labour force. In spite of the increase in the number of discouraged work-seekers (up by 5,9%), the number of people who were not economically active for reasons other than discouragement decreased by 571 000 (down by 4,1%) between the two quarters, resulting in a net decrease of 386 000 in the not economically active population.

To better understand the observed large changes in the key labour market indicators between Q1: 2021 and Q2: 2021, special tabulations were done to study movements between labour market status categories. It was observed that a large number of persons moved from the "employed" status and "not economically active" to "unemployed" categories between the two quarters, which resulted in an increase of 1,8 percentage points in the unemployment rate to 34,4%. This is the highest unemployment rate recorded since the start of the QLFS in 2008. However, the labour force participation rate was also higher in Q2: 2021 as compared to Q1: 2021 as a result of these movements – increasing by 1,1 percentage points to 57,5%. The absorption rate decreased by 0,3 of a percentage point to 37,7% in the second quarter of 2021 compared to the first quarter of 2021.

The only employment decrease was observed in the formal sector (375 000) in Q2: 2021, while employment gains were observed in the informal sector (184 000), Agricultural sector (69 000) and Private households (67 000).

Compared to a year ago, total employment increased by 793 000. The number of unemployed persons increased by 82,2% (3,5 million), while the number of persons who were not economically active decreased by 18,2% (3,7 million).

3. Employment

Figure 1: Quarter-to-quarter changes in employment, Q2: 2015 to Q2: 2021

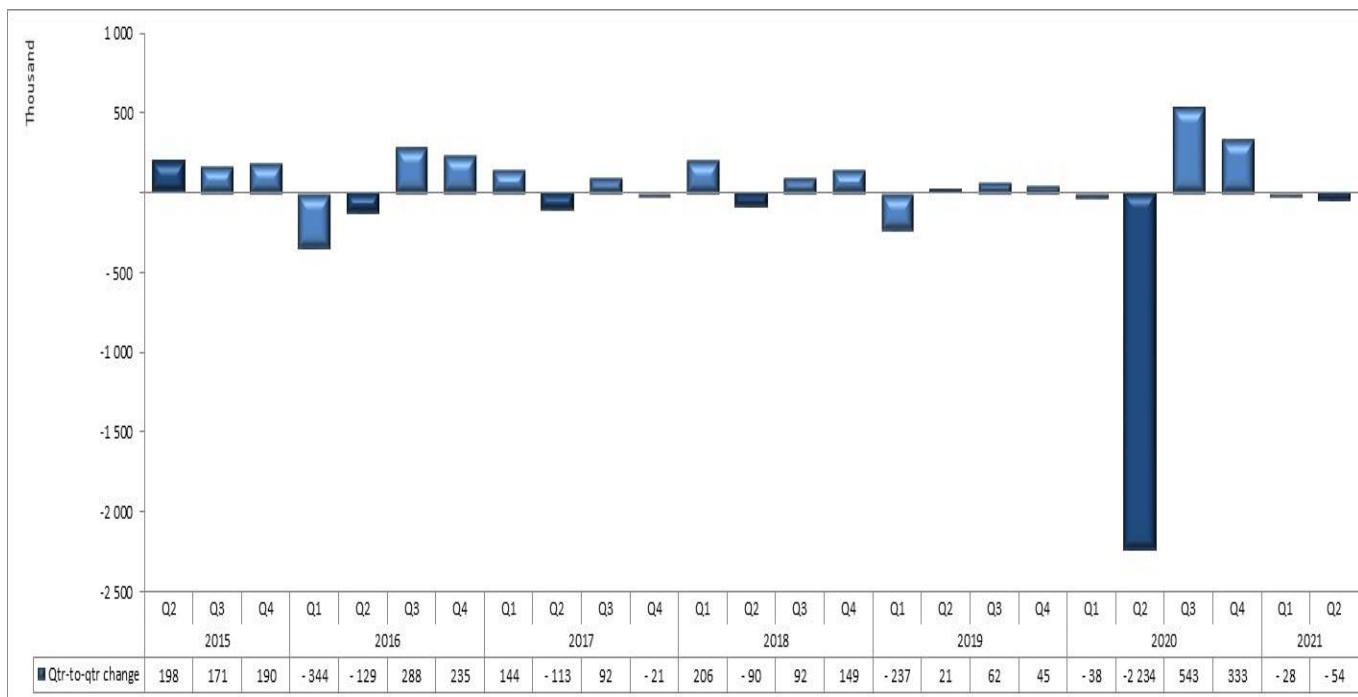

Figure 1 shows that employment has decreased by 54 000 in the second quarter of 2021 following a decrease of 28 000 in the previous quarter. The figure shows that employment has always decreased in the second quarter of each year since 2015, except for increases that were observed in 2015 and 2019. The results further confirm that this is the third decrease in employment since the national lockdown.

Table B: Employment by industry

Industry	Apr-Jun 2020	Jan-Mar 2021	Apr-Jun 2021	Qtr-to- qtr change	Year-on- year change	Qtr-to- qtr change	Year-on- year change
	Thousand					Per cent	
Total*	14 148	14 995	14 942	-54	793	-0,4	5,6
Agriculture	799	792	862	69	63	8,7	7,8
Mining	373	395	398	3	25	0,8	6,7
Manufacturing	1 456	1 497	1 415	-83	-41	-5,5	-2,8
Utilities	113	115	118	3	5	2,8	4,7
Construction	1 066	1 079	1 222	143	156	13,3	14,7
Trade	2 946	2 979	3 087	108	140	3,6	4,8
Transport	885	903	969	66	84	7,3	9,5
Finance	2 234	2 527	2 248	-278	14	-11,0	0,6
Community and social services	3 244	3 5567	3 401	-166	157	-4,6	4,9
Private households	1 005	1 127	1 194	67	189	6,0	18,8

*Note: Total includes 'Other' industries.

Due to rounding, numbers do not necessarily add up to totals.

Note: Utilities refers to Electricity, gas and water supply.

Trade refers to Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods; hotels and restaurants.

Finance refers to Financial intermediation, insurance, real estate and business services.

Table B shows that between Q1: 2021 and Q2: 2021, the number of employed persons decreased in three of the ten industries, with the largest decrease recorded in Finance (278 000), followed by Community and social services (166 000) and Manufacturing (83 000). The largest increases in employment were recorded in Construction (143 000) and Trade (108 000).

Compared to the same period last year, a net increase of 793 000 in total employment in Q2: 2021 was largely due to gains in the number of people employed in the Private households (189 000), Community and social services (157 000), Construction (156 000) and Trade (140 000) industries.

Figure 2a: Quarter-to-quarter employment changes in the formal sector, Q2: 2015 to Q2: 2021

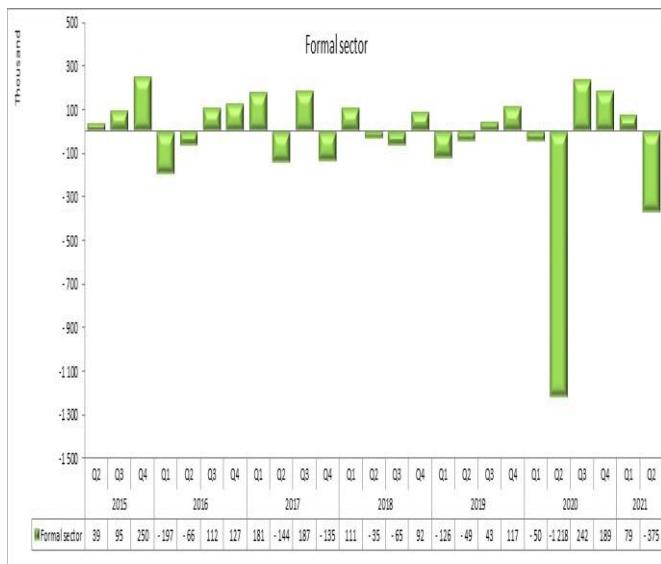

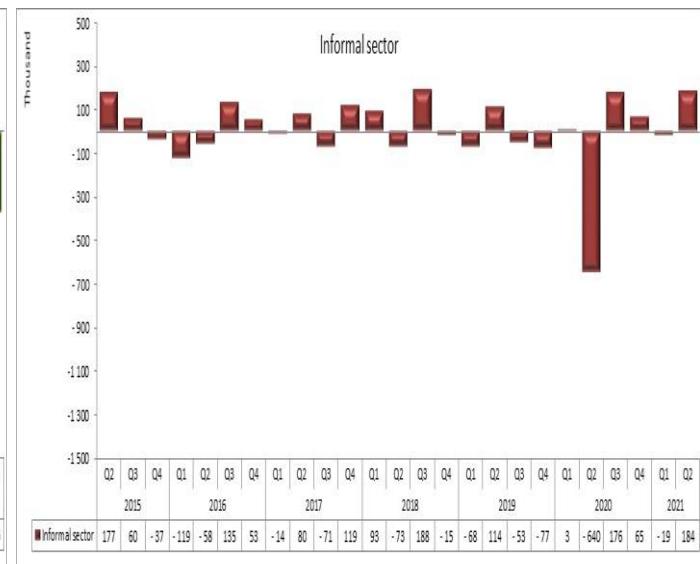

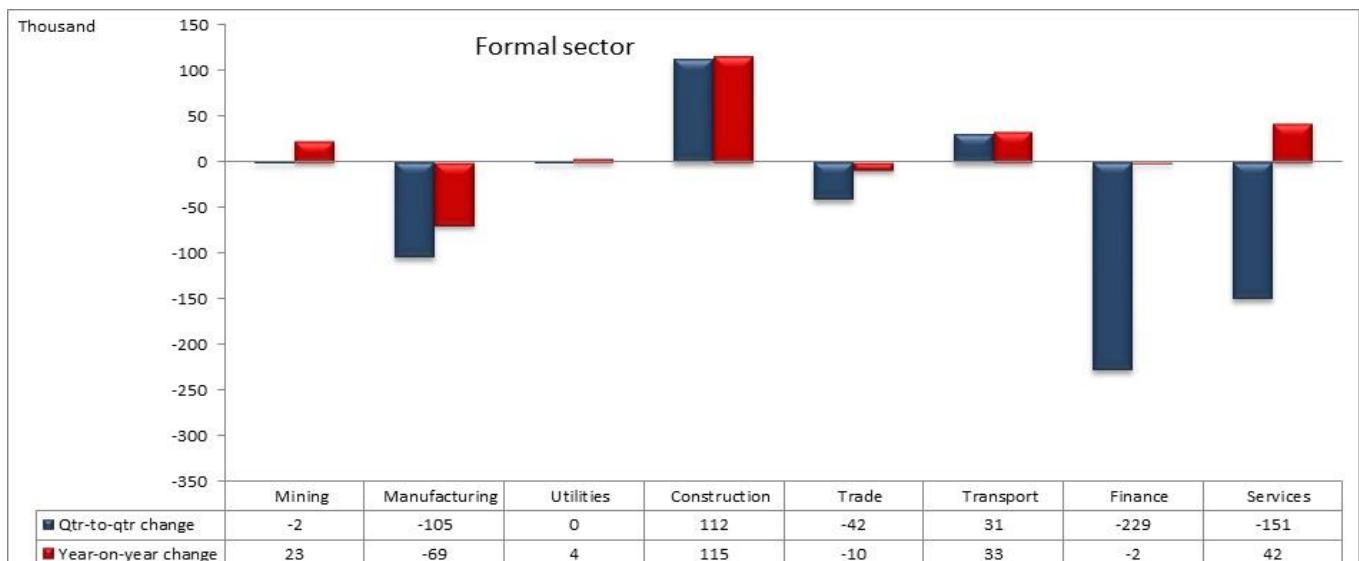

Figure 2b: Quarter-to-quarter employment changes in the informal sector, Q2: 2015 to Q2: 2021

Following a decrease in the informal sector employment in Q1: 2021 (19 000), employment increased by 184 000 in Q2: 2021 in this sector. Employment in the formal sector decreased by 375 000 in Q2: 2021 compared to Q1: 2021.

Figure 3: Quarter-to-quarter and year-on-year changes in the formal sector by industry

Note: Utilities refers to Electricity, gas and water supply.

Trade refers to Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods; hotels and restaurants.

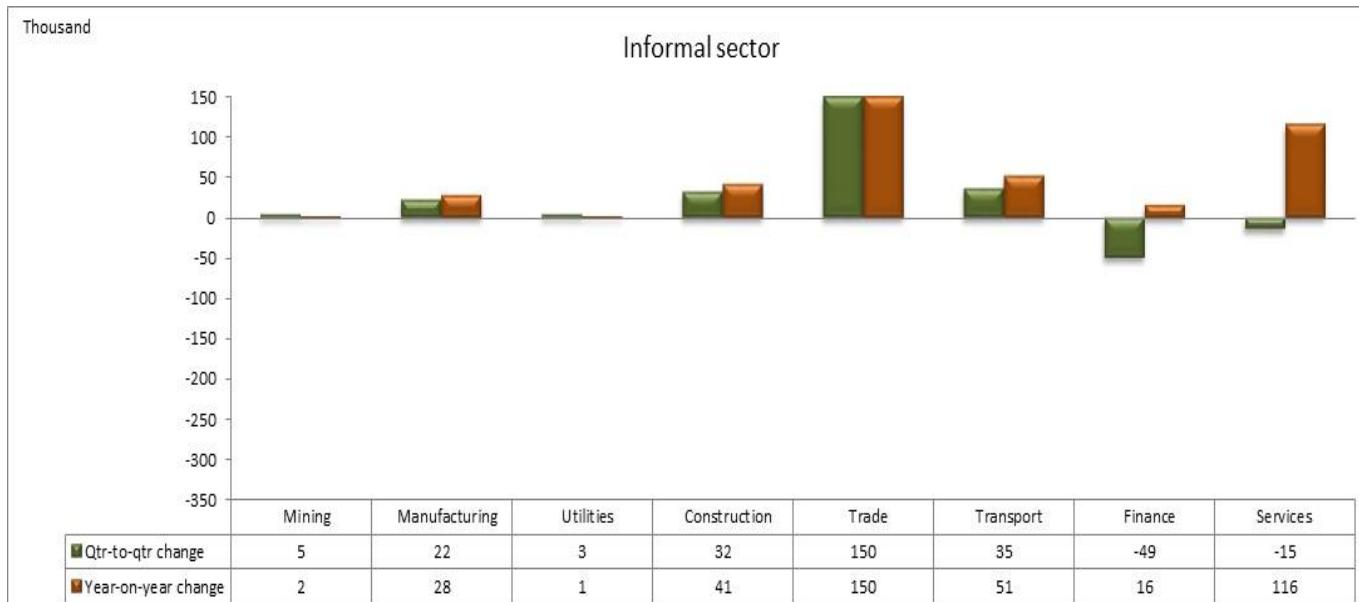

Finance refers to Financial intermediation, insurance, real estate and business services.

Services refers to Community, personal and social services.

Five out of eight industries in the formal sector employment recorded employment losses. A decrease of 375 000 in the formal sector employment was mainly driven by the Finance (229 000), Community and social services (151 000), Manufacturing (105 000), Trade (42 000) and Mining (2 000) industries. The biggest gains were recorded in the Construction (112 000) industry, followed by Transport (31 000), while Utilities remained unchanged.

Compared to a year ago, a net gain of 136 000 jobs in the formal sector employment was mainly driven by the Construction (115 000), Community and social services (42 000), Transport (33 000), Mining (23 000) and Utilities (4 000) industries in Q2: 2021.

Figure 4: Quarter-to-quarter and year-on-year changes in the informal sector by industry

Note: Utilities refers to Electricity, gas and water supply.

Trade refers to Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods; hotels and restaurants.

Finance refers to Financial intermediation, insurance, real estate and business services.

Services refers to Community, personal and social services.

In the second quarter of 2021, informal sector employment increased by 184 000 persons compared to the previous quarter. The gains in the informal sector employment were driven by the Trade (150 000), Transport (35 000), Construction (32 000), Manufacturing (22 000), Mining (5 000) and Utilities (3 000) industries.

Compared to Q2: 2020, the increases in employment in the informal sector were driven by the Trade (150 000), Community and social services (116 000), Transport (51 000), Construction (41 000), Manufacturing (28 000), Finance (16 000), Mining (2 000) and Utilities (1 000) industries.

Table C: Employment by occupation

Occupation	Apr-Jun 2020	Jan-Mar 2021	Apr-Jun 2021	Qtr-to-qtr change	Year-on- year change	Qtr-to-qtr change	Year-on- year change
						Thousand	
	Total	14 148	14 995	14 942	-54	793	-0,4
Manager	1 288	1 342	1 406	64	118	4,8	9,2
Professional	1 072	990	992	3	-80	0,3	-7,4
Technician	1 213	1 399	1 320	-80	106	-5,7	8,8
Clerk	1 470	1 595	1 474	-121	4	-7,6	0,2
Sales and services	2 302	2 483	2 322	-161	20	-6,5	0,9
Skilled agriculture	67	62	45	-17	-22	-27,4	-33,2
Craft and related trade	1 521	1 630	1 599	-31	78	-1,9	5,1
Plant and machine operator	1 217	1 285	1 242	-44	25	-3,4	2,0
Elementary	3 191	3 317	3 605	289	415	8,7	13,0
Domestic worker	745	848	892	44	147	5,2	19,7

*Note: Total includes 'Other' occupations.

Due to rounding, numbers do not necessarily add up to totals.

The largest decreases in employment were observed in the Sales and services occupations (down by 161 000), followed by Clerks (down by 121 000), Technicians (down by 80 000), Plant and machine operators (down by 44 000) and Craft and related trade (down by 31 000) occupations in Q2: 2021 compared to the previous quarter.

Year-on-year gains in employment were mainly driven by Elementary occupations (415 000), followed by Domestic worker (147 000), Manager (118 000), Technician (106 000), Craft and related trade (78 000), Plant and machine operator (25 000) and Sales and services (20 000) occupations. The only occupations that recorded losses in employment in Q2: 2021 compared to Q2: 2020 were Professional and Skilled agriculture at 80 000 and 22 000, respectively.

Table D: Employment by province

Province	Apr-Jun 2020	Jan-Mar 2021	Apr-Jun 2021	Qtr-to-qtr change	Year-on- year change	Qtr-to-qtr change	Year-on- year change
	Thousand					Per cent	
South Africa	14 148	14 995	14 942	-54	793	-0,4	5,6
Western Cape	2 179	2 309	2 256	-53	77	-2,3	3,5
Eastern Cape	1 169	1 301	1 235	-66	65	-5,1	5,6
Northern Cape	255	313	256	-57	1	-18,1	0,4
Free State	638	703	723	20	85	2,9	13,4
KwaZulu-Natal	2 297	2 429	2 421	-8	124	-0,3	5,4
North West	874	933	979	45	105	4,9	12,0
Gauteng	4 473	4 626	4 648	22	175	0,5	3,9
Mpumalanga	1 112	1 133	1 166	33	54	2,9	4,9
Limpopo	1 151	1 248	1 257	9	107	0,7	9,3

Due to rounding, numbers do not necessarily add up to totals.

Table D shows that the number of employed persons decreased in four provinces between Q1: 2021 and Q2: 2021. The largest employment decreases were recorded in Eastern Cape (down by 66 000), Northern Cape (down by 57 000), Western Cape (down by 53 000) and KwaZulu-Natal (down by 8 000). Employment gains were recorded in North West (45 000), Mpumalanga (33 000), Gauteng (22 000), Free State (20 000) and Limpopo (9 000) during the same period. Northern Cape had the biggest change in employment with a decrease of 18,1%, followed by Eastern Cape with a decrease of 5,1%.

Compared to Q2: 2020, the largest increases in employment were recorded in Gauteng (up by 175 000), KwaZulu-Natal (up by 124 000), Limpopo (up by 107 000) and North West (up by 105 000). Northern Cape recorded the least increase in the number of employed persons at 1 000. Free State had the biggest change in employment with an increase of 13,4%, followed by North West with an increase of 12,0%.

3.1 Conditions of employment for employees

Figure 5: Quarter-to-quarter changes in nature of employment contract

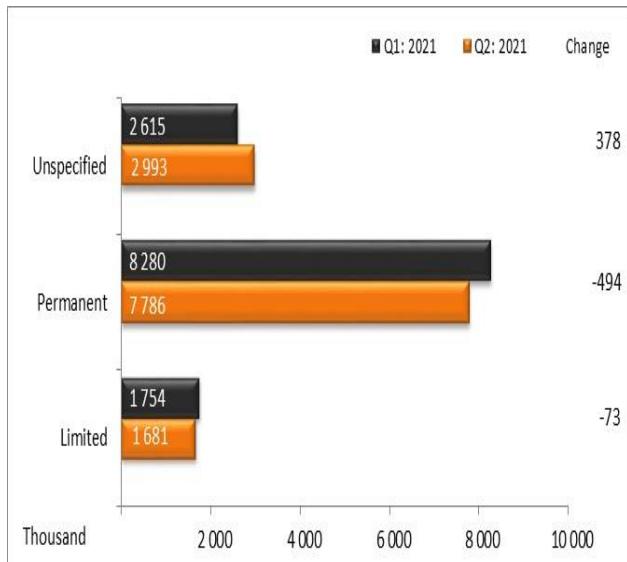

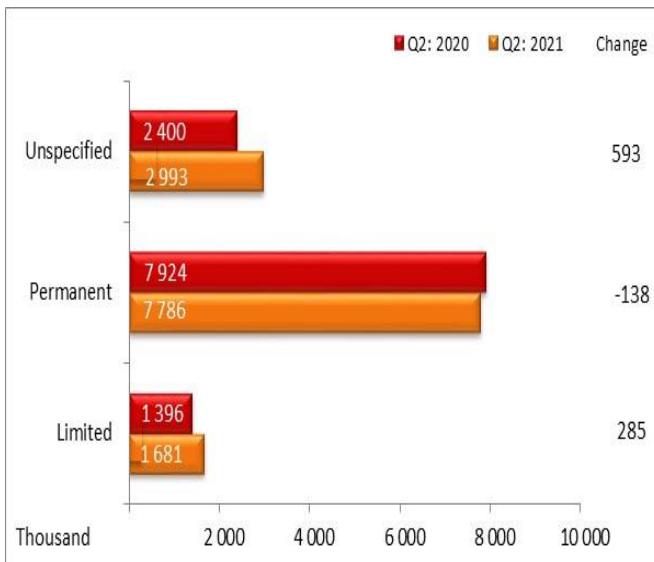

Figure 6: Year-on-year changes in nature of employment contract

Figures 5 and 6 show that the majority of employees had permanent employment contracts. Between the first and the second quarters of 2021, the number of employees with contracts of unspecified duration increased by 378 000, while those with contracts of a limited duration and contracts of a permanent nature decreased by 73 000 and 494 000, respectively.

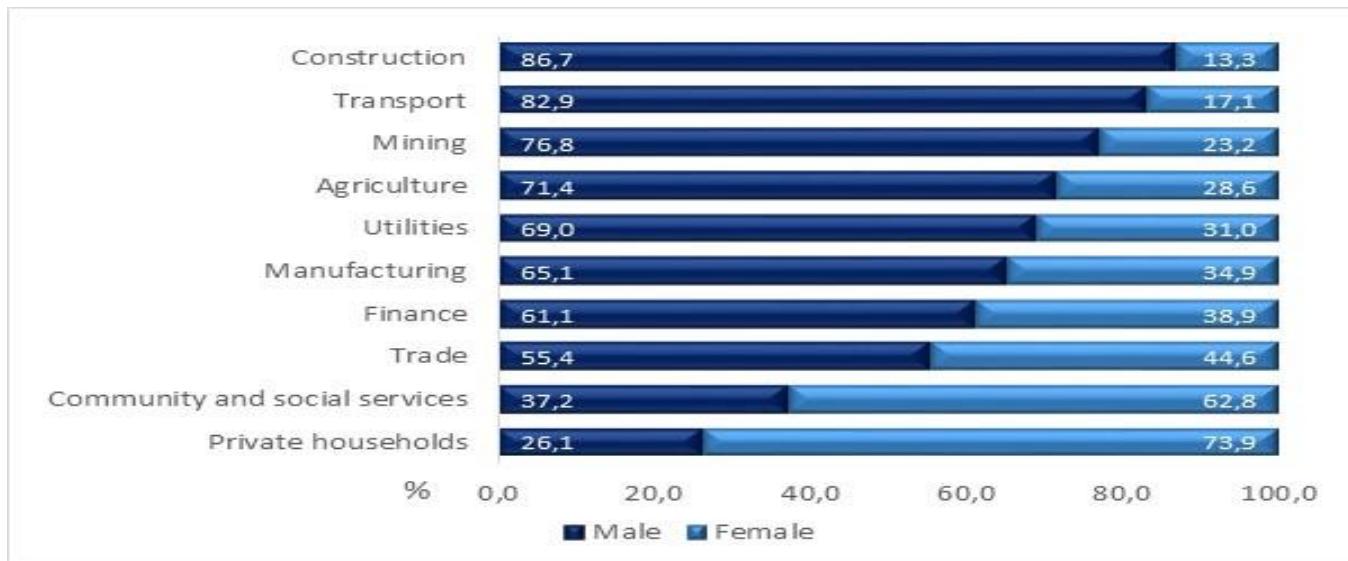

The year-on-year comparisons indicate that the number of employees with permanent employment contracts decreased by 138 000, while the number of employees with contracts of unspecified duration and contracts of limited duration increased by 593 000 and 285 000, respectively.

3.2 Additional analysis on employment in relation to COVID-19

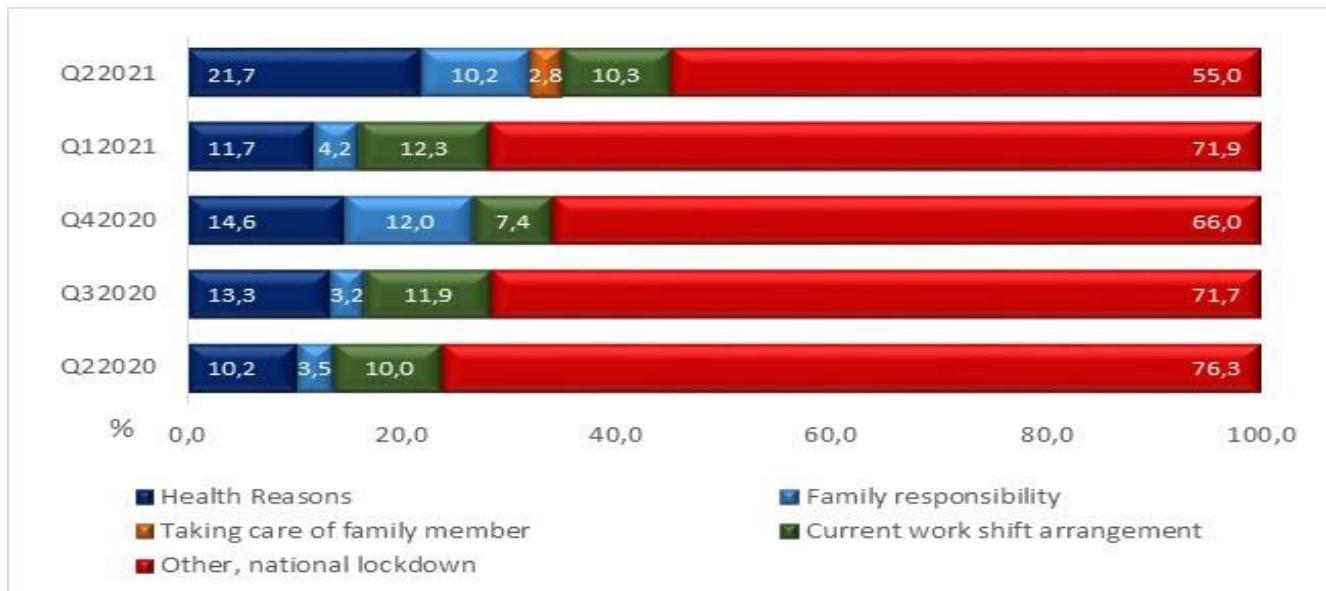

In a quest to protect South African citizens from the novel coronavirus, the government announced a national lockdown that brought about a shutdown of the economy, which in turn resulted in a shock in the labour market and a big change in the way people went about doing their work. Some additional questions were included in the Q2: 2021 questionnaire to capture these changes. These included whether people were working from their usual places of work or working from home; whether they continued to receive salaries during lockdown; whether they received full or reduced salaries; whether they would be returning to the same jobs/businesses after the lockdown; and whether they thought they might lose their jobs or that their businesses would close in the foreseeable future due to COVID-19. This section of the report focuses on indicators derived from these additional questions that were asked of only those who were employed.

Of the 14,9 million persons who were employed in Q2: 2021, almost four out of every five persons (82,7%) were expected to work during the national lockdown by the companies/organisations they work for.

Figure 7: Percentage distribution of those who worked during lockdown by industry and sex, Q2: 2021

There were 12,4 million persons who were expected to work by their companies and did some work during the national lockdown in Q2: 2021. These were predominantly men in most industries, except in the Community and social services and Private households industries, where the majority were women. Four out of every five people employed within the Construction industry who worked during the lockdown were men.

Figure 8: Reasons that prevented those expected to work from doing any work, Q2: 2020 to Q2: 2021

Some of the people with jobs indicated that they were expected to work during the national lockdown in Q2: 2021, but could not do any work during that period. About half (55,0%) of these people cited the national lockdown as the main reason for not actually working. This is 16,9 percentage points lower than in the previous quarter. Health reasons were cited by 21,7% of the employed people while the rest indicated that they did not work due to family responsibility (10,2%) or work shift arrangements (10,3%) in Q2: 2021.

Table E: Work location by province, Q1: 2021 and Q2: 2021

Province	Jan-Mar 2021			Apr-Jun 2021			Jan-Mar 2021	Apr-Jun 2021	Qtr-to-qtr change (%)
	Usual place of work	Work from home	Total	Usual place of work	Work from home	Total	% worked from home Q1: 2021	% worked from home Q2: 2021	
	Thousand			Thousand			%		
Western Cape	1 508	184	1 692	1 436	250	1 687	10,9	14,8	4,0
Eastern Cape	849	56	905	749	74	823	6,2	9,0	2,8
Northern Cape	230	5	235	180	6	186	2,1	3,2	1,0
Free State	534	29	563	571	25	596	5,2	4,1	-1,0
KwaZulu-Natal	1 931	95	2 026	2 079	65	2 144	4,7	3,0	-1,6
North West	513	31	544	482	28	510	5,6	5,5	-0,2
Gauteng	3 659	331	3 989	3 815	312	4 127	8,3	7,6	-0,7
Mpumalanga	980	57	1 037	1 089	44	1 133	5,5	3,9	-1,5
Limpopo	956	47	1 003	1 042	42	1 084	4,7	3,8	-0,8
South Africa	11 161	833	11 994	11 443	846	12 289	6,9	6,9	-0,1

Those who worked during the national lockdown were asked whether they were working from home or usual place of work. Table E shows that the majority worked from their usual place of work in both Q1: 2021 and Q2: 2021. In both Q1: 2021 and in Q2: 2021, 6,9% of the employees indicated that they worked from home. The proportion of those who worked from home was higher in Western Cape and Eastern Cape than in the other provinces. There was a decrease in the proportion of workers who worked from home in most provinces in Q2: 2021 compared to Q1: 2021. Only Western Cape, Eastern Cape and Northern Cape recorded increases in this regard.

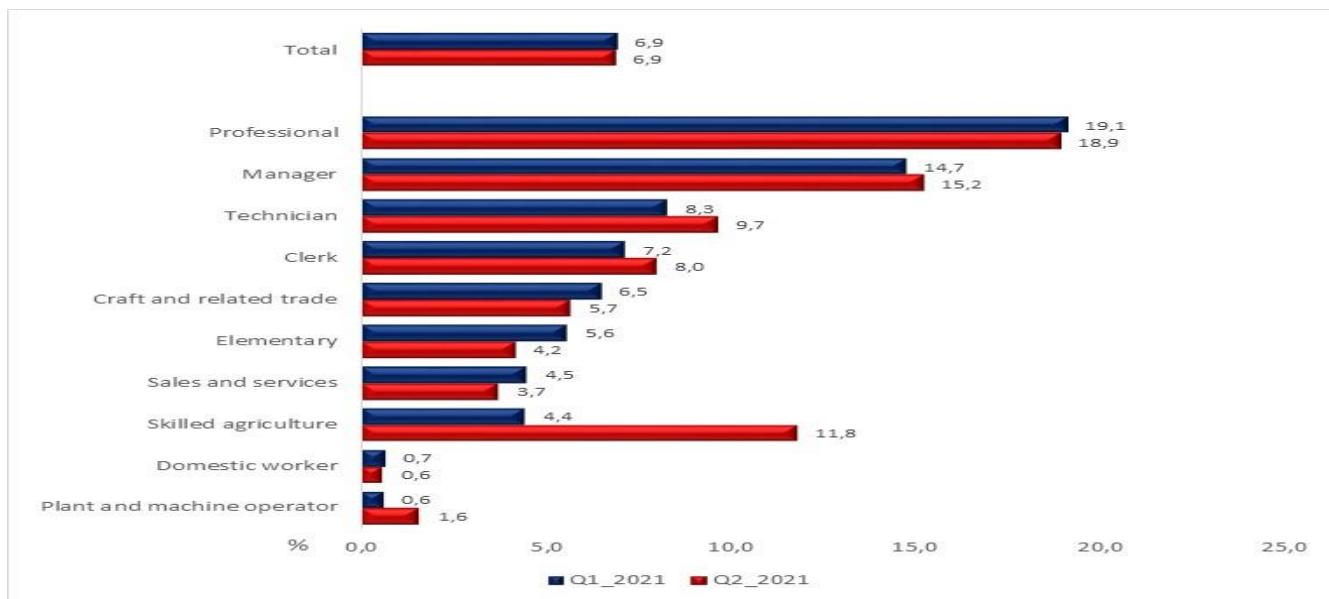

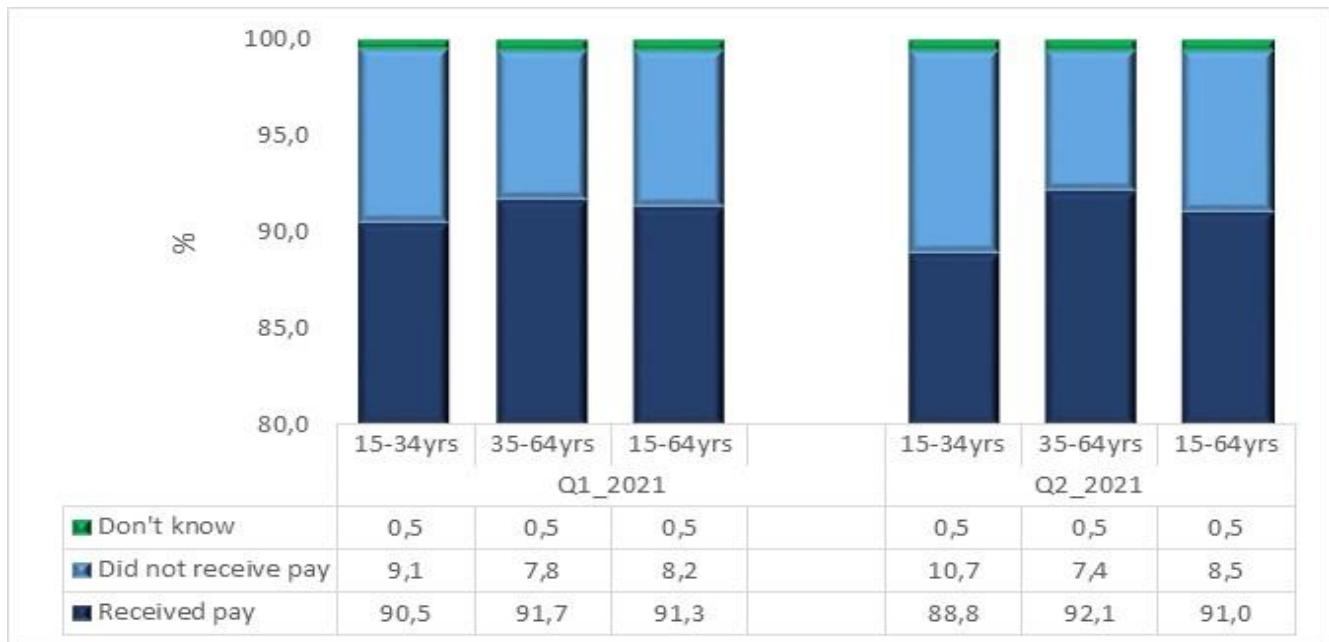

Figure 9: Work from home by occupation, Q1: 2021 and Q2: 2021

Figure 9 shows that the share of those who worked from home was higher among those in Professional (18,9%) and Managerial (15,2%) occupations, although there was a decline between the two quarters for professionals, indicating access to tools of trade to facilitate work from home for these workers. Domestic workers and Plant and machine operators were the least likely to work from home at 0,6% and 1,6%, respectively.

Figure 10: Percentage of those who received pay during lockdown by age group, Q1: 2021 and Q2: 2021

When asked if they continued to receive pay/salary from their jobs/businesses during the lockdown, 91,0% of all employed persons indicated that they did in Q2: 2021 – a 0,3 of a percentage point difference compared to Q1: 2021. Figure 10 shows that the proportion of employed persons who continued to receive pay/a salary during the lockdown decreased by 1,6 percentage points among the youth (15–34 years), and increased by 0,4 of a percentage point among the adults (35–64 years) in Q2: 2021 compared to Q1: 2021.

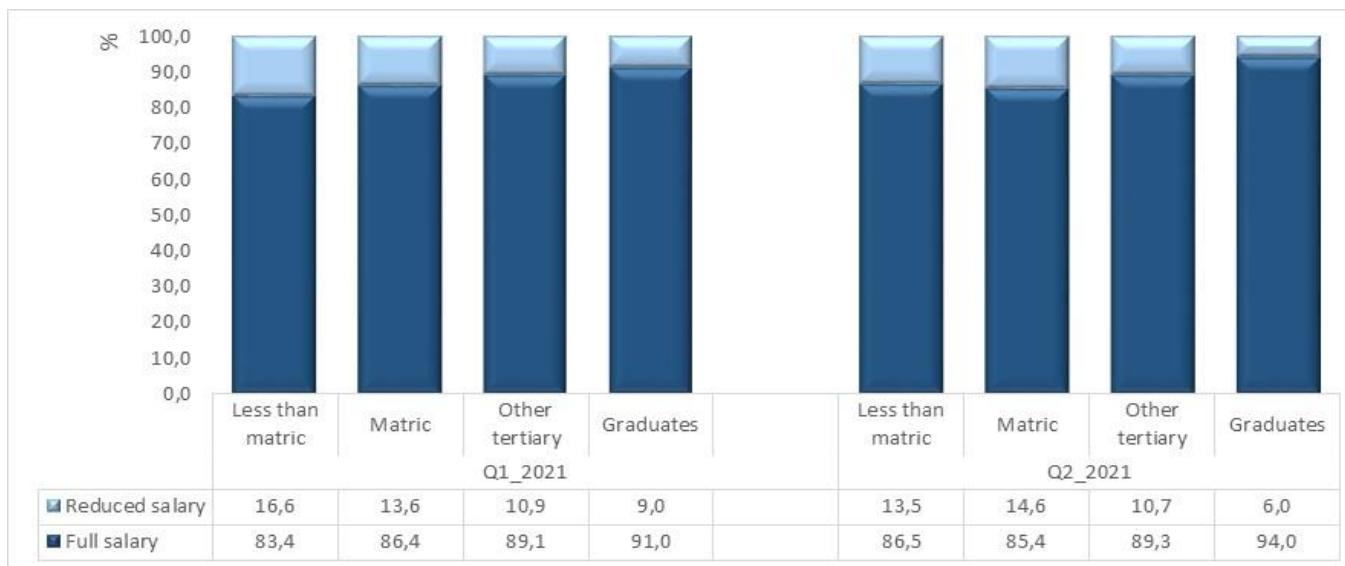

Figure 11: Employees who received full or reduced salaries by level of education, Q1: 2021 and Q2: 2021

Figure 11 shows that, of those who continued to receive pay during the lockdown, some had a reduction in their pay/salary during the lockdown. There seems to be some relationship between the level of education and reduction in pay/salary. Those with higher levels of education had higher chances of receiving a full salary than those with lower levels of education in both Q1: 2021 and Q2: 2021. About 9 in every 10 employed graduates (94,0%) continued to receive full salaries, compared to 86,5% of those with less than matric as their highest level of education in Q2: 2021.

Those who were employed during the national lockdown were also asked if they would be returning to the same job after lockdown: 94,9% indicated that they will; 1,6% indicated that they will not return to the same job; and 3,5% were not sure if they would return to the same job in Q2: 2021. Those who stated that they were not returning to the same job or were not sure were also asked if they thought they might lose their jobs or close their businesses in the four weeks succeeding the survey interview due to COVID-19, and 13,1% indicated that they thought they would in Q2: 2021. This was 2,0 percentage points lower than in Q1: 2021.

4. Unemployment and not in employment, education or training (NEET)

4.1 Unemployment

There are two definitions of unemployment used to describe form of unemployment: the official definition and the expanded definition of unemployment.

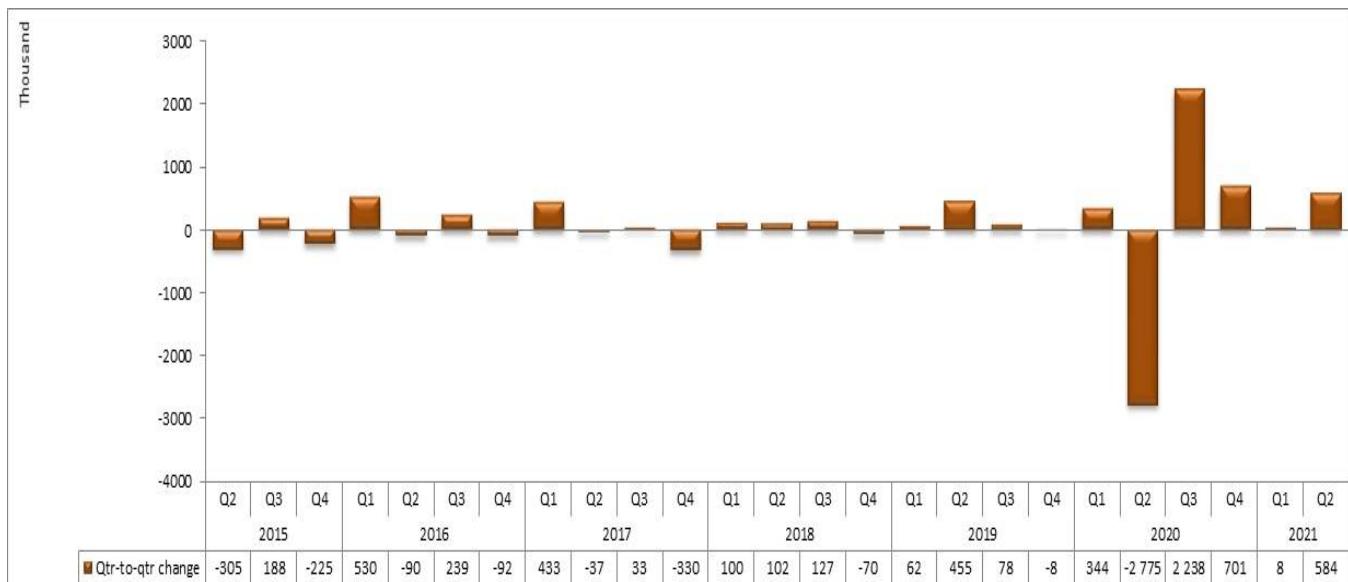

Unemployed persons according to the **Official definition** are those (aged 15–64 years) who:

- a) Were not employed in the reference week; **and**
- b) Actively looked for work or tried to start a business in the four weeks preceding the survey interview; **and**
- c) Were available for work, i.e. would have been able to start work or a business in the reference week; **or**
- d) Had not actively looked for work in the past four weeks, but had a job or business to start at a definite date in the future and were available.

Unemployed persons according to the **Expanded definition** are those (aged 15–64 years) who:

- a) Were not employed in the reference week; **and**
- b) Were available to work but did not look for work either because they are discouraged from looking for work (see definition of discouraged work-seeker) or did not look for work for other reasons other than discouragement.

Figure 12: Quarter-to-quarter changes in unemployment, Q2: 2015 to Q2: 2021

The number of unemployed persons increased by 584 000 in Q2: 2021 following an increase of 8 000 in the previous quarter. Notable from Figure 12 is that this is the fourth consecutive increase in unemployment since the COVID-19 national lockdown. However, it should be noted that during Q3: 2020, Q4: 2020, Q1: 2021 and Q2: 2021, the national lockdown regulations were relaxed, which allowed travelling. This played a role in people actively looking for work, whereas during Q2: 2020 the country was under hard lockdown that prevented movement.

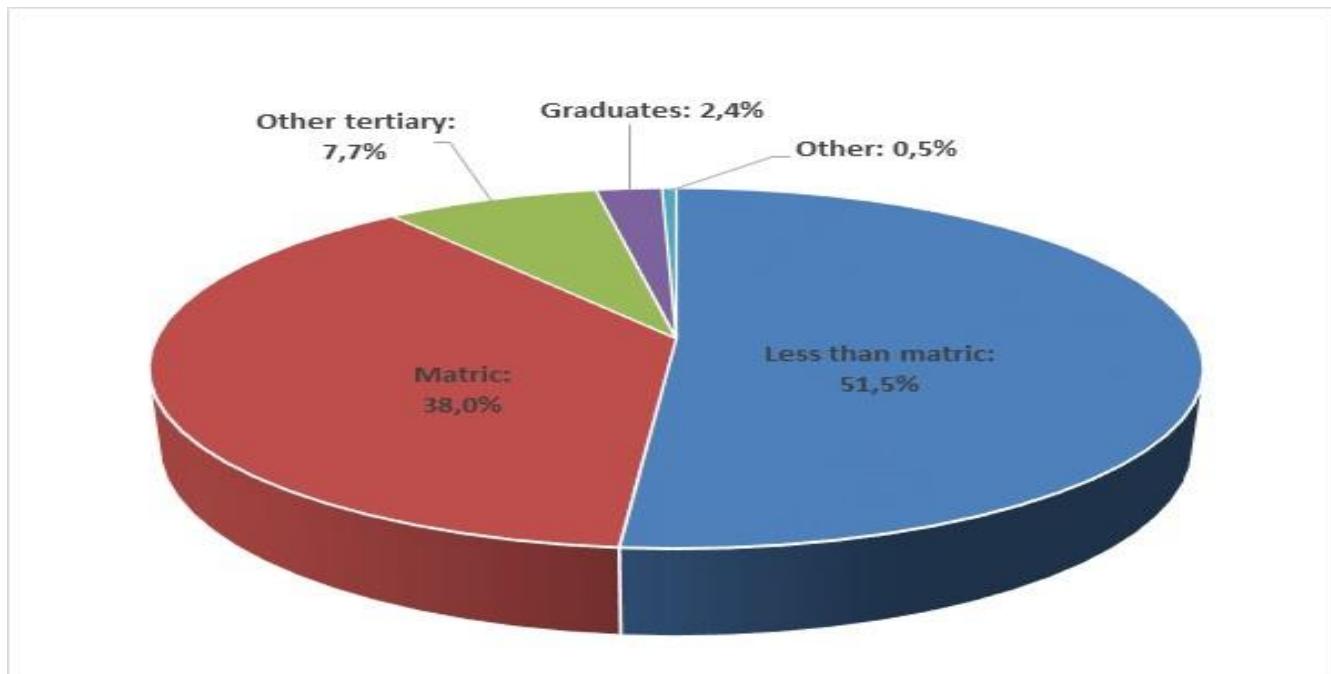

Figure 13: Proportion of the unemployed by education level, Q2: 2021

Figure 13 shows that of the 7,8 million unemployed persons in the second quarter of 2021, as many as 51,5% had education levels below matric, followed by those with matric at 38,0%. Only 2,4% of unemployed persons were graduates, while 7,7% had other tertiary qualifications as their highest level of education.

Table F: Unemployment rate by province

	Official unemployment rate					Expanded unemployment rate				
	Apr-Jun 2020	Jan-Mar 2021	Apr-Jun 2021	Qtr-to-qtr change	Year-on-year change	Apr-Jun 2020	Jan-Mar 2021	Apr-Jun 2021	Qtr-to-qtr change	Year-on-year change
	Per cent			Percentage points		Per cent			Percentage points	
	23,3	32,6	34,4	1,8	11,1	42,0	43,2	44,4	1,2	2,4
South Africa	23,3	32,6	34,4	1,8	11,1	42,0	43,2	44,4	1,2	2,4
Western Cape	16,6	23,7	25,8	2,1	9,2	27,3	27,9	29,1	1,2	1,8
Eastern Cape	39,6	43,8	47,1	3,3	10,2	52,8	49,6	53,0	3,4	0,2
Northern Cape	25,1	23,4	28,1	4,7	3,0	45,1	42,2	50,3	8,1	5,2
Free State	25,3	35,6	36,5	0,9	11,2	41,2	43,4	45,2	1,8	4,0
KwaZulu-Natal	18,9	30,5	32,5	2,0	13,6	46,2	46,4	47,1	0,7	0,9
North West	21,6	32,2	35,2	3,0	13,6	46,3	47,2	46,9	-0,3	0,6
Gauteng	26,4	34,4	35,4	1,0	9,0	38,7	41,6	42,7	1,1	4,0
Mpumalanga	13,3	33,5	35,2	1,7	21,9	45,4	47,6	46,5	-1,1	1,1
Limpopo	21,9	29,4	30,4	1,0	8,5	46,5	49,5	49,9	0,4	3,4

The official unemployment rate increased by 1,8 percentage points to 34,4% in Q2: 2021 compared to Q1: 2021. The official unemployment rate increased in all the nine provinces, with the largest increase recorded in Northern Cape (up by 4,7 percentage points), followed by Eastern Cape (up by 3,3 percentage points) and North West (up by 3,0 percentage points). Free State recorded the smallest increase of 0,9 of a percentage point, followed by Gauteng and Limpopo with 1,0 percentage point each.

Year-on-year, the official unemployment rate increased by 11,1 percentage points. The official unemployment rate increased in all the nine provinces, with the largest increase recorded in Mpumalanga (up by 21,9 percentage points), followed by KwaZulu-Natal and North West (up by 13,6 percentage points each), Free State (up by 11,2 percentage points) and Eastern Cape (up by 10,2 percentage points). Northern Cape recorded the lowest increase of 3,0 percentage points in the official unemployment rate during the same period.

The expanded unemployment rate increased by 1,2 percentage points in Q2: 2021 compared to Q1: 2021. This is reflective of the fact that people were available for work but did not actively look for work. Seven provinces recorded an increase in the expanded unemployment rate. Mpumalanga and North West recorded losses in expanded unemployment rate, where it decreased by 1,1 percentage points and 0,3 of a percentage point, respectively. The largest increase was recorded in Northern Cape (up by 8,1 percentage points), followed by Eastern Cape (up by 3,4 percentage points), Free State (up by 1,8 percentage points), Western Cape (up by 1,2 percentage points) and Gauteng (up by 1,1 percentage points). Compared to the same period last year, the expanded unemployment rate increased by 2,4 percentage points in Q2: 2021. All provinces recorded increases in the expanded unemployment rate. The largest increase in the expanded unemployment rate was recorded in Northern Cape (up by 5,2 percentage points), followed by Free State and Gauteng (up by 4,0 percentage points each), Limpopo (up by 3,4 percentage points), Western Cape (up by 1,8 percentage points) and Mpumalanga (up by 1,1 percentage points).

4.2 Not in employment, education or training (NEET)

Some young people have been discouraged with the labour market and they are also not building on their skills base through education and training – they are not in employment, education or training (NEET). The NEET rate serves as an important additional labour market indicator for young people.

Figure 14a: NEET rates for youth aged 15–24 years

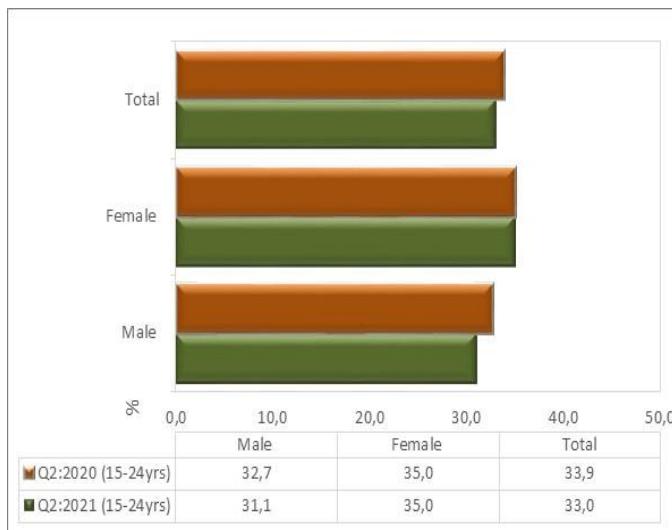

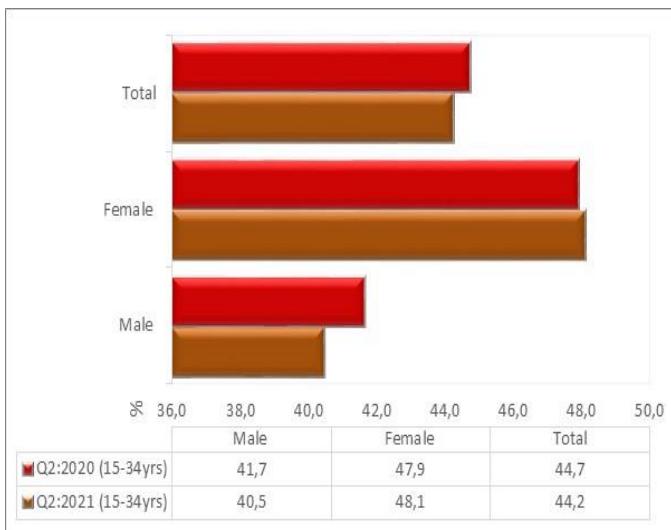

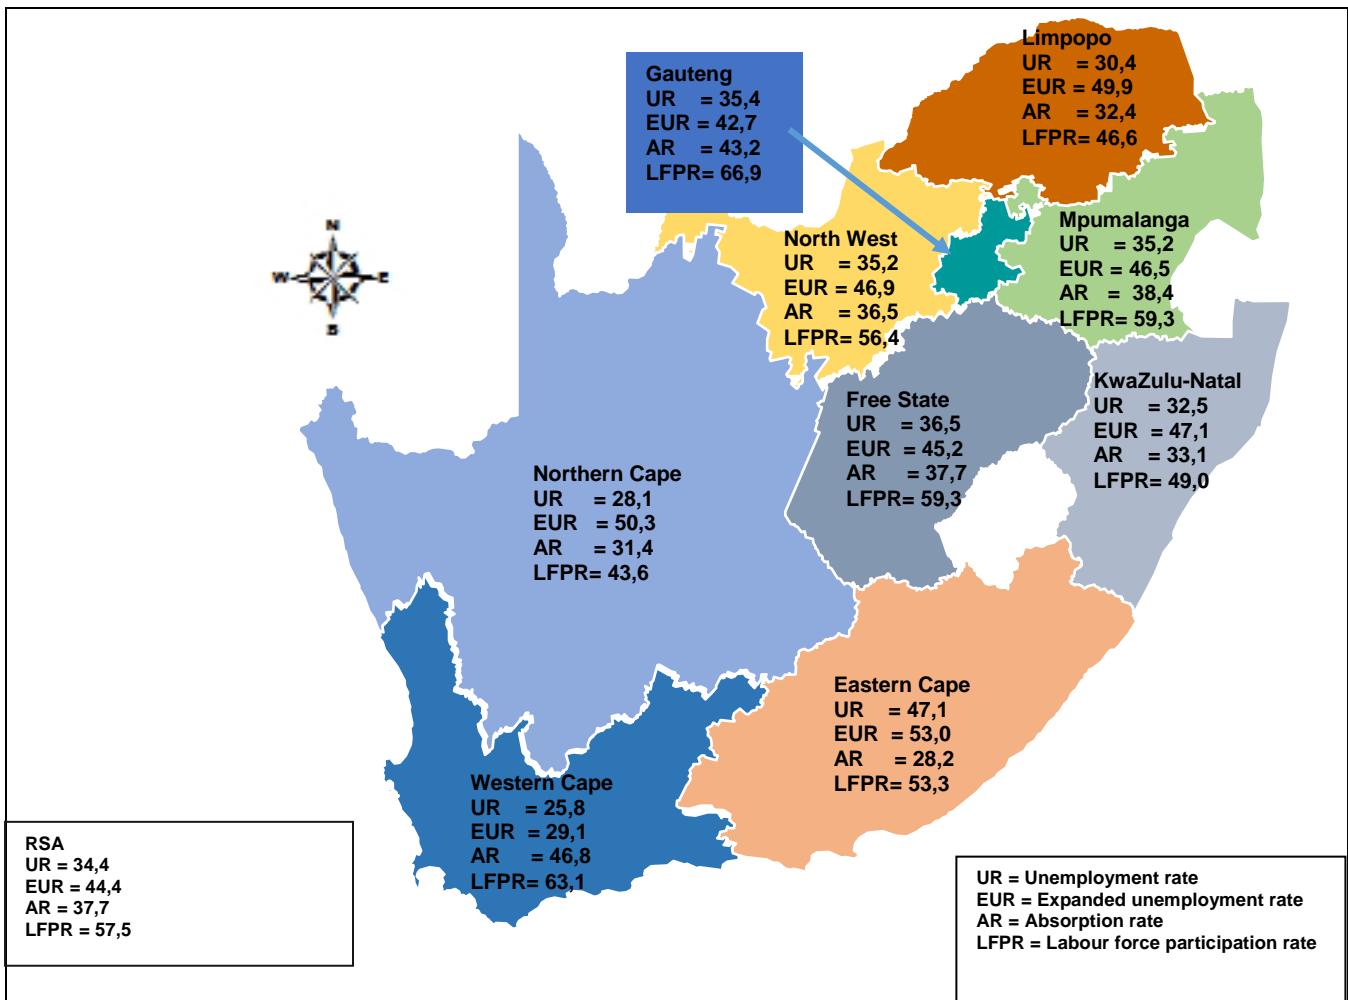

Figure 14b: NEET rates for youth aged 15–34 years by sex

There were about 10,2 million young people aged 15–24 years in Q2: 2021, of which 33,0% were not in employment, education or training (NEET) – 0,8 of a percentage point lower than in Q2: 2020. In this age group, the NEET rate for males decreased by 1,7 percentage points while the NEET rate for females remained unchanged. The NEET rate for females was higher than that of their male counterparts in both years (Figure 14a).

Compared to Q2: 2020, the percentage of young persons aged 15–34 years who were not in employment, education or training (NEET) decreased by 0,5 of a percentage point from 44,7% to 44,2% (out of 20,6 million) in Q2: 2021. The NEET rate for males decreased by 1,2 percentage points, while for females the rate increased by 0,2 of a percentage point in Q2: 2021. In both Q2: 2020 and Q2: 2021, more than four in every ten young males and females were not in employment, education or training (Figure 14b).

Figure 19: Unemployment rate by education status, Q2: 2013 to Q2: 2021

7. Comparison between the Quarterly Labour Force Survey (QLFS) and the Quarterly Employment Survey (QES)

Stats SA conducts two official sources of employment statistics surveys: the QES (which is establishment based) and the QLFS (which is household-based). Each survey has its strengths and limitations. For example, the QES cannot provide information on the following:

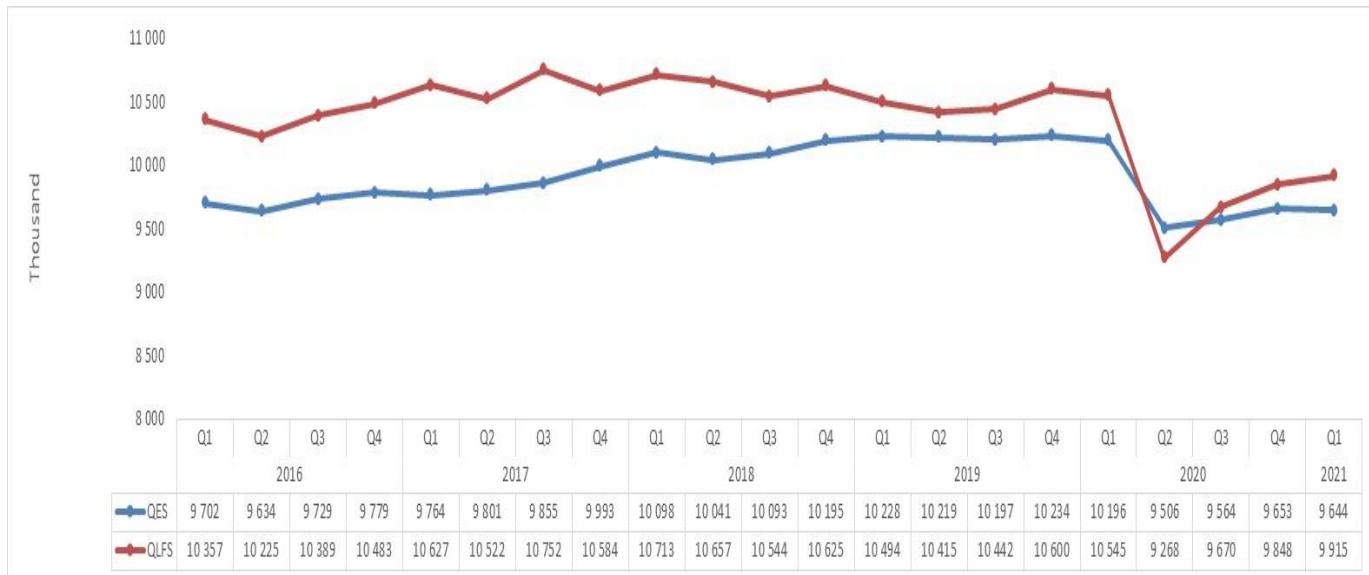

- Description of the employed, e.g. their demographic profile, education level, hours of work, etc.; and
- Unemployment and descriptors of the unemployed.

The QLFS is a survey of households that collects information from approximately 30 000 dwelling units and collects data on the labour market activities of individuals, whereas the QES is an enterprise-based survey that collects information from non-agricultural businesses and organisations from approximately 20 000 units. The numerous conceptual and methodological differences between the household- and enterprise-based surveys result in important distinctions in the employment estimates derived from the surveys. Among these are:

- The household-based survey includes agricultural workers, self-employed workers whose businesses are unincorporated, unpaid family workers, and private household workers among the employed; while these groups are excluded from the enterprise-based QES survey.
- The household-based survey is limited to workers 15 years of age and older, whereas the enterprise-based survey is not limited by age.
- The household-based survey has no duplication of individuals, because individuals are counted only once, even if they hold more than one job. In the enterprise-based survey, employees working at more than one job and thus appearing on more than one payroll are counted separately for each appearance.
- QLFS includes income tax, VAT and number of employees in determining the formal sector, while QES surveys enterprises with only VAT with annual turnover greater than R300 000.
- QLFS allows for proxy responses (a household member responding on behalf of the other). This can introduce misclassification of items, e.g. formal/informal classification.

Table G: Key differences between the QLFS and the QES

	QLFS	QES
Coverage	Private households and workers' hostels Non-institutional population (15 years and older) Total employment (including Informal sector, Private households, Agriculture and small businesses)	Payroll of VAT-registered businesses Employees only Formal sector, excluding Agriculture
Sample size	Quarterly sample of approximately 30 000 dwellings in which households reside	Quarterly sample of 20 000 non-agricultural formal- sector businesses
Reference period	One week prior to the interview	Payroll on the last day of the quarter
Standard Industrial Classification (SIC)	All industries	Excluding Agriculture and Private households
Formal sector definition (excluding Agriculture and Private households)	Employers and own-account workers registered for VAT or income tax Employees paying income tax and those not paying tax but working in firms with five or more workers	Employees on a payroll of VAT-registered businesses

Figure 20: Formal sector employment trends in QLFS and QES, Q1: 2016 to Q1: 2021

8. Technical notes

8.1 Response details

Table H: Response rates by province and metropolitan area

Province/metropolitan area	Apr-Jun 2021
National	60,0
Western Cape	59,1
Non-metro	49,5
City of Cape Town	63,7
Eastern Cape	63,6
Non-metro	61,3
Buffalo City	58,7
Nelson Mandela Bay	77,4
Northern Cape	57,3
Free State	69,5
Non-metro	70,3
Mangaung	67,8
KwaZulu-Natal	75,2
Non-metro	72,7
eThekwini	79,3
North West	47,4
Gauteng	45,5
Non-metro	32,9
Ekurhuleni	53,0
City of Johannesburg	40,9
City of Tshwane	51,8
Mpumalanga	69,1
Limpopo	71,0

8.2 Survey requirements and design

The Quarterly Labour Force Survey (QLFS) uses the Master Sample frame that has been developed as a general-purpose household survey frame that can be used by all other Stats SA household-based surveys having design requirements that are reasonably compatible with the QLFS. The 2013 Master Sample is based on information collected during the 2011 Census conducted by Stats SA. In preparation for Census 2011, the country was divided into 103 576 enumeration areas (EAs). The census EAs, together with the auxiliary information for the EAs, were used as the frame units or building blocks for the formation of primary sampling units (PSUs) for the Master Sample, since they covered the entire country and had other information that is crucial for stratification and creation of PSUs. There are 3 324 primary sampling units (PSUs) in the Master Sample, with an expected sample of approximately 33 000 dwelling units (DUs). The number of PSUs in the current Master Sample (3 324) reflects an 8,0% increase in the size of the Master Sample compared to the previous 2008 Master Sample (which had 3 080 PSUs). The larger Master Sample of PSUs was selected to improve the precision (smaller coefficients of variation, known as CVs) of the QLFS estimates.

The Master Sample is designed to be representative at the provincial level and within provinces at metro/non-metro levels. Within the metros, the sample is further distributed by geographical type. The three geography types used are Urban, Tribal and Farms. This implies, for example, that within a metropolitan area the sample is representative of the different geography types that may exist within that metro.

It is divided equally into four subgroups or panels called rotation groups. The rotation groups are designed in such a way that each of these groups has the same distribution pattern as that which is observed in the whole sample. They are numbered from one (1) to four (4), and these numbers also correspond to the quarters of the year in which the sample will be rotated for the particular group.

The sample for the QLFS is based on a stratified two-stage design with probability proportional to size (PPS) sampling of PSUs in the first stage, and sampling of dwelling units (DUs) with systematic sampling in the second stage.

8.3 Sample rotation

For each quarter of the QLFS, a quarter of the sampled dwellings are rotated out of the sample. These dwellings are replaced by new dwellings from the same PSU or the next PSU on the list. Thus, sampled dwellings are expected to remain in the sample for four consecutive quarters. It should be noted that the sampling unit is the dwelling, and the unit of observation is the household. Therefore, if a household moves out of a dwelling after being in the sample for two quarters (for example) and a new household moves in, the new household will be enumerated for the next two quarters. If no household moves into the sampled dwelling, the dwelling will be classified as vacant (or unoccupied).

8.4 Weighting

The sample weights were constructed in order to account for the following: the original selection probabilities (design weights); adjustments for PSUs that were sub-sampled or segmented; excluded population from the sampling frame (EAs with insufficient DUs); non-response; weight trimming; benchmarking to known population estimates from the Demographic Analysis Chief Directorate within Stats SA; and raking to bias-adjusted control estimates from a bias-adjustment procedure to compensate for the non-coverage bias in the sample due to only observing those households that can be contacted by telephone.

8.4.1 Non-response adjustment

In general, imputation is used for item non-response (i.e. blanks within the questionnaire) and edit failures (i.e. invalid or inconsistent responses). The eligible households in the sampled dwellings can be divided into two response categories: respondents and non-respondents. Weight adjustment is applied to account for the non-respondent households (e.g. refusal, no contact, etc.). The adjustment for total non-response was computed at two levels of non-response: PSU non-response and household non-response.

8.4.2 Calibrated survey weights

The calibrated sample weights are constructed such that all individuals within a household are assigned the same adjusted base weight. The adjusted base weights are calibrated such that the aggregate totals will match with independently derived population estimates (from the Stats SA Demographic Analysis Chief Directorate) for various age, race and gender groups at national level and individual metropolitan and non-metropolitan area levels within the provinces. The calibrated weights are constructed using the constraint that each person within the same household should have the same calibrated weight, with a lower bound on the calibrated weights set at 50.

8.4.3 Bias-adjustment procedure

The non-telephone households were not enumerated during the QLFS Q1: 2021 data collection because of COVID-19. Thus, the sample consisting of telephone-only households was a biased sample of the entire SA population due to differences in the characteristics of the telephone and non-telephone households, e.g. a significantly higher unemployment rate for the non-telephone households compared to the telephone households. The "Calibrated survey weights" defined in 8.4.2 would have been the final survey weights if both the telephone and non-telephone households sampled for Q1: 2021 were enumerated. Since only the telephone households were enumerated, we applied bias adjustment to the Q1: 2021 calibrated weights using the Q1: 2020 QLFS data. We computed the bias adjustment factors for various labour market dimensions (i.e. status, sector, industry and occupation) and demographic (i.e. age, race and gender groups) characteristics at national level and individual metropolitan and non-metropolitan area levels within provinces. The bias adjustment factors were computed as the ratio between the estimates for each cell of the selected variables (or cross-classification of the selected variables) for the combined (telephone and non-telephone) households and telephone-only households. The bias-adjustment factors based on the Q1: 2020 data were then used to compute the combined telephone and non-telephone estimates from the Q1: 2021 estimates that were based on the telephone sample only. These Q1: 2021 estimates will not be consistent with the demographic population estimates because the bias-adjustment factors are non-linear statistics. Therefore, the Q1: 2021 estimates that were adjusted for the non-telephone non-coverage bias were further adjusted to achieve consistency simultaneously with the known total population aged 15 and older, and the internal consistency across all variables (or cross-classification of variables). These adjusted estimates were then used as control totals to compute the final survey weights as described in the next sub-section.

8.4.4 Final survey weights

In the final step of constructing the sample weights, the calibrated sample weights were raked by applying the raking procedure twice with different sets of control totals at each stage of raking.

In the first application of the raking procedure, the following 4 control totals were used to compute the intermediate raked weights:

- Employment by Industry (13 cells)
- Employment by Occupation (13 cells)
- Sector (7 cells)
- Employment Status by Population Group (12 cells)

The intermediate raked weights computed above were further raked with the following 3 control totals to compute the final survey weights:

- Age by Gender (26 cells)
- Age by Population Group (52 cells)
- Age by Metro/Non-metro (51 cells)

The first application of the raking procedure uses employment status as control totals in various combinations with other variables. The second application of the raking procedure involves various combinations of population categories by age with gender, population group and metro/non-metro breakdown within the provinces. The advantage of applying the raking procedure twice would be that the population aged 15 and older would be consistent with the known population totals from Demographic Analysis. Moreover, the second application of raking would introduce variability in the estimates of employment/unemployment while correcting for the bias due to non-coverage of the non-telephone households.

8.5 Estimation

The final survey weights are used to obtain the estimates for various domains of interest, e.g. number of persons employed in Agriculture in Western Cape, the number of females employed in Manufacturing, etc.

8.6 Reliability of the survey estimates

Since estimates are based on sample data, they differ from figures that would have been obtained from complete enumeration of the population using the same instrument. Results are subject to both sampling and non-sampling errors. Non-sampling errors include biases from inaccurate reporting, processing, and tabulation, etc., as well as errors from non-responses and incomplete reporting. These types of errors cannot be measured readily. However, to some extent, non-sampling errors can be minimised through the procedures used for data collection, editing, quality control, and non-response adjustment. The variances of the survey estimates are used to measure sampling errors.

(i) Variance estimation

The most commonly used methods for estimating variances of survey estimates from complex surveys such as the QLFS are the Taylor-series Linearization, Jack-knife Replication, Balanced Repeated Replication (BRR), and Bootstrap methods (Wolter, 2007).¹ The Fay's BRR method has been used for variance estimation in the QLFS because of its simplicity.

(ii) Coefficient of variation

It is more useful in many situations to assess the size of the standard error relative to the magnitude of the characteristic being measured (the standard error is defined as the square root of the variance). The **coefficient of variation (cv)** provides such a measure. It is the **ratio of the standard error of the survey estimate to the value of the estimate itself expressed as a percentage**. It is very useful in comparing the precision of several different survey estimates, where their sizes or scales differ from one another.

(iii) P-value of an estimate of change

The p-value corresponding to an estimate of change is the probability of observing a value larger than the particular observed value under the hypothesis that there is no real change. If the p-value <0,01, the difference is highly significant; if p-value is between 0,01 and 0,05, the difference is significant; and if p-value >0,05, the difference is not significant.

9. Definitions

Discouraged work-seeker is a person who was not employed during the reference period, wanted to work, was available to work/start a business but did not take active steps to find work during the last four weeks, provided that the main reason given for not seeking work was any of the following: no jobs available in the area; unable to find work requiring his/her skills; lost hope of finding any kind of work.

Economic activities are those activities that contribute to the production of goods and services in the country. There are two types of economic activities, namely: (1) Market production activities (work done for others and usually associated with pay or profit); and (2) Non-market production activities (work done for the benefit of the household, e.g. subsistence farming).

Employed persons are those aged 15–64 years who, during the reference week, did any work for at least one hour, or had a job or business but were not at work (i.e. were temporarily absent).

Employment-to-population ratio (labour absorption rate) is the proportion of the working-age population that is employed.

¹Wolter, K.M. 2007. *Introduction to Variance Estimation, 2nd Edition*. New York: Springer-Verlag.

Informal employment identifies persons who are in precarious employment situations, irrespective of whether or not the entity for which they work is in the formal or informal sector. Persons in informal employment, therefore, comprise all persons in the informal sector, employees in the formal sector, and persons working in private households who are not entitled to or receive basic benefits such as pension or medical aid contributions from their employer, and who do not have a written contract of employment.

Informal sector: The informal sector has the following two components:

- i) Employees working in establishments that employ fewer than five employees, who do not deduct income tax from their salaries/wages; and
- ii) Employers, own-account workers and persons helping unpaid in their household business who are not registered for either income tax or value-added tax.

The **labour force** comprises all persons who are employed, plus all persons who are unemployed.

Labour force participation rate is the proportion of the working-age population that is either employed or unemployed.

Long-term unemployment: Persons in long-term unemployment are those individuals among the unemployed who were without work and trying to find a job or start a business for one year or more.

Not economically active: Persons aged 15–64 years who are neither employed nor unemployed in the reference week.

Persons in **underemployment (time-related)** are employed persons who were willing and available to work additional hours, whose total number of hours actually worked during the reference period were below 35 hours per week.

Under-utilised labour comprises three groups that are defined as follows: persons who are underemployed, persons who are unemployed, and persons who are discouraged.

Unemployed persons according to the **Official definition** are those (aged 15–64 years) who:

- a) Were not employed in the reference week; **and**
- b) Actively looked for work or tried to start a business in the four weeks preceding the survey interview; **and**
- c) Were available for work, i.e. would have been able to start work or a business in the reference week; **or**
- d) Had not actively looked for work in the past four weeks, but had a job or business to start at a definite date in the future and were available.

Unemployed persons according to the **Expanded definition** are those (aged 15–64 years) who:

- a) Fall under official unemployment (searched and available); **and**
- b) Were available to work but are/or:
 - Discouraged work-seekers
 - Have other reasons for not searching

Unemployment rate is the proportion of the labour force that is unemployed.

The **working-age population** comprises all persons aged 15–64 years.

Appendix 1

Table 1: Population of working age (15–64 years)									
	Apr-Jun 2020	Jul-Sep 2020	Oct-Dec 2020	Jan-Mar 2021	Apr-Jun 2021	Qtr-to-qtr change	Year-on- year change	Qtr-to-qtr change	Year-on- year change
	Thousand	Thousand	Thousand	Thousand	Thousand	Thousand	Thousand	Per cent	Per cent
Both sexes	39 021	39 167	39 311	39 455	39 599	145	578	0,4	1,5
Women	19 696	19 767	19 837	19 907	19 977	70	281	0,4	1,4
Men	19 325	19 400	19 474	19 548	19 623	74	298	0,4	1,5
Population groups	39 021	39 167	39 311	39 455	39 599	145	578	0,4	1,5
Black/African	31 575	31 720	31 865	32 007	32 152	145	578	0,5	1,8
Coloured	3 508	3 517	3 523	3 531	3 537	6	29	0,2	0,8
