STATISTICAL RELEASE

P6420

Food and beverages (Preliminary)

June 2022

The results published in the next publication (July 2022) will be based on a new sample. This is an annual procedure which typically affects the level of income at both current and constant prices. To avoid breaks in time series and to minimise revisions to historical growth rates, historical income levels will be revised (i.e. they will be linked to the estimates based on the new sample).

Embargoed until:
22 August 2022
13:00

Income at constant 2019 prices: results for June 2022

Table A – Year-on-year percentage change in food and beverages income at constant 2019 prices by type of income

Type of income	Jan-22	Feb-22	Mar-22	Apr-22	May-22	Jun-22
Food sales	40,7	20,8	17,7	14,6	7,6	21,6
Bar sales	164,0	-12,3	-10,5	-0,9	0,5	9,8
Other income	30,6	16,4	8,4	13,4	13,9	35,4
Total	46,4	17,1	14,6	13,1	7,1	20,8

Measured in real terms (constant 2019 prices), total income generated by the food and beverages industry increased by 20,8% in June 2022 compared with June 2021. The largest annual growth rates were recorded for:

- 'other' income (35,4%); and
- income from food sales (21,6%) – see Table A.

Table B – Year-on-year percentage change in food and beverages income at constant 2019 prices by type of enterprise

Type of enterprise	Jan-22	Feb-22	Mar-22	Apr-22	May-22	Jun-22
Restaurants and coffee shops	67,3	8,1	9,6	11,0	2,4	18,6
Takeaway and fast-food outlets	35,9	18,7	22,2	12,3	9,3	15,8
Catering services	12,4	48,6	15,3	22,8	17,5	40,8
Total	46,4	17,1	14,6	13,1	7,1	20,8

In June 2022, the main contributor to the 20,8% year-on-year increase was restaurants and coffee shops (18,6% and contributing 9,0 percentage points) – see Tables B and 6.

Table C – Food and beverages income at constant 2019 prices for the latest three months by type of enterprise

Type of enterprise	Apr – Jun 2021 (R million)	Weight	Apr – Jun 2022 (R million)	% change between Apr – Jun 2021 and Apr – Jun 2022	Contribution (% points) to the total % change
Restaurants and coffee shops	6 617,3	50,0	7 292,6	10,2	5,1
Takeaway and fast-food outlets	4 700,2	35,5	5 281,4	12,4	4,4
Catering services	1 913,6	14,5	2 418,6	26,4	3,8
Total	13 231,1	100,0	14 992,6	13,3	13,3

Total income increased by 13,3% in the second quarter of 2022 compared with the second quarter of 2021. The main contributors to this increase were:

- restaurants and coffee shops (10,2% and contributing 5,1 percentage points); and
- takeaway and fast-food outlets (12,4% and contributing 4,4 percentage points) – see Table C.

Figure 1 – Food and beverages income at constant 2019 prices: year-on-year percentage change

Figure 2 – Food and beverages income at constant 2019 prices by type of enterprise, seasonally adjusted

Figure 3 – Food and beverages income at constant 2019 prices

Seasonally adjusted income for the food and beverages industry increased by 0,1% in June 2022 compared with May 2022. This followed month-on-month changes of 0,3% in May 2022 and 4,1% in April 2022 – see Tables 3 and 7.

Survey information

Introduction	The results presented in this publication are derived from the monthly survey of the food and beverages industry. This survey is based on a sample drawn from the 2021 business sampling frame (BSF) that contains businesses registered for value added tax (VAT).
Purpose of the survey	<p>The food and beverages survey is a monthly survey covering a sample of public and private enterprises involved in the preparation of meals and drinks for immediate consumption in South Africa. The purpose of this survey is to monitor trends in the food and beverages industry.</p> <p>The results of the food and beverage survey are used to compile estimates of the tourism satellite accounts (TSA) and the gross domestic product (GDP) and its components, which are used to develop and monitor government policy. These statistics are also used in the analysis of comparative business and industry performance.</p>
Scope of the survey	<p>This survey covers the following tax registered private and public enterprises, that are mainly engaged in providing food and beverages for immediate consumption:</p> <ul style="list-style-type: none"> • restaurants and coffee shops; • takeaway and fast-food outlets; and • catering services.
Classification by industry	The 1993 edition of the <i>Standard Industrial Classification of all Economic Activities</i> (SIC), Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 <i>International Standard Industrial Classification of all Economic Activities</i> (ISIC) with suitable adaptations for local conditions. Each enterprise is classified to an industry which reflects its predominant activity. Statistics in this publication are presented at 5-digit SIC level.
Collection rate	The preliminary collection rate for the survey on food and beverages for June 2022 was 85,3%. The revised collection rate for May 2022 was 88,2%.
Statistical unit	The statistical unit for which information is compiled and published is an enterprise, defined as a legal unit or a combination of legal units that includes and directly controls all functions necessary to carry out its income activities. The statistical units are derived from and linked to the South African Revenue Service (SARS) administrative data.
Revised figures	Revised figures are mainly due to late submission of data to Stats SA, or respondents reporting revisions or corrections to their figures. Preliminary figures, as indicated in the relevant tables, are subject to change and when revised will not be indicated as such. Data are edited at the enterprise level.
Rounding-off of figures	Where figures have been rounded off, discrepancies may occur between sums of the component items and the totals.
Historical data	Historical food and beverages data are available on the Stats SA website. To access the data electronically, use the following link: Click to download historical data
Past publications	Past food and beverages releases are available on the Stats SA website. To access the releases electronically, use the following link: Click to download past releases
Technical notes	
Survey methodology and design	<p>The survey was conducted by mail, fax and telephone.</p> <p>A sample of 920 enterprises was drawn from a population of 10 241 enterprises using stratified simple random sampling in April 2021. The enterprises were first stratified at 5-digit level according to the SIC and then by size of enterprises. Large enterprises are completely enumerated. Turnover was used as the measure of size.</p>

Class limits

The enterprises are divided into four size groups according to turnover. Large enterprises are enterprises with an annual turnover of R32,5 million and more. The cut-off points which define the size groups, namely large, medium, small and very small enterprises are given in Table G.

Table G – Measure of size classes (Rand)

Enterprise size	Size group	Lower limits	Upper limits
Very small	4	574 434	12 750 000
Small	3	12 750 001	15 000 000
Medium	2	15 000 001	32 500 000
Large	1	32 500 001	

Sample weighting

For those strata not completely enumerated, the weights to produce estimates are the inverse ratio of the sampling fraction, modified to take account of non-collection in the survey. Stratum estimates are calculated and then aggregated with the completely enumerated stratum to form subgroup estimates. These procedures are in line with international best practice.

Seasonal adjustment

Seasonally adjusted estimates are generated each month using the X-12-ARIMA Seasonal Adjustment Program developed by the United States Census Bureau. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be recognised more clearly. Seasonal adjustment does not aim to remove irregular or non-seasonal influences which may be present in any particular month. Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series even after adjustment for seasonal variations. Therefore, the month-to-month movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour. The X-12-ARIMA procedure for food and beverages income is described in more detail on the Stats SA website at: [Click to download seasonal adjustment food and beverages April 2022](#)

Trend cycle

The trend is the long-term pattern or movement of a time series. The X-12-ARIMA Seasonal Adjustment Program is used for smoothing seasonally adjusted estimates to estimates of the underlying trend cycle.

Reliability of estimates

Data presented in this publication are based on information obtained from a sample and are, therefore, subject to sampling variability; that is, it may differ from the figures that would have been produced if the data had been obtained from all enterprises in the food and beverages industry in South Africa.

Relative standard error

One measure of the likely difference is given by the standard error (SE), which indicates the extent to which an estimate might have varied by chance because only a sample of enterprises was used. The relative standard error (RSE) provides an immediate indication of the percentage errors likely to have occurred due to sampling, and thus avoids the need to refer to the size of the estimate.

Table H – Estimate of total food and beverages industry income within 95 confidence limits – June 2022

	Lower limit (R million)	Income (R million)	Upper limit (R million)	Relative standard error (RSE)
Total income	4 270,8	5 508,6	6 746,2	11,5

Non-sampling errors

Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in the collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to minimise non-sampling errors by careful design of questionnaires, testing them in pilot studies, editing reported data and implementing efficient operating procedures. Non-sampling errors occur in both sample surveys and censuses.

Constant prices	Food and beverages income at constant prices by type of enterprise and by type of income is estimated by deflating income at current prices using the relevant components of the consumer price index for restaurants.														
Year-on-year percentage change	The year-on-year percentage change in a variable for any given period is the change between that period and the corresponding period of the previous year, expressed as a percentage of the latter.														
Contribution (percentage points)	The contribution (percentage points) to the annual percentage change for any given period is calculated by multiplying the percentage change of each type of enterprise by its corresponding weight, divided by 100. The weight is the percentage contribution of each type of enterprise to total income in the corresponding period of the previous year. The same result is given by $T \times [\Delta C / \Delta T]$, where T = change in the total, ΔC = change in the component (in rands), and ΔT = change in the total (in rands).														
Glossary															
Enterprise	A legal unit or a combination of legal units that includes and directly controls all functions necessary to carry out its activities.														
Industry	It is a group of enterprises engaged in the same or similar kinds of economic activity. Industries are defined in the <i>System of National Accounts</i> (SNA) in the same way as in the <i>Standard Industrial Classification of all Economic Activities</i> (SIC), Fifth Edition, Report No. 09-90-02 of January 1993.														
Income from food sales	Refers to income from the sale of meals and non-alcoholic drinks.														
Income from bar sales	Refers to income from liquor sales.														
Other income	Includes all income not earned from bar or food sales.

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
Eastern Cape Library Services, Qonce
Central Regional Library, Polokwane
Central Reference Library, Mbombela
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data is available via online services. For more detail about our electronic services, contact Stats SA's user information service at (012) 310 8600.

You can visit us on the internet at: www.statssa.gov.za
