## **1. Introduction**

### **1.1 Aim and collection unit**

This publication presents estimates in respect of the Census of Commercial Agriculture (CoCA), 2017 – North West. The survey aims to provide financial, production, employment and related information for the commercial agriculture industry in South Africa.

The last CoCA was conducted in 2007 (Reports No. 11-02-08 (2007)).

It is important to note that in 2007 the collection unit was a farming enterprise. The collection unit for CoCA 2017 is a farming unit, where a farming unit consists of one or more farms, holdings or pieces of land, whether adjacent or not, operated as a single unit and situated within the same local municipality. In this report, the word farm means farming unit.

### **1.2 Scope and coverage**

CoCA 2017 covers enterprises registered for value added tax (VAT) and which are mainly or primarily engaged in the following activities classified according to the January 1993 edition of the Standard Industrial Classification of all Economic Activities (SIC), Fifth edition.

- Growing of crops, market gardening and horticulture (SIC 111),
- Farming of animals (SIC 112),
- A combination of the above (mixed farming) (SIC 113),
- Agricultural and animal husbandry services, except veterinary activities (SIC 114), and
- Game propagation, including related services (SIC 1151).

### **1.3 Data items**

The following categories of data items were collected: general information, land use, field crops, horticultural crops, animals, employment, income, expenditure and details of purchases.

### **1.4 Reference period**

The questionnaires were completed for the financial year ended on any date between 1 March 2017 and 28 February 2018, according to the usual reporting schedule of the enterprise, with the following exceptions:

- Animals on farms as at 30 September 2018, and
- Employment as at 30 June 2018.

### **1.5 Current prices**

The rand values are at current prices.

### **1.6 Reliability of data**

The following are some of the likely sources of non-sampling errors: frame not up to date, wrong definitions and classification, phrasing of questions, non-response, processing and estimation. Every effort is made to minimise non-sampling errors by updating the frame, careful design of questionnaires, testing them with a sample of respondents, editing reported data and implementing efficient operating procedures. Non-sampling errors occur in both sample surveys and censuses.

### **1.7 Confidentiality**

According to section 17 of the Statistics Act, 1999 (Act No. 6 of 1999), completed questionnaires remain confidential to Statistics South Africa (Stats SA). Individual business information is never disclosed. Results are presented in aggregated form only.

The total number of farms/ farming units involved in the commercial agriculture industry in 2017 was 4 920. The largest proportion of farms was in mixed farming (1 946 farms or 39,5% of the total), followed by farming of animals (1 594 or 32,4%) and growing of cereals and other crops (1 157 or 23,5%).

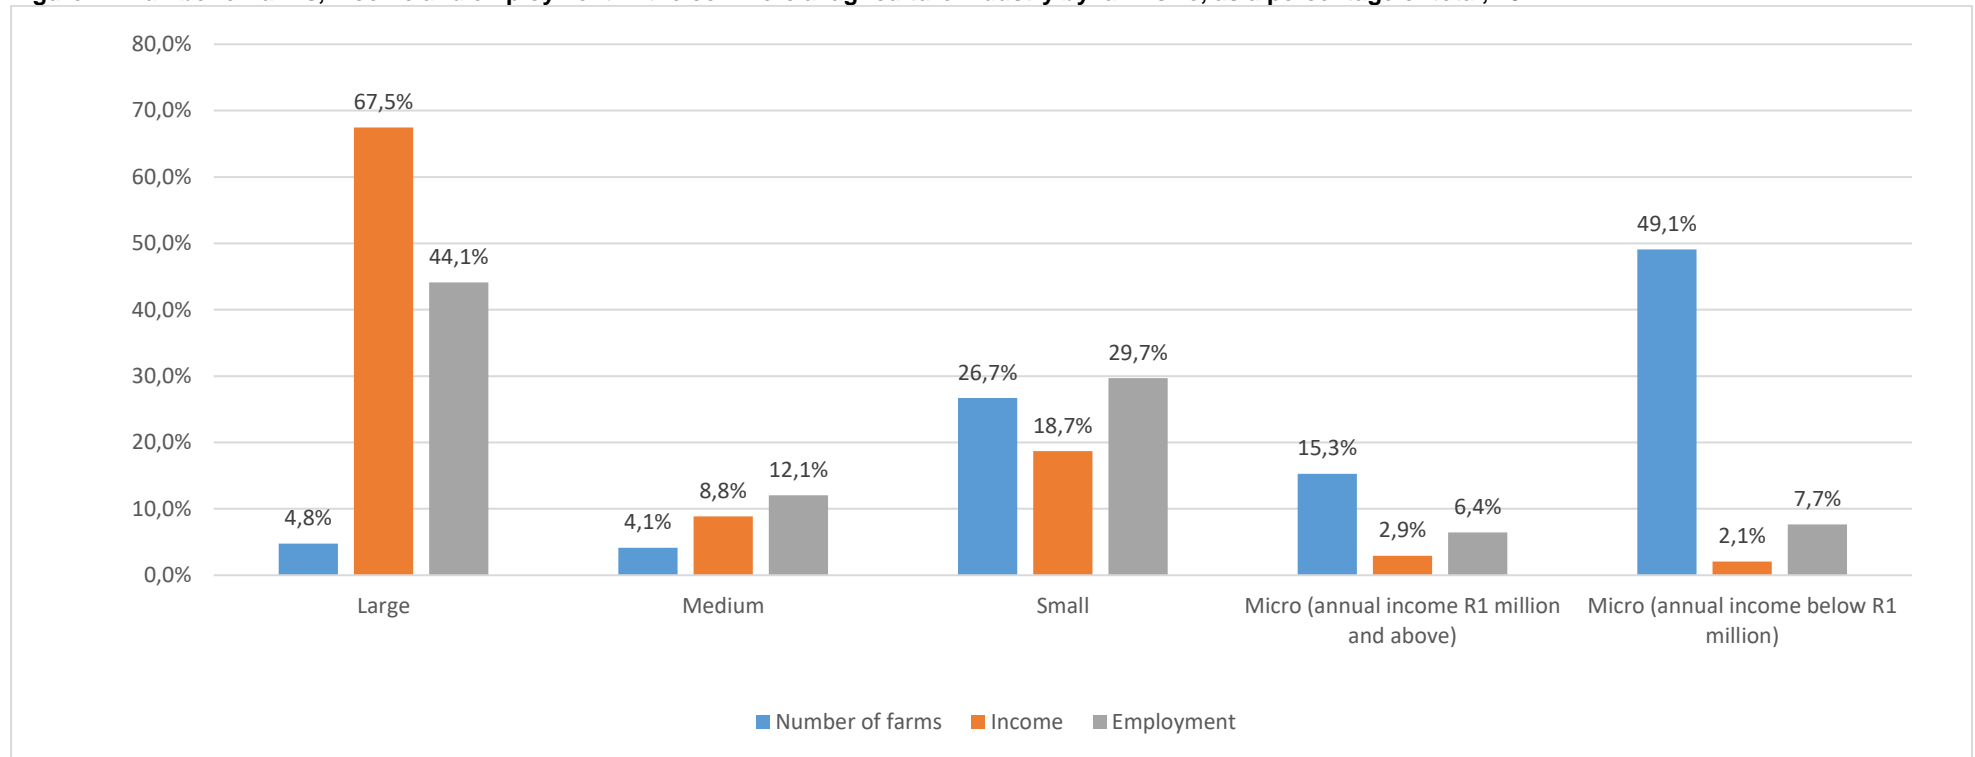

The district municipality with the highest number of farms in 2017 was Dr Ruth Segomotsi Mompati (1 442 farms or 29,3% of the provincial total), followed by Ngaka Modiri Molema (1 419 or 28,8%) and Dr Kenneth Kaunda (1 203 or 24,5%).

The total income for the commercial agriculture industry in 2017 was R39,7 billion, which was 298% higher than the R10,0 billion recorded for 2007. In 2017, the major contributor to total income was farming of animals (R21,6 billion or 54,3%), followed by mixed farming (R11,4 billion or 28,7%).

The district municipality contributing the most to total income in 2017 was Dr Kenneth Kaunda (R13,1 billion or 33,1%), followed by Dr Ruth Segomotsi Mompati (R10,2 billion or 25,6%) and Bojanala (R10,0 billion or 25,1%).

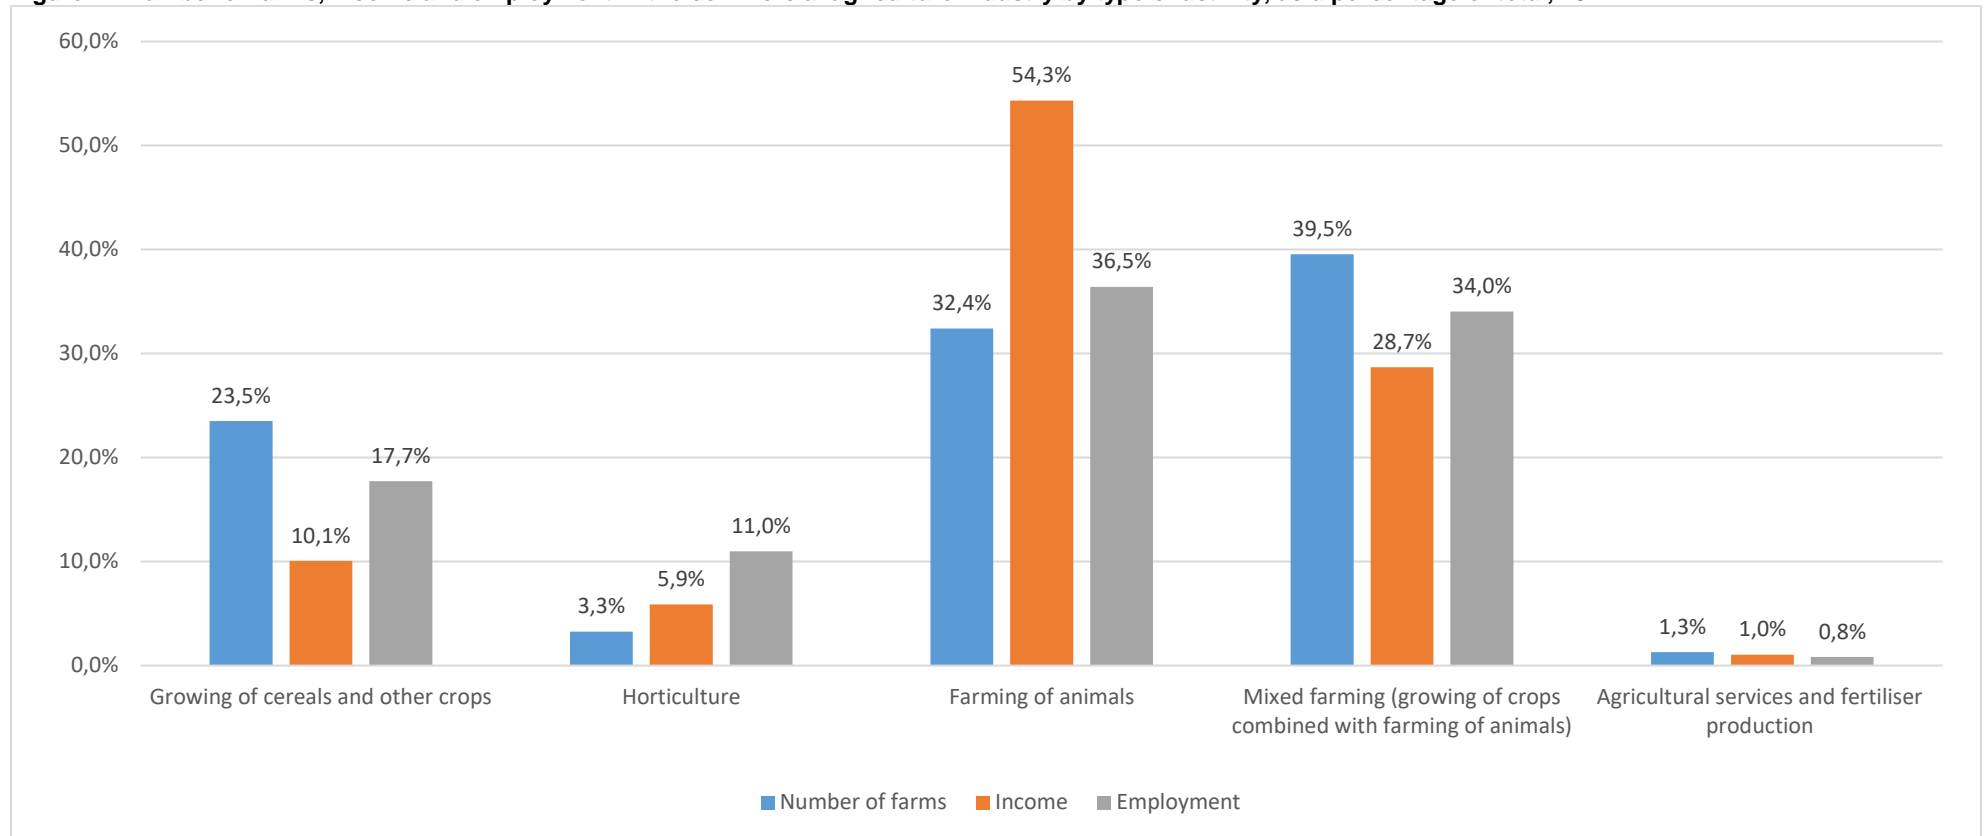

**Figure 1 - Number of farms, income and employment in the commercial agriculture industry by farm size, as a percentage of total, 2017**

In 2017, 235 large farms (those with annual income of more than R22,5 million) constituted 4,8% of the total number of farms in the commercial agriculture industry, and accounted for 67,5% of total income and 44,1% of total employment. This was in contrast to the 2 415 micro farms (annual income below R1 million) which made up 49,1% of the total number of farms, but which accounted for just 2,1% of total income and 7,7% of total employment. Taken together, there were 1 752 large, medium and small farms in 2017, with combined shares of 35,6% of the number of farms, 95,0% of income, and 85,9% of employment.

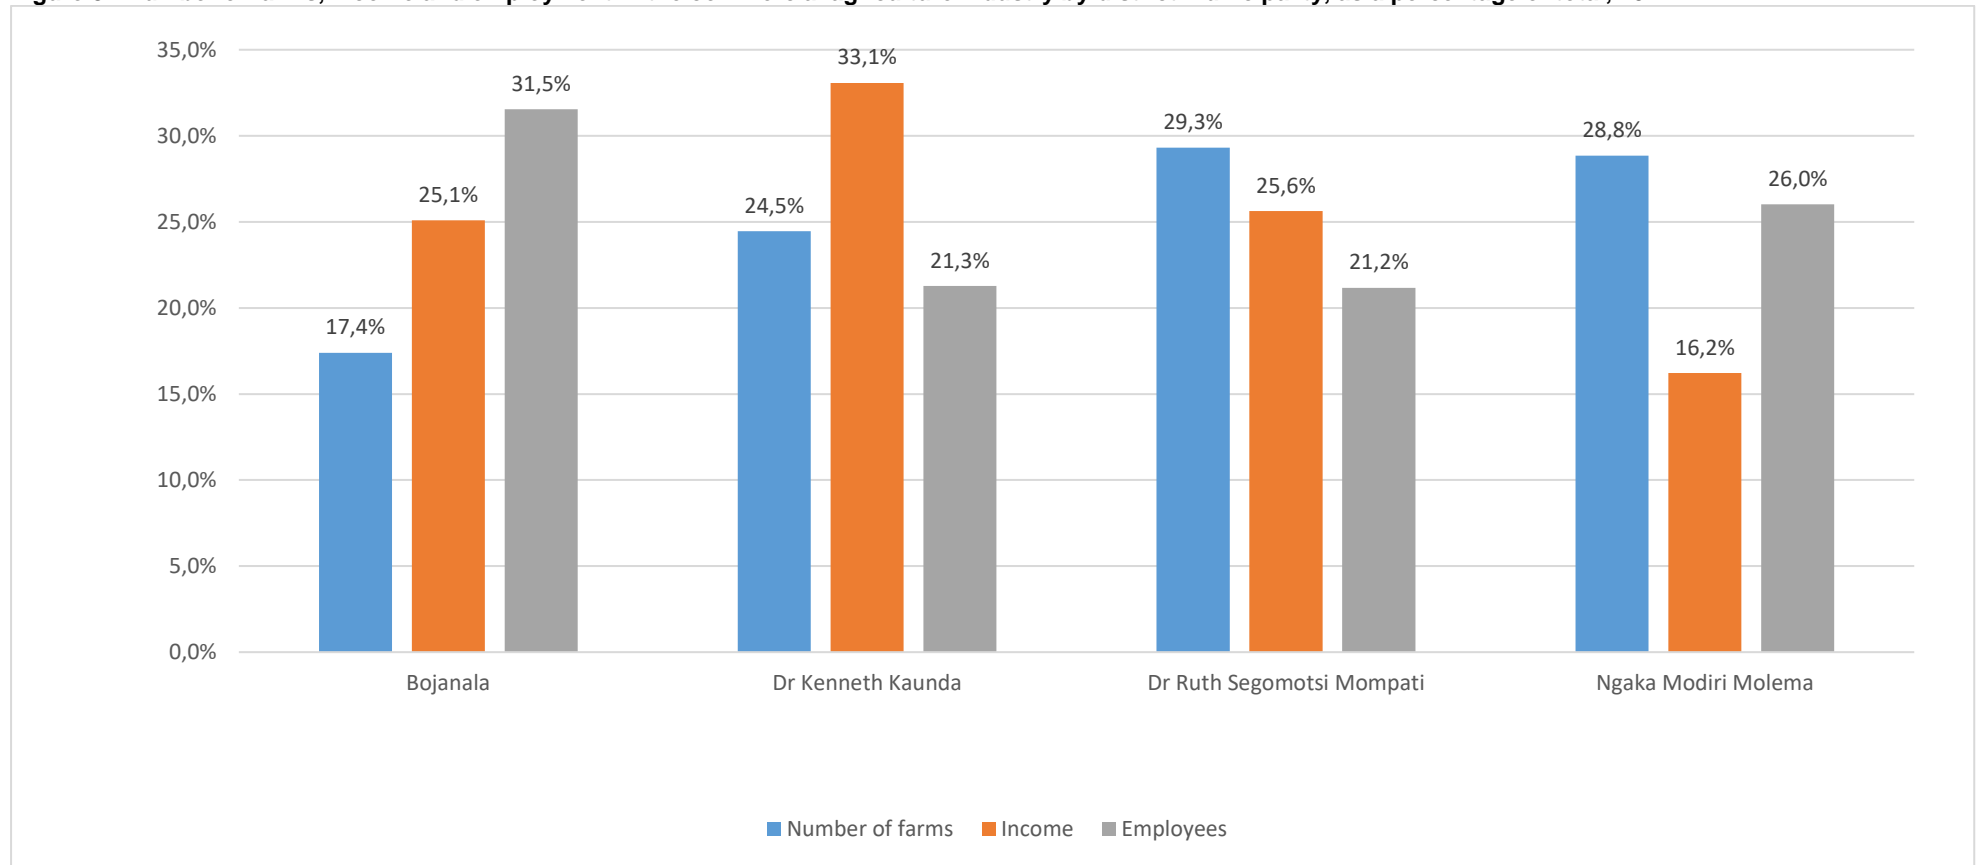

Measured by farm size, small farming units were the second largest in terms of number of farms, income and employment in 2017.

**Figure 2 - Number of farms, income and employment in the commercial agriculture industry by type of activity, as a percentage of total, 2017**

Farming of animals had the largest share of income (54,3%) and employment (36,5%) as well as the second largest share of number of farms (32,4%) in 2017. Mixed farming had the largest share of number of farms (39,5%) and the second largest share in income (28,7%) and employment (34,0%).

**Figure 3 - Number of farms, income and employment in the commercial agriculture industry by district municipality, as a percentage of total, 2017**

Of the total income of R39,7 billion in the commercial agriculture industry in 2017, R35,9 billion was derived directly from agricultural activities, which is herein referred to as gross farming income. The animals and animal products category was the biggest contributor to gross farming income with 72,3% of the provincial total, followed by field crop products (20,6%). Field crop products accounted for 52,2% of gross farming income in the Ngaka Modiri Molema district municipality, and animals and animal products accounted for 47,2%.

On 30 September 2018, the total land used for commercial agriculture in North West was 5,3 million hectares, which represents 50,8% of the total land area of North West (10,5 million hectares). Commercial agricultural land use in North West comprised mainly grazing land (3,5 million hectares) and arable land (1,1 million hectares). Grazing land is used for livestock and game farming, and arable land is used for crop production.

The Dr Ruth Segomotsi Mompati district (41,8%) accounted for the largest share of the North West's commercial agricultural land use, followed by Bojanala (23,6%) and Ngaka Modiri Molema (22,2%).

Regarding grazing land, 88,8% was located in three districts, namely Dr Ruth Segomotsi Mompati (55,7%), Ngaka Modiri Molema (17,8%) and Bojanala (15,3%). Ngaka Modiri Molema (48,5%), Dr Kenneth Kaunda (23,8%) and Dr Ruth Segomotsi Mompati (21,8%) accounted for 94,1% of arable land.

Field crops are important for food security, and they account for the largest portion of cultivated land in South Africa. In terms of area planted, the major field crops in North West in both 2007 and 2017 were maize, sunflower seeds, soya beans and groundnuts (peanuts). The major field crops, with the exception of groundnuts (peanuts), were mostly planted under dry land, i.e. their main source of water was rain. In 2017, sunflower seeds had the highest proportion (99,8% of sunflower seeds) planted under dry land, followed by maize (95,6%) and soya beans (76,1%).

Between 2007 and 2017, maize production increased by 6% (from 1,6 million to 1,7 million tons). This was driven by an increase in the volume of production per hectare from 2,7 to 3,7 tons. Ngaka Modiri Molema district produced 58,9% of maize in the province in 2017, followed by Dr Ruth Segomotsi Mompoti and Dr Kenneth Kaunda (each 18,0%).

Sunflower seed production increased by 79% (from 95 thousand to 170 thousand tons) between 2007 and 2017. Two districts accounted for 87,0% of the province's total in 2017, namely Ngaka Modiri Molema (69,6%) and Dr Ruth Segomotsi Mompoti (17,4%).

There was strong growth in soya beans between 2007 and 2017, namely 165% (from 12 thousand to 32 thousand tons), due to a large increase in area planted. The leading districts for soya production in 2017 were Ngaka Modiri Molema (42,3% of the province's total), Bojanala (33,0%) and Dr Ruth Segomotsi Mompoti (21,4%).

Groundnut production increased by 113% to 36 thousand tons in 2017. Two districts accounted for 91,4% of the province's total in 2017, namely Dr Ruth Segomotsi Mompoti (68,1%) and Ngaka Modiri Molema (23,3%).

## 2.4 Horticultural crops

### 2.4.1 Vegetables

**Table E - Vegetables: area planted and production, 2007 and 2017**

Commodity	Area planted in hectares		Production in metric tons	
	2007	2017	2007	2017
Potatoes	3 383	3 053	80 026	118 187
Onions	504	1 431	15 616	65 611
Carrots	707	1 277	11 305	55 531
Beetroot	747	1 931	9 830	56 301

The major vegetables in terms of production were potatoes, onions, carrots and beetroot. With the exception of potatoes, all major vegetables showed an increase in area planted.

**Explanatory notes****Background**

The results presented in this publication have been derived from the Census of Commercial Agriculture (CoCA), 2017 – North West. This publication summarises data on the size, structure and nature of the commercial agriculture industry.

The frame was drawn from Stats SA's business register. The business register is mainly based on the value added tax (VAT) database of the South African Revenue Service (SARS).

The last CoCA was conducted for the year 2007 (Report No. 11-02-07 (2007)).

**Value added tax (VAT)**

All figures exclude value added tax (VAT).

**Reference period**

The information was collected from enterprises for their financial year which ended on any date between 01 March 2018 and 28 February 2019.

**Statistical unit**

The statistical unit is an enterprise. An enterprise is a legal unit (or a combination of legal units) that includes and directly controls all functions necessary to carry out its production activities.

**Collection unit**

The collection unit is a farming unit. A farming unit consists of one or more farms, holdings or pieces of land, whether adjacent or not, operated as a single unit and situated within the same local municipality. Thus, an enterprise can have one or more farming units.

**Classification**

The 1993 edition of the Standard Industrial Classification of all Economic Activities (SIC), Fifth Edition, Report No. 09-09-02, was used to classify the statistical units in this census. The SIC is based on the third revision of the 1990 International Standard Industrial Classification of all Economic Activities (ISIC), with suitable adaptations for local conditions. Farming sectors included were classified to the five-digit (subgroup) level for the detailed results.

**Size groups**

The enterprises are divided into four size groups according to the value of turnover recorded for them on the Stats SA business register. Table H presents the cut-off points for size groups.

**Table H - Income size groups for the Census of Commercial Agriculture, 2017**

Size group	Income (annual)

**Survey methodology and design**

Initially, telephones were used to contact enterprises and update their information on the frame in terms of specific agriculture activity and location. Enterprises were given an option of either self-enumeration or a visit by a Stats SA official. CAPI (Computer Assisted Personal Interview), on both tablet and desktop, was used to conduct the interview and/or capture the data.

**Collection rate**

Collection rate = ((collected enterprises + finalised investigations) / sample size) \* 100. The collection rate was 76,9%.

<b>Turnover collection rate</b>	Turnover collection rate = $((\text{collected enterprises BR turnover} + \text{finalised investigations BR turnover}) / \text{population BR turnover}) * 100$ . The turnover collection rate was 88,9%.
<b>Revisions to 2007 results</b>	Revisions were made to previous results due to new information obtained after publication.
<b>Non-sampling errors</b>	Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in the collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to minimise non-sampling errors by updating the frame, careful design of questionnaires, testing them in pilot studies, editing reported data and implementing efficient operating procedures. Non-sampling errors occur in both sample surveys and censuses
<b>Unpublished data</b>	Where possible, Stats SA makes available unpublished statistics on request.
