# Tuition fees: which universities are likely to feel the pinch?

With the announcement of a zero fee increase for higher education institutions next year (2016), the focus is now on where the money will be sourced to finance the expected shortfall.

Recent data provide an indication of which universities are most dependent on tuition fees, and as a result might be most vulnerable to a shortfall.

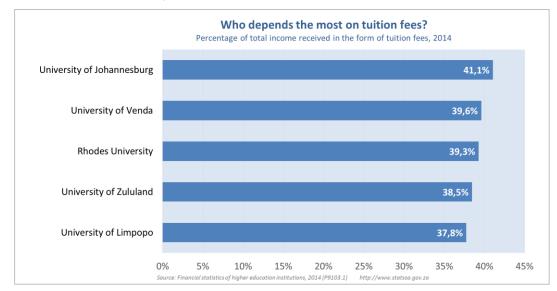

In 2014, tuition fees contributed 32% to the income of South Africa's 25 higher education institutions, according to data form Stats SA's latest *Financial* statistics of higher education institutions report.

The University of Johannesburg depended the most on tuition fees to finance its budget, with 41% of its total income sourced from students.

Second was University of Venda (40%), followed by Rhodes University (39%) and University of Zululand (38%).

The two newcomers to South Africa's tertiary education landscape, Sol Plaatje University and the University of Mpumalanga, recorded 3% and 2% respectively.
